Methodological Issues in Aging Research Cindy S. Bergeman, Steven M Boker, 2015-12-22 Methodological Issues in Aging Research is the first volume in the Notre Dame Series on Quantitative Methodology This new series provides practical training on the latest quantitative methods used in social and behavioral research Each volume features contributions from leading experts in state of the art techniques applicable to a selected substantive topic The first series volume provides researchers with innovative techniques for the collection and analyses of data focusing on aging and lifespan development The book addresses such techniques as structural equation modeling latent class analysis hierarchical linear growth curve modeling dynamical systems analysis multivariate Rasch models survival analysis multilevel modeling and quantitative genetic methods These new techniques provide better estimates of the direct effect of environmental or treatment effects and the dynamic pattern of genetic and environmental influences on adult development more precise predictions of outcomes which in turn increase the diagnostic power of test instruments the potential for developing new treatments that take advantage of the intrinsic dynamics of the course of a disease or age related change to enhance treatment Methodological Issues in Aging Research appeals to advanced students and researchers in lifespan development gerontology health psychology and other fields related to human development It can be used as a main or supplemental text for advanced courses related to developmental research methods **Understanding Human Development** Ursula M.

Staudinger, Ulman E.R. Lindenberger, 2012-12-06 K Warner Schaie I am pleased to write a foreword for this interesting volume particularly as over many years I have had the privilege of interacting with the editors and a majority of the contributors in various professional roles as a colleague mentor or research collaborator The editors begin their introduction by asking why one would want to read yet another book on human development They immediately answer their question by pointing out that many developmentally oriented texts and other treatises neglect the theoretical foundations of human development and fail to embed psychological constructs within the multidisciplinary context so essential to understanding development This volume provides a positive remedy to past deficiencies in volumes on human development with a well organized structure that leads the reader from a general introduction through the basic processes to methodological issues and the relation of developmental constructs to social context and biological infrastructure This approach does not surprise After all the editors and most of the contributors at one time or another had a connection to the Max Planck Institute of Human Development in Berlin whether as students junior scientists or senior visitors That institute under the leadership of Paul Baltes has been instrumental in pursuing a systematic lifespan approach to the study of cognition and personality Over the past two decades it has influenced the careers of a generation of scientists who have advocated long term studies of
