Certain Zeta Functions Attached to Automorphic Forms Over Imaginary Quadratic Fields Yude Zhao,1992

Automorphic Forms and Geometry of Arithmetic Varieties K. Hashimoto,Y. Namikawa,2014-07-14 Automorphic Forms and Geometry of Arithmetic Varieties deals with the dimension formulas of various automorphic forms and the geometry of arithmetic varieties The relation between two fundamental methods of obtaining dimension formulas for cusp forms the Selberg trace formula and the index theorem Riemann Roch s theorem and the Lefschetz fixed point formula is examined Comprised of 18 sections this volume begins by discussing zeta functions associated with cones and their special values followed by an analysis of cusps on Hilbert modular varieties and values of L functions The reader is then introduced to the dimension formula of Siegel modular forms the graded rings of modular forms in several variables and Selberg Ihara s zeta function for p adic discrete groups Subsequent chapters focus on zeta functions of finite graphs and representations of p adic groups invariants and Hodge cycles T complexes and Ogata s zeta zero values and the structure of the icosahedral modular group This book will be a useful resource for mathematicians and students of mathematics

Automorphic Forms and Related Zeta Functions,2015

Introduction to the Arithmetic Theory of Automorphic Functions Gorō Shimura,1971-08-21 The theory of automorphic forms is playing increasingly important roles in several branches of mathematics even in physics and is almost ubiquitous in number theory This book introduces the reader to the subject and in particular to elliptic modular forms with emphasis on their number theoretical aspects After two chapters geared toward elementary levels there follows a detailed treatment of the theory of Hecke operators which associate zeta functions to modular forms At a more advanced level complex multiplication of elliptic curves and abelian varieties is discussed The main question is the construction of abelian extensions of certain algebraic number fields which is traditionally called Hilbert s twelfth problem Another advanced topic is the determination of the zeta function of an algebraic curve uniformized by modular functions which supplies an indispensable background for the recent proof of Fermat s last theorem by Wiles

Automorphic Forms and Representations Daniel Bump,1998-11-28 This book takes advanced graduate students from the foundations to topics on the research frontier

L-Functions and Automorphic Forms Jan Hendrik Bruinier,Winfried Kohnen,2018-02-22 This book presents a collection of carefully refereed research articles and lecture notes stemming from the Conference Automorphic Forms and L Functions held at the University of Heidelberg in 2016 The theory of automorphic forms and their associated L functions is one of the central research areas in modern number theory linking number theory arithmetic geometry representation theory and complex analysis in many profound ways The 19 papers cover a wide range of topics within the scope of the conference including automorphic L functions and their special values p adic modular forms Eisenstein series Borcherds products automorphic periods and many more

Representation Theory and Automorphic Forms T. N. Bailey,Anthony W.

Knapp,1997 The lectures from a course in the representation theory of semi simple groups automorphic forms and the relations between them The purpose is to help analysts make systematic use of Lie groups in work on harmonic analysis differential equations and mathematical physics and to provide number theorists with the representation theoretic input to Wiles s proof of Fermat s Last Theorem Begins with an introductory treatment of structure theory and ends with the current status of functionality Annotation copyrighted by Book News Inc Portland OR **Researches on Automorphic Forms and Zeta Functions**

Yumiko Hironaka,1997 *Introduction to Siegel Modular Forms and Dirichlet Series* Anatoli

Andrianov,2010-03-17 Several years ago I was invited to an American university to give one term graduate course on Siegel modular forms Hecke operators and related zeta functions The idea to present in a concise but basically complete and self contained form an int duction to an important and developing area based partly on my own work attracted me I accepted the invitation and started to prepare the course Unfortunately the visit was not realized But the idea of such a course continued to be alive till after a number of years this book was nally completed I hope that this short book will serve to attract young researchers to this beautiful eld and that it will simplify and make more pleasant the initial steps No special knowledge is presupposed for reading this book beyond standard courses in algebra and calculus one and several variables although some skill in working with mathematical texts would be helpful The reader will judge whether the result was worth the effort

Dedications The ideas of Goro Shimura exerted a deep in uence on the number theory of the second half of the twentieth century in general and on the author s formation in particular When Andre Weil was signing a copy of his Basic Number Theory to my son he wrote in Russian To Fedor Anatolievich hoping that he will become a number theoretist Fedor has chosen computer science Now I pass on the idea to Fedor s daughter Alexandra Fedorovna *Multiple Dirichlet Series, Automorphic Forms, and Analytic Number Theory*

