

of involvement of other family members with the dying child and in the child's funeral.

Unfortunately, Dr. Köhler-Ross omits *On Death and Dying* to providing solutions to such practical problems. Although the solutions she offers are ample, by restricting her discussion to the practical level the author does not avail herself of an opportunity to offer an empirical study concerning the experience of dying children. Instead, we are presented with letters she received from families of deceased children as well as some personal anecdotes and vignettes. Dr. Köhler-Ross attaches to her discussion an extensive bibliography, yet she refrains from making use of it. We are left with Dr. Köhler-Ross' dispute with her medical colleagues.

Dr. Köhler-Ross proclaims her growing spiritual awareness. She feels that her colleagues' refusal to accept her reports of "out of body" experiences as objectively real is an example of medical arrogance. She compares her situation to that of the renowned martyr-innovator Ignaz Semmelweis, the nineteenth century Hungarian obstetrician whose views concerning the etiology and preventive measures for the control of puerperal fever were suppressed by his medical colleagues in Vienna. This suppression of a truth that was crucial for the well-being of patients was done in the face of empirical data. Eventually Semmelweis was forced to resign from the General Hospital of Vienna.

Dr. Köhler-Ross' case is very different from that of Semmelweis. In contrast to the latter, she has not provided us with empirical data to support her claims about out-of-body experiences. She may well be escapee from such a demand because her claims pertain to a domain lying beyond that of empirical science. In this case, however, her case is closed.

For us physicians, the case of the dying patient always remains open. He puts at our door the demand to develop respectful and empathic modes of help regardless of differences of belief.

Child Obesity: A New Frontier of Behavior Therapy, by Michael D. Leflow. New York: Springer, 1984. 256 pp., \$27.95.

In this book the author comprehensively reviews the available data on behavior therapy for obesity in children and adolescents. Two recurrent themes make this book rather discouraging for clinicians looking for effective regimens for significant weight loss in children. First, most of the work reported produces modest weight losses at best and much of the weight loss is regained by follow-up in many subjects. Second, for most studies described by Leflow, the data reported by the original authors are incomplete. For example, many studies do not report height or changes in height while weight loss is occurring, obviously an important factor in growing children; or there were multiple confounding variables, making interpretation of results difficult. These problems will not surprise clinicians who are familiar with the literature on treatment of obesity.

The book is divided into four sections. The first includes

two chapters in which obesity is defined and its epidemiology and natural history are reviewed. In chapter 1, the author notes that although it is difficult to define obesity in adults, it is even more difficult in children and adolescents. In chapter 2, he notes the many psychological problems experienced by obese children as well as the fact that 20% of obese infants become obese adults.

In the second section, behavioral treatment strategies are described in three chapters. In chapter 3, the various terms used to describe behavioral therapy techniques are defined (for example, negative reinforcement, positive reinforcement, extinction), as are certain general principles in the application of these techniques. Chapters 4 and 5 describe specific applications of behavioral techniques to the treatment of obese children. The concept and application of contracting, especially for controlling food intake, is described. There is a lengthy discussion of behavioral techniques designed to increase activity levels. For the practicing clinician, these two chapters are particularly useful.

The third section, composed of chapter 6, describes the obstacles that interfere with effective treatment. To conceptualize these obstacles, Leflow uses "a triangle of obesity"; the three points of the triangle are body measures (for example, height, weight, fat content, and glucose tolerance), behavioral measures (for example, eating and its vicinities), and energy measures (caloric intake and expenditure). Throughout the remainder of the book Leflow refers to the various points in this triangle and their effect on one another.

The final section recapitulates some of the obstacles described earlier by focusing on the treatment of adolescent obesity, which is best with the same problems as the treatment of child obesity. This section is completed by a chapter concerning current questions and future directions in the treatment of child obesity.

In summary, this book provides a complete and interesting review of the treatment of child obesity, with original and novel ideas for implementing certain behavioral strategies. It is not an easy book to read, but it is worth the effort.

Coping With Pediatric Illness, edited by Charles H. Hollingsworth, M.D. New York: SP Medical & Scientific Books, 1983. 259 pp., \$15.00.

This book, according to its editor, is intended to be a companion to another book, *Pediatric Consultation: Liaison Psychiatry*, also edited by this editor (1). This book encompasses 18 diverse topics written by experts in their fields, most of whom are affiliated with the University of California, Los Angeles. The subject matter ranges from pediatric psychopharmacology to research in high-risk infants.

The book begins with a comprehensive and informative chapter on the use of psychotropic medication in the pediatric population by Dennis F. Cantwell, M.D. This chapter gives a historical perspective of the development of pediatric psychopharmacology, followed by a discussion of principles regarding the use of psychotropic medication with children. Finally, the author offers his personal views on the use of medication with various specific disorders in child psychiatry. This chapter provides up-to-date information based on a review of current literature on the subject and the personal experience of one of the foremost leaders in child psychiatry.

Four somewhat interrelated topics are presented in the
