Contemporary Theory Of Par Diff Equ:

Basic Modern Theory of Linear Complex Analytic q -Difference Equations Jacques Sauloy, 2024-11-06 The roots of the modern theories of differential and q difference equations go back in part to an article by George D Birkhoff published in 1913 dealing with the three sister theories of differential difference and q difference equations This book is about q difference equations and focuses on techniques inspired by differential equations in line with Birkhoff's work as revived over the last three decades It follows the approach of the Ramis school mixing algebraic and analytic methods While it uses some q calculus and is illustrated by q special functions these are not its main subjects After a gentle historical introduction with emphasis on mathematics and a thorough study of basic problems such as elementary q functions elementary q calculus and low order equations a detailed algebraic and analytic study of scalar equations is followed by the usual process of transforming them into systems and back again The structural algebraic and analytic properties of systems are then described using q difference modules Newton polygon filtration by the slopes The final chapters deal with Fuchsian and irregular equations and systems including their resolution classification Riemann Hilbert correspondence and Galois theory Nine appendices complete the book and aim to help the reader by providing some fundamental yet not universally taught facts There are 535 exercises of various styles and levels of difficulty The main prerequisites are general algebra and analysis as taught in the first three years of university The book will be of interest to expert and non expert researchers as well as graduate students in mathematics and physics

Modern Aspects of the Theory of Partial Differential Equations

Integral Geometry and Convolution Equations

V.V. Volchkov, 2012-12-06 Integral geometry deals with the problem of determining functions by their integrals over given families of sets These integrals define the corresponding integral transform and one of the main questions in integral geometry asks when this transform is injective On the other hand when we work with complex measures or forms operators appear whose kernels are non trivial but which describe important classes of functions Most of the questions arising here relate in one way or another to the convolution equations Some of the well known publications in this field include the works by J Radon F John J Delsarte L Zalcman C A Berenstein M L Agranovsky and recent monographs by L Hormander and S Helgason Until recently research in

this area was carried out mostly using the technique of the Fourier transform and corresponding methods of complex analysis In recent years the present author has worked out an essentially different methodology based on the description of various function spaces in terms of expansions in special functions which has enabled him to establish best possible results in several well known problems

Analysis of Singularities for Partial Differential Equations Shuxing Chen, 2011 The book provides a comprehensive overview on the theory on analysis of singularities for partial differential equations PDEs It contains a summarization of the formation development and main results on this topic Some of the author's discoveries and original contributions are also included such as the propagation of singularities of solutions to nonlinear equations singularity index and formation of shocks

Modern Mathematics for the Engineer: First Series Edwin F. Beckenbach, 2013-09-03 This volume and its successor focus on material relevant to solving mathematical problems regularly confronted by engineers Volume One's three part treatment covers mathematical models probabilistic problems and computational considerations 1956 edition

Modern Methods in Partial Differential Equations Martin Schechter, 2014-01-15 When first published in 1977 this volume made recent accomplishments in its field available to advanced undergraduates and beginning graduate students of mathematics Now it remains a permanent much cited contribution to the ever expanding literature

Front Tracking for Hyperbolic Conservation Laws Helge Holden, Nils Henrik Risebro, 2015-12-10 This is the second edition of a well received book providing the fundamentals of the theory hyperbolic conservation laws Several chapters have been rewritten new material has been added in particular a chapter on space dependent flux functions and the detailed solution of the Riemann problem for the Euler equations Hyperbolic conservation laws are central in the theory of nonlinear partial differential equations and in science and technology The reader is given a self contained presentation using front tracking which is also a numerical method The multidimensional scalar case and the case of systems on the line are treated in detail A chapter on finite differences is included From the reviews of the first edition It is already one of the few best digests on this topic The present book is an excellent compromise between theory and practice Students will appreciate the lively and accurate style D Serre MathSciNet I have read the book with great pleasure and I can recommend it to experts as well as students It can also be used for reliable and very exciting basis for a one semester graduate course S Noelle Book review German Math Soc Making it an ideal first book for the theory of nonlinear partial differential equations an excellent reference for a graduate course on nonlinear conservation laws M Laforest Comp Phys Comm
