Haladyna, 2012-08-21 Automatic item generation AIG represents a relatively new and unique research area where specific cognitive and psychometric theories are applied to test construction practices for the purpose of producing test items using technology The purpose of this book is to bring researchers and practitioners up to date on the growing body of research on AIG by organizing in one volume what is currently known about this research area Part I begins with an overview of the concepts and topics necessary for understanding AIG by focusing on both its history and current

applications Part II presents two theoretical frameworks and practical applications of these frameworks in the production of item generation Part III summarizes the psychological and substantive characteristics of generated items Part IV concludes with a discussion of the statistical models that can be used to estimate the item characteristics of generated items features one future application of AIG describes the current technologies used for AIG and also highlights the unresolved issues that must be addressed as AIG continues to mature as a research area Comprehensive The book provides a comprehensive analysis of both the theoretical concepts that define automatic item generation and the practical considerations required to implement these concepts Varied Applications Readers are provided with novel applications in diverse content areas e q science and reading comprehension that range across all educational levels elementary through university Mathematical Programming Nimrod Megiddo, 2012-12-06 The starting point of this volume was a conference entitled Progress in Mathematical Programming held at the Asilomar Conference Center in Pacific Grove California March 1 4 1987 The main topic of the conference was developments in the theory and practice of linear programming since Karmarkar s algorithm There were thirty presentations and approximately fifty people attended Presentations included new algorithms new analyses of algorithms reports on computational experience and some other topics related to the practice of mathematical programming Interestingly most of the progress reported at the conference was on the theoretical side Several new polynomial algorithms for linear program ming were presented Barnes Chopra Jensen Goldfarb Mehrotra Gonzaga Kojima Mizuno Yoshise Renegar Todd Vaidya and Ye Other algorithms presented were by Betke Gritzmann Blum Gill Murray Saunders Wright Nazareth Vial and Zikan Cottle Efforts in the theoretical analysis of algorithms were also reported Anstreicher Bayer Lagarias Imai Lagarias Megiddo Shub Lagarias Smale and Vanderbei Computational experiences were reported by Lustig Tomlin Todd Tone Ye and Zikan Cottle Of special interest although not in the main direction discussed at the conference was the report by Rinaldi on the practical solution of some large traveling salesman problems At the time of the conference it was still not clear whether the new algorithms developed since Karmarkar's algorithm would replace the simplex method in practice Alan Hoffman presented results on conditions under which linear programming problems can be solved by greedy algorithms Principles of Adaptive Optics Robert K. Tyson, Benjamin West Frazier, 2022-02-27 Principles of Adaptive Optics describes the foundations principles and applications of adaptive optics AO and its enabling technologies This leading textbook addresses the fundamentals of AO at the core of astronomy high energy lasers biomedical imaging and optical communications Key Features Numerous examples to explain and support the underlying principles Hundreds of new references to support the topics that are addressed End of chapter questions and exercises A complete system design example threaded through each chapter as new material is introduced Second International Handbook of Mathematics Education Alan Bishop, M.A. (Ken) Clements, Christine Keitel-Kreidt, Jeremy Kilpatrick, Frederick Koon-Shing Leung, 2012-02-02 ALAN 1 BISHOP The first International Handbook on Mathematics Education was published by Kluwer

