Lexical and Syntactical Constructions and the

Construction of Meaning Marjolyn Verspoor, Ki-dong Yi, Eve Sweetser, 1997-01-01 The basic tenet of cognitive linguistics is

that every linguistic expression is a construal relation The first section of this volume focuses on issues of such construal and

presentation of information including figure ground relations image schematic structures and the role of syntactic

constructions in information structure In sections two and three papers are presented on cross categorial polysemy between

lexical and grammatical uses of a morpheme and between different grammatical senses and on the relationship between

earlier lexical senses and later grammatical ones The final section of the volume brings together studies which shed further

light on transitivity and argument structure The study of transitivity necessarily entails exploration of the relationship

between syntactic constructions and the pragmatics and semantics conveyed by such constructions As a whole this collection

of papers gives new evidence on the complexity and motivation of the mapping between linguistic form and function and

offers a wealth of new directions for research on the construction of meaning at every level of the sentence