Solomon Friedberg,2006 Multiple Dirichlet series are Dirichlet series in several complex variables A multiple Dirichlet series is said to be perfect if it satisfies a finite group of functional equations and has meromorphic continuation everywhere The earliest examples came from Mellin transforms of metaplectic Eisenstein series and have been intensively studied over the last twenty years More recently many other examples have been discovered and it appears that all the classical theorems on moments of L functions as well as the conjectures such as those predicted by random matrix theory can now be obtained via the theory of multiple Dirichlet series Furthermore new results not obtainable by other methods are just coming to light This volume offers an account of some of the major research to date and the opportunities for the future It includes an exposition of the main results in the theory of multiple Dirichlet series and papers on moments of zeta and L functions on new examples of multiple Dirichlet *Arithmeticity in the Theory of Automorphic Forms*

Goro Shimura,2000 Written by one of the leading experts venerable grandmasters and most active contributors ldots in the arithmetic theory of automorphic forms ldots the new material included here is mainly the outcome of his extensive work ldots over the last eight years ldots a very careful detailed introduction to the subject ldots this monograph is an

important comprehensively written and profound treatise on some recent achievements in the theory Zentralblatt MATH The main objects of study in this book are Eisenstein series and zeta functions associated with Hecke eigenforms on symplectic and unitary groups After preliminaries including a section Notation and Terminology the first part of the book deals with automorphic forms on such groups In particular their rationality over a number field is defined and discussed in connection with the group action also the reciprocity law for the values of automorphic functions at CM points is proved Next certain differential operators that raise the weight are investigated in higher dimension The notion of nearly holomorphic functions is introduced and their arithmeticity is defined As applications of these the arithmeticity of the critical values of zeta functions and Eisenstein series is proved Though the arithmeticity is given as the ultimate main result the book discusses many basic problems that arise in number theoretical investigations of automorphic forms but that cannot be found in expository forms Examples of this include the space of automorphic forms spanned by cusp forms and certain Eisenstein series transformation formulas of theta series estimate of the Fourier coefficients of modular forms and modular forms of half integral weight All these are treated in higher dimensional cases The volume concludes with an Appendix and an Index The book will be of interest to graduate students and researchers in the field of zeta functions and modular forms

Automorphic Forms and Galois Representations: Volume 1 Fred Diamond, Payman L. Kassaei, Minhyong Kim, 2014-10-16 Automorphic forms and Galois representations have played a central role in the development of modern number theory with the former coming to prominence via the celebrated Langlands program and Wiles proof of Fermat's Last Theorem This two volume collection arose from the 94th LMS EPSRC Durham Symposium on Automorphic Forms and Galois Representations in July 2011 the aim of which was to explore recent developments in this area The expository articles and research papers across the two volumes reflect recent interest in p -adic methods in number theory and representation theory as well as recent progress on topics from anabelian geometry to p -adic Hodge theory and the Langlands program The topics covered in volume one include the Shafarevich Conjecture effective local Langlands correspondence p -adic L functions the fundamental lemma and other topics of contemporary interest

Automorphic Forms Beyond GL_2 Ellen Elizabeth Eischen, Wee Teck Gan, Aaron Pollack, Zhiwei Yun, 2024-03-26 The Langlands program has been a very active and central field in mathematics ever since its conception over 50 years ago It connects number theory representation theory and arithmetic geometry and other fields in a profound way There are nevertheless very few expository accounts beyond the GL_2 case This book features expository accounts of several topics on automorphic forms on higher rank groups including rationality questions on unitary group theta lifts and their applications to Arthur's conjectures quaternionic modular forms and automorphic forms over function fields and their applications to inverse Galois problems It is based on the lecture notes prepared for the twenty fifth Arizona Winter School on Automorphic Forms beyond GL_2 held March 5-9 2022 at the University of Arizona in Tucson The speakers were Ellen Eischen Wee Teck Gan Aaron Pollack and Zhiwei Yun The exposition of the book is in a style accessible

to students entering the field Advanced graduate students as well as researchers will find this a valuable introduction to various important and very active research areas
