Engine Emissions George Springer, 2012-12-06 In recent years emissions from transportation engines have been studied widely because of the contribution of such engines to atmospheric pollution During this period the amounts of pollutants emitted the mechanism of their formation and means of controlling emissions have been investigated in industrial and government laboratories as well as at universities The results of these investigations have generally been published as individual articles in journals transactions meeting proceedings and frequently in company reports This proliferation of technical information makes it difficult for workers in the field to keep abreast of all developments For this reason the editors felt the need for a book which would survey the existing state of knowledge in wide albeit selected areas and would provide a guide to the relevant literature This book is intended to fulfill this function It is recognized that all aspects of transportation engine emissions cannot be explored in a single volume In this book attention is focused primarily on sources and mechanisms of emission formation within the combustion process and on measurement techniques Beyond this objective no restrictions were placed on the authors Within the framework of the general theme each author has been free to treat his subject as he saw fit The editors have not strived to replace by uniformity the highly personal and attractive divergences of style Considerable efforts were made however to ensure clarity and minimum overlap between the chapters *Commerce Business Daily*, 1998-05

Superintelligence Nick Bostrom,2014-07-02 The human brain has some capabilities that the brains of other animals lack It is to these distinctive capabilities that our species owes its dominant position Other animals have stronger muscles or sharper claws but we have cleverer brains If machine brains one day come to surpass human brains in general intelligence then this new superintelligence could become very powerful As the fate of the gorillas now depends more on us humans than on the gorillas themselves so the fate of our species then would come to depend on the actions of the machine superintelligence But we have one advantage we get to make the first move Will it be possible to construct a seed AI or otherwise to engineer initial conditions so as to make an intelligence explosion survivable How could one achieve a controlled detonation To get closer to an answer to this question we must make our way through a fascinating landscape of topics and considerations Read the book and learn about oracles genies singletons about boxing methods tripwires and mind crime about humanity s cosmic endowment and differential technological development indirect normativity instrumental

convergence whole brain emulation and technology couplings Malthusian economics and dystopian evolution artificial intelligence and biological cognitive enhancement and collective intelligence This profoundly ambitious and original book picks its way carefully through a vast tract of forbiddingly difficult intellectual terrain Yet the writing is so lucid that it somehow makes it all seem easy After an utterly engrossing journey that takes us to the frontiers of thinking about the human condition and the future of intelligent life we find in Nick Bostrom's work nothing less than a reconceptualization of the essential task of our time Congressional Record United States.
