The view presented here is that of a convinced dualist who challenges in a lively and humorous way the prevailing materialist doctrines of many recent works. jacket **Worlding the Brain** ,2023-09-29 Moving beyond the neurohype of recent decades this book introduces the concept of worlding as a new way to understand the inherent entanglement of brains minds with their worldly environments cultural practices and social contexts Case studies ranging from film literature music and dance to pedagogy historical trauma and present day discourses of mindfulness investigate how brains are worlded in an active interplay of biological cognitive and socio discursive factors Combining scholarly work with personal accounts of neurodiversity and essays by artists reflecting on their practical engagement with cognition Worlding the Brain makes a case for the distinctive role of the humanities and arts in the study of brains and cognition and explores novel forms interdisciplinarity *Neurowaves* Georg Northoff,2023-05-15 The connection of the brain to the mind remains one of the most persistent mysteries in philosophy and neuroscience Georg Northoff proposes a new approach to the so called mind body problem drawing on an insight from physics time structures all objects and events in the world and all objects and events are in dynamic relationship This also shapes the brain as it is part of the dynamic of the world as whole In *Neurowaves* Northoff posits that the entire world is structured by waves of time and argues that the passing of these waves through our brains neurowaves produces mental experience The brain s neural waves transform into mental waves time and its dynamics are shared by brain and mind as their common currency As in physics and biology that radically changes our view Copernicus showed how the earth moves and that its movements are just a tiny part of the universe s passage of time Darwin showed that the human species is one among many species passing through evolution s timescales Northoff calls for another Copernican revolution replacing the mind body problem with questions about the temporal dynamic relationship between brain and world Illustrated with vivid examples from different facets of the physical and biological world *Neurowaves* provides captivating insights and an innovative entertaining unravelling of the temporal connection of brain and mind **What Should We Do with Our Brain?** Catherine Malabou,2009-08-25 Recent neuroscience in replacing the old model of the brain as a single centralized source of control has emphasized plasticity the quality by which our brains develop and change throughout the course of our lives Our brains exist as historical products developing in interaction with themselves and with their surroundings Hence there is a thin line between the organization of the nervous system and the political and social organization that both conditions and is conditioned by human experience Looking carefully at contemporary neuroscience it is hard not to notice that the new way of talking about the brain mirrors the management discourse of the neo liberal capitalist world in which we now live with its talk of decentralization networks and flexibility Consciously or unconsciously science cannot but echo the world in which it takes place In the neo liberal world plasticity can be equated with flexibility a term that has become a buzzword in economics and management theory The plastic brain would thus represent just another style of power which although less centralized is still a means of control In this book Catherine Malabou develops a second more radical meaning for plasticity Not only does plasticity allow our brains to adapt to existing circumstances it opens a margin of freedom to

intervene to change those very circumstances Such an understanding opens up a newly transformative aspect of the neurosciences In insisting on this proximity between the neurosciences and the social sciences Malabou applies to the brain Marx s well known phrase about history people make their own brains but they do not know it This book is a summons to such knowledge **50 Human Brain Ideas You Really Need to Know** Moheb Costandi,2025-07-03 Master the ideas central to understanding the human brain In a series of 50 accessible essays Mo Costandi introduces and explains all we know about the brain and how it works outlining both long standing theories and cutting edge ideas From the function of neurons and synaptic transmission to the nervous system and personality 50 Human Brain Ideas You Really Need to Know is a complete introduction to the most powerful and mysterious organ in the body Lean Brain Management Gunter Dueck,2008-03-15 Intelligence is wasted on problems that themselves have been caused by an excess of intelligence Lean Brain Management strives toward uncompromising Lean Brain Quality Lean Brain stands for consistent economization of intelligence in all realms of life Intelligent systems will only be operated by unskilled workers Education universities and schools would become obsolete A week of training would be enough for virtually any job You are now the physician for the measles in the State of Ohio In response to phone calls send this prescription Lean Brain is not aimed at dumbing down Lean Brain can survive on just a very small amount of central intelligence Potential savings amount to trillions This is demonstrated using Germany as an example With this book Dueck presents a radical suggestion for world improvement The desire to laugh infinitely about it will eventually segue into a collective rude awakening The book contains concrete advice for managers to economize on intelligence and is thus in keeping with the theme written in an easy to read fashion It contains no self doubt whatsoever Awarded the Business Book Prize from Financial Times Deutschland and getAbstract AG

