

Introduction to Dental Tissues

Chapter 1

Zohaib Khurshid, Sana Zohaib, Shariq Najeem and Sohail Zafar

THE TOOTH

Teeth constitute approximately 20% of the surface area of the mouth, the upper teeth significantly more than the lower teeth. Teeth serve several functions. Mastication is the function mostly commonly associated with human dentition, but teeth also are essential for proper speech.

The tooth proper consists of hard, inert, acellular enamel formed by epithelial cells and supported by the less mineralized, more resilient, and vital hard connective tissue dentin, which is formed and supported by the dental pulp, a soft connective tissue (Fig. 1.1).

The face and jaws of a child are small and consequently can carry few teeth of smaller size. These smaller teeth constitute the deciduous or primary dentition. The deciduous dentition replaced by a permanent or secondary dentition consisting of more and larger teeth.

Anatomically, a tooth consists of a crown and a root (Fig. 1.2); the junction between the two is the cervical margin. The term *clinical crown* denotes the part of the tooth that is visible in the oral cavity.

Enamel

Development

Enamel has evolved as an epithelially derived protective covering for the crown of the teeth. The cells responsible for the formation of enamel, the ameloblasts, cover the entire surface of the layer as it forms but are lost as the tooth emerges into the oral cavity. The loss of these

cells renders enamel a non-vital and insensitive matrix that, when destroyed by any means (usually wear or caries), cannot be replaced or regenerated.

Composition

The enamel is the most highly mineralized tissue in the body, consisting of more than 96% inorganic material in the form of appetite crystals and traces of organic material.

Features

The structural and compositional features allow enamel to withstand large masticatory forces and continual assaults by acids from food and bacterial

Dental and Oral Tissues Letty Moss-Salentijn, Marlene Hendricks-Klyvert, 1990-01-01 **Dental and Oral Tissues** Letty Moss-Salentijn, Marlene Hendricks-Klyvert, 1980 **Anatomy for Dental Students** Martin E. Atkinson, 2013-03-14

Anatomy for Dental Students Fourth Edition demonstrates and explains all the anatomy needed for a modern dentistry undergraduate course. This text covers developmental anatomy, the thorax, the central nervous system, and the head and neck, with an emphasis on the practical application of anatomical knowledge. This new edition has been extensively revised and updated in line with contemporary teaching and dental practice. Over 300 new full colour diagrams map all the anatomical regions that dental students need to know, while the lively and accessible text guides the reader's learning. Throughout Clinical Application Boxes demonstrate how the form and function of anatomy have consequences for clinical practice. Side line boxes contain additional descriptions for key anatomical structures. This text is supported by an Online Resource Centre with multiple choice questions, drag and drop figure exercises, and links to key resources to help readers to consolidate and extend their knowledge of anatomy. Anatomy for Dental Students brings together anatomical structure, function, and their relationship to clinical practice, making it ideal for today's dental students. *UCSF General Catalog* University of California, San Francisco, 1972 **Fundamentals of Inflammation** Charles N. Serhan, Peter A. Ward, Derek W. Gilroy, 2010-04-26

The acute inflammatory response is the body's first system of alarm signals that are directed toward containment and elimination of microbial invaders. Uncontrolled inflammation has emerged as a pathophysiologic basis for many widely occurring diseases in the general population that were not initially known to be linked to the inflammatory response, including cardiovascular disease, asthma, arthritis, and cancer. To better manage treatment, diagnosis, and prevention of these wide-ranging diseases, multidisciplinary research efforts are underway in both academic and industry settings. This book provides an introduction to the cell types, chemical mediators, and general mechanisms of the host's first response to invasion. World-class experts from institutions around the world have written chapters for this introductory text. The text is presented as an introductory springboard for graduate students, medical scientists, and researchers from other disciplines wishing to gain an appreciation and working knowledge of current cellular and molecular mechanisms fundamental to inflammation. *Announcement of the School of Dentistry* University of California, San Francisco.
