Coronary Blood Flow J.A. Spaan,2012-12-06 by JULIEN IE HOFFMAN One of the earliest coronary physiologists was Scaramucci who in 1695 postulated that during systole the contracting myocardium inhibited coronary blood flow Since then the many contributions that have been made to our knowledge of the coronary circulation can be arbitrarily divided into three phases based on advances in technical methods The early phase of research into the coronary circulation done with great difficulty with crude methods may be regarded as ending in the 1940s and it included major discoveries made by such well known investigators as Georg von Anrep Ernest Starling Carl Wiggers and Louis Katz who formulated much of our basic understanding of the field After 1940 the field of coronary physiology entered a new phase when instruments for high fidelity registration of coronary flow and pressure became available This era was dominated by Donald Gregg who combined careful attention to the function of these instruments some of which he helped to develop with an extraordinary ability to discern mechanisms from apparently minor changes in coronary flow and pressure patterns His book *The Coronary Circulation in Health and Disease* set a new standard in the field After 1960 techniques for measuring regional myocardial blood flow became available and enabled a large group of eminent investigators to make major advances in understanding the physiology and pathophysiology of myocardial blood flow

Biological Flows Colin G. Caro, M.Y. Jaffrin, 2013-12-19 Biomechanics has a distinguished history extending at least to the 16th Century However the later half of this century has seen an explosion of the field with it being viewed as offering exciting challenges for physical scientists and engineers interested in the life sciences and wonderful opportunities for life scientists eager to collaborate with physical scientists and engineers and to render their scientific work more fundamental That the field is now well established and expanding is demonstrated by the formation of a World Committee for Biomechanics and the success and large participation in the 1st and 2nd World Congresses of Biomechanics held respectively in San Diego in 1990 and in Amsterdam in 1994 With more than 1350 scientific papers delivered at the 2nd World Congress either within symposia or oral or poster sessions it would have been out of the question to try to produce comprehensive edited proceedings Moreover we are confident that most of the papers have been or will be published in one of the excellent journals covering the field But of effort contributed by the plenary lecturers and the tutorial we thought that the large amount and keynote speakers of various symposia deserved to be recognised in the form of a specific publication thus also allowing those unable to attend the presentations to share in the findings Furthermore we feel that there is now a need to review aspects of the field

Grossman's Cardiac Catheterization, Angiography, and Intervention Donald S. Baim, 2006 The premier reference on cardiac catheterization
