Ian L. McHarg, 2006-11-13 A concise illuminating collection of essential essays from one of the pioneers of the field of landscape architecture *Design in Nature* Claus Mattheck, 2012-12-06 The chicken bone you nibbled yesterday and threw away was a high tech product Not only that it was a superlative light weight design functionally adapted to its mechanical requirements No engineer in the world has as yet been able to copy this structural member which is excellently optimized in its external shape and its internal architecture as regards minimum weight and maximum strength The tree stem on which you recently carved your initials has also by life long care for its body steadily improved its internal and external structure and adapted optimally to new loads In the course of its biomechanical self optimization it will heal up the notch you cut as speedily as possible in order to repair even the smallest weak point which might otherwise cost it its life in the next storm This book is dedicated to the understanding of this biomechanical optimization of shape It is the synthesis of many years of extensive research using the latest computer methods at the Karlsruhe Research Centre to help understand the mechanism of biological self optimization adaptive growth and to simulate it by computer The method newly developed for this purpose was called CAO Computer Aided Optimization With this method it is possible to predict the growth of trees bones and other biological structures from the tiger's claw to the sea urchin's skeleton **Nature-Based Design in Landscape**
