Cast Iron Technology presents a critical review of the nature of cast irons. It discusses the types of cast iron and the general purpose of cast irons. It also presents the history of the iron founding industry. Some of the topics covered in the book are the description of liquid metal state preparation of liquid metal process of melting description of cupola melting and electric melting methods control of composition of liquid metal during preparation description of primary cast iron solidification structures and thermal analysis of metals to determine its quality. Solidification science and the fundamentals of heat treatment are also discussed. An in depth analysis of the hot quenching techniques is provided. The graphitization potential of liquid iron is well presented. A chapter is devoted to microstructural features of cast iron. The book can provide useful information to iron smiths welders students and researchers.

Welding Processes Handbook K Weman, 2011-11-08. The first edition of *Welding processes handbook* established itself as a standard introduction and guide to the main welding technologies and their applications. This new edition has been substantially revised and extended to reflect the latest developments. After an initial introduction the book first reviews gas welding before discussing the fundamentals of arc welding including arc physics and power sources. It then discusses the range of arc welding techniques including TIG plasma MIG MAG MMA and submerged arc welding. Further chapters cover a range of other important welding technologies such as resistance and laser welding as well as the use of welding techniques for cutting surface cladding and hardfacing soldering and brazing. A final group of chapters discuss more general issues such as mechanisation safety residual stress and distortion welding design costs and quality assurance as well as the welding of steel and aluminium. The new edition of *Welding processes handbook* confirms its reputation as a concise authoritative and practical introduction to welding and its applications for both students and engineers. It is designed to meet the requirements of Module 1 *Welding processes and equipment* of the International Institute of Welding IIW guidelines for the training of welding personnel at IWE IWT IWS and IWP level. This new edition has been substantially revised and extended to reflect the latest developments in the main welding technologies and their applications. Reviews gas welding and discusses the fundamentals of arc welding including arc physics and power sources before covering the range of arc welding techniques including TIG plasma MIG MAG MMA and submerged arc welding. Examines a range of important welding technologies such as resistance and laser welding and the use of welding techniques for cutting surface cladding and hardfacing soldering and brazing.
