Continuity Or Replacement Controversies In Homo Sapiens Evolution:

Continuity or Replacement Guenter Brauer, Fred H. Smith, 2020-08-26 This volume is based on the symposium on controversies in Homo sapiens evolution in Zagreb It examines the competing models for modern human origins within the framework of present day knowledge in the areas of human paleontology paleolithic archaeology and molecular genetics

Conceptual Issues in Modern Human Origins Research Geoffrey A. Clark, Catherine M. Willermet, While those who study human origins now agree that the evolution of modern human form extends back much further in time than the evolution of modern human behavior they disagree sharply as to how to interpret the substantive data Two fundamentally incommensurate interpretations of our origins the Replacement camp and the Continuity camp have now emerged out of pre existing models and theories that go back to the last quarter of the 19th century This book contends that these positions are based on radically different biases and assumptions about what the remote human past was like The purpose of this volume is to examine those conceptual differences not to arrive at a consensus but rather to explore the reasons why a consensus might never be possible

Origins of Anatomically Modern Humans Doris V. Nitecki, Matthew H. Nitecki, 2013-11-11 This volume is based on the Field Museum of Natural History Spring Systematics Symposium held in Chicago on May 11 1991 The financial support of Ray and Jean Auel and of the Field Museum is gratefully acknowledged When we teach or write we present only those elements that support our arguments We avoid all weak points of our debate and all the uncertainties of our models Thus we offer hypotheses as facts Multiauthored books like ours which simultaneously advocate and question diverse views avoid the pitfalls and lessen the impact of indoctrination In this volume we analyze the anthropological and biological disagreements and the positions taken on the origins of modern humans point out difficulties with the interpretations and suggest that the concept of the human origin can be explained only when we first attempt to define Homo sapiens sapiens One of the major controversies in physical anthropology concerns the geographic origin of anatomically modern humans It is undisputed due to the extensive research of the Leakeys and their colleagues that the family Hominidae originated in Africa but the geographic origin of Homo sapiens sapiens is less concretely accepted Two schools of thought exist on this topic

The Domestication of Humans Robert G. Bednarik, 2020-03-27 The Domestication of Humans explains the alternative to the African Eve model by attributing human modernity not to a speciation event in Africa but to the unintended self domestication of humans This alternative account of human origins provides the reader with a comprehensive explanation of all features defining our species that is consistent with all the available evidence These traits include but are not limited to massive neotenisation numerous somatic changes susceptibility to almost countless detrimental conditions and maladaptations brain atrophy loss of oestrus and thousands of genetic impairments The teleological fantasy of replacement by a superior species that has dominated the topic of modern human origins has never explained any of the many features that distinguish us from our robust ancestors This book explains all of them in one consistent elegant theory It

presents the most revolutionary proposal of human origins since Darwin Although primarily intended for the academic market this book is perfectly suitable for anyone interested in how and why we became the species that we are today

Race and Human Evolution Milford H. Wolpoff, Rachel Caspari, 1997 Race and Human Evolution shows how the debate over the Eve theory reflects a long history of theories about human origins and race that has been fraught with social and political implications

The Evolution of Modern Human Diversity Marta Mirazón Lahr, 1996-05-30 Investigates the two main theories of how and where humans evolved

Wiley-Blackwell Encyclopedia of Human Evolution Bernard Wood, 2011-03-31 This comprehensive A to Z encyclopedia provides extensive coverage of important scientific terms related to improving our understanding of how we evolved Specifically the 5 000 entries in this two volume set cover evidence and methods used to investigate the relationships among the living great apes evidence about what makes the behavior of modern humans distinctive and evidence about the evolutionary history of that distinctiveness as well as information about modern methods used to trace the recent evolutionary history of modern human populations This text provides a resource for everyone studying the emergence of Homo sapiens Visit the companion site <http://www.woodhumanevolution.com> target _blank to browse additional references and updates from this comprehensive encyclopedia

The Origins of Modern Humans Fred H. Smith, James C. Ahern, 2013-07-09 This update to the award winning *The Origins of Modern Humans* A World Survey of the Fossil Evidence covers the most accepted common theories concerning the emergence of modern Homo sapiens adding fresh insight from top young scholars on the key new discoveries of the past 25 years *The Origins of Modern Humans* Biology Reconsidered allows field leaders to discuss and assess the assemblage of hominid fossil material in each region of the world during the Pleistocene epoch It features new fossil and molecular evidence such as the evolutionary inferences drawn from assessments of modern humans and large segments of the Neandertal genome It also addresses the impact of digital imagery and the more sophisticated morphometrics that have entered the analytical fray since 1984 Beginning with a thoughtful introduction by the authors on modern human origins the book offers such insightful chapter contributions as Africa The Cradle of Modern People Crossroads of the Old World Late Hominin Evolution in Western Asia A River Runs through It Modern Human Origins in East Asia Perspectives on the Origins of Modern Australians Modern Human Origins in Central Europe The Makers of the Early Upper Paleolithic in Western Eurasia Neandertal Craniofacial Growth and Development and Its Relevance for Modern Human Origins Energetics and the Origin of Modern Humans Understanding Human Cranial Variation in Light of Modern Human Origins The Relevance of Archaic Genomes to Modern Human Origins The Process of Modern Human Origins The Evolutionary and Demographic Changes Giving Rise to Modern Humans The Paleobiology of Modern Human Emergence Elegant and thought provoking *The Origins of Modern Humans* Biology Reconsidered is an ideal read for students grad students and professionals in human evolution and paleoanthropology
