Contemporary Design Theory Jeffrey H. Dinitz, Douglas R. Stinson, 1992-08-04 Foremost experts in their field have contributed articles resulting in a compilation of useful and timely surveys in this ever expanding field Each of these 12 original papers covers important aspects of design theory including several in areas that have not previously been surveyed Also contains surveys updating earlier ones where research is particularly active Design Theory Thomas Beth, Dieter Jungnickel, Hanfried Lenz, 1999 This is the first volume of the second edition of the standard text on design theory Since the first edition there has been extensive development of the theory and this book has been thoroughly rewritten and extended during that time In particular the growing importance of discrete mathematics to many parts of engineering and science have made designs a useful tool for applications It is suitable for advanced courses and as a reference work not only for researchers in discrete mathematics or finite algebra but also for those working in computer and communications engineering and other mathematically oriented disciplines Exercises are included throughout and the book concludes with an extensive and updated bibliography of well over 1800 items **Surveys in Combinatorics, 1993** Keith Walker, 1993 This volume contains the invited papers presented at the 14th British Combinatorial Conference held at the University of Keele in July 1993 Surveys in Combinatorics, 1999 John Douglas Lamb, Donald Arthur Preece, 1999 Up to date resource on combinatorics for graduate students and researchers **Computational Algebra and Number Theory** Wieb Bosma, Alf van der Poorten, 2013-03-09 Computers have stretched the limits of what is possible in mathematics More they have given rise to new fields of mathematical study the analysis of new and traditional algorithms the creation of new paradigms for implementing computational methods the viewing of old techniques from a concrete algorithmic vantage point to name but a few Computational Algebra and Number Theory lies at the lively intersection of computer science and mathematics It highlights the surprising width and depth of the field through examples drawn from current activity ranging from category theory graph theory and combinatorics to more classical computational areas such as group theory and number theory Many of the papers in the book provide a survey of their topic as well as a description of present research Throughout the variety of mathematical and computational fields represented the emphasis is placed on the common principles and the methods employed Audience Students experts and those performing current research in any of the topics mentioned above

The papers in this proceeding discuss current and future trends in wearable communications and personal health management through the use of wireless body area networks (WBAN). The authors posit new technologies that can provide trustworthy communications mechanisms from the user to medical health databases. The authors discuss not only on-body devices but also technologies providing information in-body. Also discussed are dependable communications combined with accurate localization and behavior analysis, which will benefit WBAN technology and make the healthcare processes more effective. The papers were presented at the 13th EAI International Conference on Body Area Networks (BODYNETS 2018), Oulu, Finland, 02-03 October 2018.

Advances in Cryptology - EUROCRYPT '93 Tor Helleseth, 2003-05-13. Eurocrypt is a series of open workshops on the theory and application of cryptographic techniques. These meetings have taken place in Europe every year since 1982 and are sponsored by the International Association for Cryptologic Research. Eurocrypt 93 was held in the village of Lofthus in Norway in May 1993. The call for papers resulted in 117 submissions with authors representing 27 different countries. The 36 accepted papers were selected by the program committee after a blind refereeing process. The papers are grouped into parts on authentication, public key, block ciphers, secret sharing, stream ciphers, digital signatures, protocols, hash functions, payment systems, and cryptanalysis. The volume includes 6 further rump session papers.
