Continuous Bounded Cohomology Of Locally Compact Groups:

Continuous Bounded Cohomology of Locally Compact Groups Nicolas Monod, 2003-07-01 Recent research has repeatedly led to connections between important rigidity questions and bounded cohomology However the latter has remained by and large intractable This monograph introduces the functorial study of the continuous bounded cohomology for topological groups with coefficients in Banach modules The powerful techniques of this more general theory have successfully solved a number of the original problems in bounded cohomology As applications one obtains in particular rigidity results for actions on the circle for representations on complex hyperbolic spaces and on Teichmüller spaces A special effort has been made to provide detailed proofs or references in quite some generality

Geometric Group Theory Clara Löh, 2017-12-19 Inspired by classical geometry geometric group theory has in turn provided a variety of applications to geometry topology group theory number theory and graph theory This carefully written textbook provides a rigorous introduction to this rapidly evolving field whose methods have proven to be powerful tools in neighbouring fields such as geometric topology Geometric group theory is the study of finitely generated groups via the geometry of their associated Cayley graphs It turns out that the essence of the geometry of such groups is captured in the key notion of quasi isometry a large scale version of isometry whose invariants include growth types curvature conditions boundary constructions and amenability This book covers the foundations of quasi geometry of groups at an advanced undergraduate level The subject is illustrated by many elementary examples outlooks on applications as well as an extensive collection of exercises

Trends in Harmonic Analysis Massimo A. Picardello, 2012-12-05 This book illustrates the wide range of research subjects developed by the Italian research group in harmonic analysis originally started by Alessandro Figliola Talamanca to whom it is dedicated in the occasion of his retirement In particular it outlines some of the impressive ramifications of the mathematical developments that began when Figliola Talamanca brought the study of harmonic analysis to Italy the research group that he nurtured has now expanded to cover many areas Therefore the book is addressed not only to experts in harmonic analysis summability of Fourier series and singular integrals but also in potential theory symmetric spaces analysis and partial differential equations on Riemannian manifolds analysis on graphs trees buildings and discrete groups Lie groups and Lie algebras and even in far reaching applications as for instance cellular automata and signal processing low discrepancy sampling Gaussian noise

Discrete Geometric Analysis Motoko Kotani, 2004 Collects papers from the proceedings of the first symposium of the Japan Association for Mathematical Sciences This book covers topics that center around problems of geometric analysis in relation to heat kernels random walks and Poisson boundaries on discrete groups graphs and other combinatorial objects

New Directions in Locally Compact

Groups Pierre-Emmanuel Caprace, Nicolas Monod, 2018-02-08 This collection of expository articles by a range of established experts and newer researchers provides an overview of the recent developments in the theory of locally compact groups It includes introductory articles on totally disconnected locally compact groups profinite groups p -adic Lie groups and the metric geometry of locally compact groups Concrete examples including groups acting on trees and Neretin groups are discussed in detail An outline of the emerging structure theory of locally compact groups beyond the connected case is presented through three complementary approaches Willis theory of the scale function global decompositions by means of subnormal series and the local approach relying on the structure lattice An introduction to lattices invariant random subgroups and L2 invariants and a brief account of the Burger Mozes construction of simple lattices are also included A final chapter collects various problems suggesting future research directions

Local and Semi-Local Bifurcations in Hamiltonian Dynamical Systems Heinz Hanßmann, 2006-10-18 This book demonstrates that while elliptic and hyperbolic tori determine the distribution of maximal invariant tori they themselves form n -parameter families Therefore torus bifurcations of high co dimension may be found in a single given Hamiltonian system absent untypical conditions or external parameters The text moves logically from the integrable case in which symmetries allow for reduction to bifurcating equilibria to non integrability where smooth parametrisations must be replaced by Cantor sets

Rigidity in Dynamics and Geometry Marc Burger, Alessandra Iozzi, 2013-03-09 This volume of proceedings is an offspring of the special semester Ergodic Theory Geometric Rigidity and Number Theory which was held at the Isaac Newton Institute for Mathematical Sciences in Cambridge UK from January until July 2000 Beside the activities during the semester there were workshops held in January March and July the first being of introductory nature with five short courses delivered over a week Although the quality of the workshops was excellent throughout the semester the idea of these proceedings came about during the March workshop which is hence more prominently represented The format of the volume has undergone many changes but what has remained untouched is the enthusiasm of the contributors since the onset of the project suffice it to say that even though only two months elapsed between the time we contacted the potential authors and the deadline to submit the papers the deadline was respected in the vast majority of the cases The scope of the papers is not completely uniform throughout the volume although there are some points in common We asked the authors to write papers keeping in mind the idea that they should be accessible to students At the same time we wanted the papers not to be a summary of results that appeared somewhere else

Russian Mathematical Surveys, 1960 *European Congress of Mathematics* Ari Laptev, 2005 The European Congress of Mathematics held every four years has established itself as a major international mathematical event Following those in Paris 1992 Budapest 1996 and Barcelona 2000 the Fourth European Congress of Mathematics took place in Stockholm Sweden June 27 to July 2 2004 with 913 participants from 65 countries Apart from seven plenary and thirty three invited lectures there were six Science Lectures covering the most relevant aspects of mathematics in science and

technology Moreover twelve projects of the EU Research Training Networks in Mathematics and Information Sciences as well as Programmes from the European Science Foundation in Physical and Engineering Sciences were presented Ten EMS Prizes were awarded to young European mathematicians who have made a particular contribution to the progress of mathematics Five of the prizewinners were independently chosen by the 4ECM Scientific Committee as plenary or invited speakers The other five prizewinners gave their lectures in parallel sessions Most of these contributions are now collected in this volume providing a permanent record of so much that is best in mathematics today