Thinking Reality and Time through Film José Manuel Martins,Christine Reeh,2017-03-07 Over the last few decades film has increasingly become an issue of philosophical reflection from an ontological and epistemological perspective and the claim doing philosophy through film has raised extensive discussion about its meaning The mechanical reproduction of reality is one of the most prominent philosophical questions raised by the emergence of film at the end of the nineteenth century inquiring into the ontological nature of both reality and film Yet the nature of this audio photographic and moving reproduction of reality constitutes an ontological puzzle which has widely been disregarded as a main line of enquiry with direct consequences for philosophy Regarding this background this volume brings together the best papers from the Lisbon Conference on Philosophy and Film Thinking Reality and Time through Film held in 2014 What they all have in common is the discussion of new aspects and approaches of how philosophy relates to film Whether by philosophizing through concrete examples of films or whether looking at film s ontological reliance on time and image or its intra active entanglement with reality or truth this book explores grasp film s nature philosophically and provides new insights for the film philosopher and the filmmaker as well as for the freshman fascinated by film for philosophical reasons **Anthropology of the Brain** Roger

Bartra,2014-06-05 A novel study on consciousness and the brain that places culture at the center of the analysis

Cognitive Structural Realism Majid Davoody Beni,2019-01-29 In this book the author develops a new form of structural realism and deals with the problem of representation The work combines two distinguished developments of the Semantic View of Theories namely Structural Realism SR a flourishing theory from contemporary philosophy of science and Ronald Giere and colleagues Cognitive Models of Science approach CMSA Readers will see how replacing the model theoretic structures that are at issue in SR with connectionist networks and activations patterns which are the formal tools of computational neuroscience helps us to deal with the problem of representation The author suggests that cognitive structures are not only the precise formal tools for regimenting the structure of scientific theories but also the tools that the biological brain uses to capture the essential features i e structures of its environment Therefore replacing model theoretic structures with cognitive structures allows us to account for the theories reality relationship on the basis of the most reliable theories of neurology This is how a new form of SR called Cognitive Structural Realism CSR is introduced through this book which articulates and defends CSR and shows how two diverging branches of SVT can be reconciled This ground breaking work will particularly appeal to people who work in the philosophy of science philosophy of mind and cognitive sciences

The Economics of Identity and Creativity Carsten Herrmann-Pillath,2017-07-28 The Economics of Identity and Creativity aims to sythesize naturalistic evolutionary theory while discussing new developments in economics The author s approach reexamines fundamental assumptions about how a capitalist economy works from the relation between producers and consumers to the functioning of intellectual property rights In the creative economy the author argues identities merge with the flow of creative action To explain these changes he draws upon a range of theories from analytical philosophy to biology and from economics to sociology The first part of the book examines the role of language in the naturalistic approach to cultural science Hermann Pillath draws on Darwinian evolutionary theory to map a concept of knowledge Part Two offers a systematic approach to creativity and identity from the naturalistic point of view developed in Part One Here the author builds a theory of creativity from the ideas of conceptual blending in the cognitive sciences Herrmann Pillath presents a theory of identity based on analytical philosophy and looks at the problems in fixing the boundaries of an individual identity both in biological evolutionary theory and brain sciences He takes the concept of identity through the current economic approaches examining the distinction between social and personal identity This fascinating interdisciplinary work provides a precise argument that the foundations of economics can be found in cultural science and it has evolved to become the cultural institution at the core of the modern economy
