The Thesis Writing Journeys of Bachelor's and Master's Students Bojana Petrić, Montserrat Castelló, 2024-12-20

Completing a thesis is a crucial final stage in many bachelor's and master's programmes across Europe and beyond. However, the process of thesis writing, how it is experienced by the writers, and how those experiences impact on writing remain underexplored. This book examines the student experience of thesis writing through an interdisciplinary perspective, drawing on theories of learning, emotions, and genre, and narrative discursive analysis. As a result of this approach, the thesis is reconceptualised as a multilayered experience from the point of view of student writers. The chapters, which arose out of a collaborative research project across 10 European countries, employ an innovative combination of methods, including the use of journey plots, to provide a complex picture of the thesis writing process, which will be of interest to readers involved in academic writing at all levels.

The

Teaching and Learning of Mathematics at University Level Derek Holton, 2006-04-11. This book is the final report of the ICMI study on the Teaching and Learning of Mathematics at University Level. As such, it is one of a number of such studies that ICMI has commissioned. The other Study Volumes cover assessment in mathematics education, gender equity research in mathematics education, the teaching of geometry and history in mathematics education. All of these Study Volumes represent a statement of the state of the art in their respective areas. We hope that this is also the case for the current Study Volume. The current study on university level mathematics was commissioned for essentially four reasons. First, universities worldwide are accepting a much larger and more diverse group of students than has been the case. Consequently, universities have begun to adopt a role more like that of the school system and less like the elite institutions of the past. As a result, the educational and pedagogical issues facing universities have changed. Second, although university student numbers have increased significantly, there has not been a corresponding increase in the number of mathematics majors. Hence, mathematics departments have to be more aware of their students' needs in order to retain the students they have and to attract future students. As part of this awareness, departments of mathematics have to take the teaching and learning of mathematics more seriously than perhaps they have in the past.