Matrix Inequalities Xingzhi Zhan, 2004-10-19 The main purpose of this monograph is to report on recent developments in the field of matrix inequalities with emphasis on useful techniques and ingenious ideas Among other results this book contains the affirmative solutions of eight conjectures Many theorems unify or sharpen previous inequalities The author's aim is to streamline the ideas in the literature The book can be read by research workers graduate students and advanced undergraduates

Monomialization of Morphisms from 3-Folds to Surfaces Steven D. Cutkosky, 2004-10-13 A morphism of algebraic varieties over a field characteristic 0 is monomial if it can locally be represented in étale neighborhoods by a pure monomial mapping The book gives proof that a dominant morphism from a nonsingular 3 fold X to a surface S can be monomialized by performing sequences of blowups of nonsingular subvarieties of X and S The construction is very explicit and uses techniques from resolution of singularities A research monograph in algebraic geometry it addresses researchers and graduate students

Manis Valuations and Prüfer Extensions I Manfred Knebusch, Digen Zhang, 2004-10-19 The present book is devoted to a study of relative Prüfer rings and Manis valuations with an eye to application in real and p -adic geometry If one wants to expand on the usual algebraic geometry over a non algebraically closed base field e.g. a real closed field or p -adically closed field one typically meets lots of valuation domains Usually they are not discrete and hence not noetherian Thus for a further development of real algebraic and real analytic geometry in particular and certainly also rigid analytic and p -adic geometry new chapters of commutative algebra are needed often of a non noetherian nature The present volume presents one such chapter

Mathematical Epidemiology Fred Brauer, Pauline van den Driessche, J. Wu, 2008-04-13 Based on lecture notes of two summer schools with a mixed audience from mathematical sciences epidemiology and public health this volume offers a comprehensive introduction to basic ideas and techniques in modeling infectious diseases for the comparison of strategies to plan for an anticipated epidemic or pandemic and to deal with a disease outbreak in real time It covers detailed case studies for diseases including pandemic influenza West Nile virus and childhood diseases Models for other diseases including Severe Acute Respiratory Syndrome fox rabies and sexually transmitted infections are included as applications Its chapters are coherent and complementary independent units In order to accustom students to look at the current literature and to experience different perspectives no attempt has been made to achieve united writing style or unified notation Notes on some mathematical background calculus matrix algebra differential equations and probability have been prepared and may

be downloaded at the web site of the Centre for Disease Modeling www.cdm.yorku.ca *Mathematical Models of Granular Matter* Gianfranco Capriz, Pasquale Giovine, Paolo Maria Mariano, 2008-04-18 Granular matter displays a variety of peculiarities that distinguish it from other appearances studied in condensed matter physics and renders its overall mathematical modelling somewhat arduous Prominent directions in the modelling granular flows are analyzed from various points of view Foundational issues numerical schemes and experimental results are discussed The volume furnishes a rather complete overview of the current research trends in the mechanics of granular matter Various chapters introduce the reader to different points of view and related techniques New models describing granular bodies as complex bodies are presented Results on the analysis of the inelastic Boltzmann equations are collected in different chapters Gallavotti Cohen symmetry is also discussed *Structured Population Models in Biology and Epidemiology* Pierre Magal, Shigui Ruan, 2008-04-30 In this new century mankind faces ever more challenging environmental and public health problems such as pollution invasion by exotic species the emergence of new diseases or the emergence of diseases into new regions West Nile virus SARS Anthrax etc and the resurgence of existing diseases in urban areas malaria TB HIV AIDS etc Mathematical models have been successfully used to study many biological epidemiological and medical problems and nonlinear and complex dynamics have been observed in all of those contexts Mathematical studies have helped us not only to better understand these problems but also to find solutions in some cases such as the prediction and control of SARS outbreaks understanding HIV infection and the investigation of antibiotic resistant infections in hospitals Structured population models distinguish individuals from one another according to characteristics such as age size location status and movement to determine the birth growth and death rates interaction with each other and with environment infectivity etc The goal of structured population models is to understand how these characteristics affect the dynamics of these models and thus the outcomes and consequences of the biological and epidemiological processes There is a very large and growing body of literature on these topics This book deals with the recent and important advances in the study of structured population models in biology and epidemiology There are six chapters in this book written by leading researchers in these areas *Inverse Problems and Imaging* Luis L. Bonilla, 2009-06-19 Nowadays we are facing numerous and important imaging problems nondestructive testing of materials monitoring of industrial processes enhancement of oil production by efficient reservoir characterization emerging developments in noninvasive imaging techniques for medical purposes computerized tomography CT magnetic resonance imaging MRI positron emission tomography PET X ray and ultrasound tomography etc In the CIME Summer School on Imaging Martina Franca Italy 2002 leading experts in mathematical techniques and applications presented broad and useful introductions for non experts and practitioners alike to many aspects of this exciting field The volume contains part of the above lectures completed and updated by additional contributions on other related topics *Mathematical Theory of Feynman Path Integrals* Sergio Albeverio, Rafael Høegh-Krohn, Sonia Mazzucchi, 2008-05-06 The 2nd edition of LNM 523 is based on the two

first authors mathematical approach of this theory presented in its 1st edition in 1976 An entire new chapter on the current forefront of research has been added Except for this new chapter and the correction of a few misprints the basic material and presentation of the first edition has been maintained At the end of each chapter the reader will also find notes with further bibliographical information
