3g Mobile Networks:

Evolution of 3G Networks Gottfried Punz, 2009-12-16 In this chapter we describe the motivation for writing this book and explain its scope. Some remarks on nomenclature are given in order to help the reader with a fast and easy start. The concept and structure of the material compiled is presented followed by some hints on how to make best use of it. Finally the status of standardization on which this book is based is described.

1.1 Motivation Probably the main motivation for starting to draft the script for this book and eventually to finish it was the desire to have a more or less complete up to date overview of mobile network technology for myself not only when starting my work in 3GPP standardization but also continuously afterwards I realized that some of my colleagues were in search of the same and I extrapolated to the point where after 3G technology is in the field for some time the huge new step of development would be implemented and finally exist in reality. A manifold of system designers, SW engineers, solution consultants, test personnel, field technicians and service staff would have to deal with the underlying architecture concepts and detailed procedures. Yet I noticed in my roughly two decades of work as an engineer in a few diverse fields that compact consistent and balanced overview material suitable for the wider audience is scarce.

Recent Trends in Wireless and Mobile Networks Abdulkadir Özcan, Nabendu Chaki, Dhinaharan Nagamalai, 2010-06-17 The International Conference on Wireless and Mobile networks WiMo aims to bring together innovative ideas and new research trends in wireless and mobile networks. Wireless networks are the best inventions in history. Wireless networking gives you a cheap and easy way to share one Internet connection between multiple computers eliminating the need for more than one modem. You can even add new computers to your network simply by plugging in a wireless card and switching them on they have an Internet connection straight away. There aren't many wired networks that can say that. This conference is dedicated to addressing the challenges in the areas of wireless and mobile networks. It looks for significant contributions to wireless and mobile computing in theoretical and practical aspects. The wireless and mobile computing domain emerges from integrating personal computing networks, communication technologies, cellular technology and Internet technology. Modern applications are emerging in the area of mobile ad hoc networks and sensor networks. WiMo 2010 intended to cover contributions in both design and analysis in the context of mobile wireless ad hoc and sensor networks. The goal of the conference was to bring together researchers and practitioners from academia and industry to focus on advanced wireless and mobile computing concepts and establish new collaborations in these areas.

Traffic Analysis and Design of Wireless IP Networks Toni Janevski, 2003 Here we have a unique new book that focuses on the future direction in wireless mobile telecommunications as a standalone concept for building wireless IP systems including commercial campus local and global networks. It examines the integration of the Internet and mobile networks which are merging as a result of global demand for seamless mobile communication.
