Introduction

Alfred Marshall ("Principles of Economics" 21) gave his interpretation to the classical economists as ideally early and crude supply and demand theorists, with the demand side in its earlier stages of development. It is from this interpretation that the continuity debate emerged.

As Marshall indicates, the classical economics approach to the theory of value and distribution was different from that of the Marginalists. Whereas the Marginalists in their framework symmetrically treated profits and wages, the classical economists explained profits in terms of two data sets; real wage and production in progress. Profits are therefore considered as residual income.

Continuity vs. Discontinuity

The classical economists more specifically Ricardo and Smith were more interested in the laws that govern the capitalist system characterized by class structure: landowners, workers, and the growing class of capitalists. Under the classical, the theory of value was formulated to ascertain the dominating factors at work and assess their interaction.

For them matter cannot be created by man instead it can only be changed from one form or moved. Production of goods involves destruction and the actual cost of a commodity is reflected in terms of the commodity destroyed while in the process of its production.

The Neoclassical Economics (NEC) gained its prominence between 1880 and 1890. From this period onwards it remained largely static. Major writings of Alfred Marshall, Richard T. Ely and E.R.A Seligman were rewritten over a period of four decades with very few changes. Neoclassical economics in practice has evolved into a dismal science of choice with most of its choices bad.
