The Metabolic Syndrome and Obesity George A. Bray, 2008-01-23 Thirty years ago I published my first monograph on obesity Bray 1976 Many things have changed in these 30 years but many have remained the same Preparation of The Metabolic Syndrome and Obesity has given me a chance to survey the changes to the field and to present an update of the scientific information In retrospect I conclude that a major component of the current epidemic of overweight is not medical not genetic not psychological and will not be effectively treated by lifestyle changes that require individual choices We are all influenced by the prices of the goods we buy With the reduction in food prices and distortion of commercially profitable products resulting from federal subsidies of corn sugar and rice the food industry has been able to produce cheap good tasting energy dense foods and can sell them cheaply in large portion sizes In contrast foods like fruits and vegetables receive little in the way of subsidies and are thus more expensive thus we buy less Providing more healthy food alternatives as some advocate will put items with higher costs on the shelves and is in my view unlikely to alter consumer choices as long as good tasting energy dense foods remain cheap

HISTORICAL CONTEXT FOR OBESITY Obesity was already a problem before my first monograph was published Between the writing of that monograph and The Metabolic Syndrome and Obesity I was fortunate enough to find a short book in French written by an American from Cincinnati named Worthington

Nutrition Research at the Leading Edge Russell E. Cassady, Erma I. Tidswell, 2008 Nutraceuticals are established food components widely consumed as supplements to the diet either as formulated products

or for fortification of foods particularly functional foods Over the last two decades there has been a steady growth in research into the possible health benefits Both the general public and the media have become increasingly interested and this has coincided with a general interest in health issues This has resulted in increasing usage of commercially available products as well as their food sources It is now well understood that modern pharmaceuticals cannot successfully treat all diseases coupled with their lack of effectiveness in certain disease states and the possibility of marked side effects There is logical use of a number of nutraceuticals which are endogenous nutrients from a range of food sources as many diseases maybe caused by deficiency states

Killer Diseases, Modern-Day Epidemics Swarna Moldanado, PhD, MPH,Alex Moldanado, MD,2017-08-22 In the past 100 years the average lifespan in the United States alone has increased by nearly thirty years However the years gained are being plagued by non infectious killer chronic diseases in epidemic proportions that are increasingly contributing to poor health and premature death in later years Americans may be squandering the longevity they gained in the twentieth century by succumbing in the twenty first century to these preventable killer chronic diseases largely attributable to dietary and lifestyle choices The prevalence of chronic diseases such as heart disease type 2 diabetes cancer and obesity along with the steadily rising human and economic costs surrounding them have spurred research into the causes and risk factors of these diseases for several decades Researchers have been able to establish evidence based links between an increased risk for these chronic diseases and exposure to certain environmental lifestyle and genetic factors In this book the authors explore the evidence based

connection between lifestyle choices and these killer chronic diseases providing insight into choices that will hold the disease at bay and effective use of recommended preventative services for early detection and intervention Available evidence unequivocally points to the fact that chronic diseases strike people with a particular set of lifestyle choices more often than they affect others who do not make those choices Adopting healthier choices at any age and stage of disease progression has proportional benefits This lifestyle disease connection makes it possible to not only prevent a chronic disease from setting in but also to stop it in its tracks when detected early and sometimes even reverse it Finally the case examples contributed by the authors bring to life the connection between a person s lifestyle choices exposure to modifiable and nonmodifiable risks and ultimately the development progression and outcome of a chronic disease based on lifestyle related risk exposure