Academic Publishers in 1996 However most of the writing for that handbook was done in 1995 and generally reflected the main research and development foci prior to 1994 There were four sections 36 chapters and some 150 people contributed to the final volume either as author reviewer editor or critical friend. The task was a monumental one attempting to cover the major research and practice developments in the international field of mathematics education as it appeared to the contributors in 1995 Inevitably there were certain omissions some developments were only starting to emerge and some literatures were only sketchy and speculative However that Handbook has had to be reprinted three times so it clearly fulfilled a need and I personally hope that it lived up to what I wrote in its Introduction The Handbook thus attempts not merely to present a description of the international state of the field but also to offer synthetic and reflective overviews on the different directions being taken by the field on the gaps existing in our present knowledge on the current problems being faced and on the future possibilities for development Bishop et al 1996 Since that time there has been even more activity in our field and now seems a good time to take stock again to reflect on what has happened since 1995 and to create a second Handbook with the same overall goals Party of the People Patrick Ruffini, 2023-11-07 An eye opening must read Ben Shapiro founder of The Daily Wire about the future of the Republican party as they unite working class voters in a multi racial cross generational populist coalition Donald Trump's victory in the 2016 presidential election shocked the world Yet his defeat in 2020 may have been even more surprising he received 12 million more votes in 2020 than in 2016 and his unexpectedly diverse coalition included millions of nonwhite voters a rarity for the modern Republican party In 2020 Trump defied expectations and few journalists strategists or politicians could explain why Trump had nearly won reelection Patrick Ruffini a Republican pollster and one of the country's leading experts on political targeting technology and demography has the answers and the explanation may surprise you For all his apparent divisiveness Trump assembled the most diverse Republican presidential coalition in history and rode political trends that will prove significant for decades to come The shift is profound seven in ten American voters belong to groups that have shifted right in the last two presidential elections while under three in ten whites with a college degree belong to votes groups that are trending left Together this super majority of right trending voters forms a colorblind populist coalition largely united by its working class roots moderate to conservative views on policy strong religious beliefs and indifference to or outright rejection of the identity politics practice by the left Not all these voters are Republican and in certain corners of the coalition only a small minority are But recent elections are pointing us towards a future where party allegiances have been utterly upended The Party of the People demonstrates this data Ruffini was as wrong as every pollster in 2016 and spent the intervening years figuring out why and developing better methods of analyzing voters in the digital age Using robust data he shifts you away from the complacent widespread narrative that the Republican party is a party of white rural voters It is but more importantly for its longevity it s a party of non college educated voters And as fewer voters attend college the Republican party shows no signs of stagnation With rich

data and clear analysis Party of the People is a deeply researched book Amy Walter editor in chief of The Cook Political Report that explains the present and future of the Republican party and American elections **Teacher's Guide** Karen Gentry-Ederer,2012-09-30 Create a common language for the school teachers and parents with the help of this Teacher's Guide With ideas and supporting materials for easy and effective family night activities centered around specific content areas teachers can easily encourage parent involvement These activities help acquaint parents and students with the eighth grade classroom creating a more cohesive learning environment for students **Research in Education**, 1968

Artificial Intelligence and Symbolic Computation Gonzalo A. Aranda-Corral, Jacques Calmet, Francisco J. Martín-Mateos, 2014-12-08 This book constitutes the refereed proceedings of the 12th International Conference on Artificial Intelligence and Symbolic Computation AISC 2014 held in Seville Spain in December 2014 The 15 full papers presented together with 2 invited papers were carefully reviewed and selected from 22 submissions. The goals were on one side to bind mathematical domains such as algebraic topology or algebraic geometry to AI but also to link AI to domains outside pure algorithmic computing The papers address all current aspects in the area of symbolic computing and AI basic concepts of computability and new Turing machines logics including non classical ones reasoning learning decision support systems and machine intelligence and epistemology and philosophy of symbolic mathematical computing **Energy and water** development appropriations for 2008 United States. Congress. House. Committee on Appropriations. Subcommittee on Energy and Water Development, 2007 **Soviet Mathematics** ,1973 *Algorithms and Complexity* Dimitris Fotakis, Aris Pagourtzis, Vangelis Th. Paschos, 2017-04-12 This book constitutes the refereed conference proceedings of the 10th International Conference on Algorithms and Complexity CIAC 2017 held in Athens Greece in May 2017 The 36 revised full papers were carefully reviewed and selected from 90 submissions and are presented together with 3 abstracts of invited talks and a paper to the 70th birthday of Stathis Zachos The papers present original research in the theory and applications of algorithms and computational complexity Attractors Under Autonomous and Non-autonomous Perturbations Matheus C. Bortolan, Alexandre N. Carvalho, José A. Langa, 2020-05-29 This book provides a comprehensive study of how attractors behave under perturbations for both autonomous and non autonomous problems Furthermore the forward asymptotics of non autonomous dynamical systems is presented here for the first time in a unified manner When modelling real world phenomena imprecisions are unavoidable On the other hand it is paramount that mathematical models reflect the modelled phenomenon in spite of unimportant neglectable influences discounted by simplifications small errors introduced by empirical laws or measurements among others The authors deal with this issue by investigating the permanence of dynamical structures and continuity properties of the attractor This is done in both the autonomous time independent and non autonomous time dependent framework in four distinct levels of approximation the upper semicontinuity lower semicontinuity topological structural stability and geometrical structural stability. This book is aimed at graduate students

and researchers interested in dissipative dynamical systems and stability theory and requires only a basic background in metric spaces functional analysis and for the applications techniques of ordinary and partial differential equations
