Accounting Information Systems Understanding Business Processes is the fourth edition of the leading local textbook available to students who are required to study a subject on accounting information systems. A well established and widely used textbook, the new edition continues to detail the important role of accounting and information systems in business. As students of accounting are required to possess a firm understanding of accounting information systems and how they impact upon various core business processes, the text explores the business processes that are central to many organisations and explains the many issues associated with accounting information systems.

Accounting Information Systems Dasaratha V. Rama, Frederick L. Jones, 2005. The purpose of this text is to help students develop a strong conceptual foundation in accounting information systems (AIS) that can serve as a basis for lifelong learning. The text's approach has emerged from the author's extensive experience gained through teaching the AIS course at multiple institutions. This text is a flexible resource that can be adapted to meet the varying needs of different students, faculty, and institutions. Using a business process approach, this text provides a strong conceptual foundation in accounting systems and controls, enables students to use this foundation in developing and evaluating accounting applications and in problem solving, and presents information in a way that facilitates student learning. Throughout the text, the authors emphasize the relevance of the content to accountants and the roles they play as designer, user, and evaluator of information systems. The text provides numerous problem-solving aids to help students develop skills in documenting and analyzing transaction cycles and AIS data, identifying risks and controls using accounting applications, and designing and evaluating AIS. A set of core cases used throughout the text for illustration and assignments assists integration. A comprehensive case at the end of the text gives students further opportunity to demonstrate understanding. A supplement is available to help students learn how a relational database (MS Access) can be used to implement an AIS.
