propels economic development Contrary to staple crops industrial crops are cultivated with the intention of being sold for a high profit Industrial crops are a crucial component of plans to increase food security because they offer the required stability during periods of economic or climatic crises In order to maintain their livelihood and food security many farm households balance the advantages and disadvantages of producing food crops and industrial crops Avoiding land use rivalry with crops grown for food and feed production is crucial when considering growing industrial crops on agricultural soils The past several years have seen a rise in the awareness of scholars and decision makers regarding the immediate and long term effects of climatic variables on economic food security social and political results In order to sustain food production with more climate resilient crops for future generations genetic variety both natural and artificial is crucial Therefore addressing the problem of finding a compromise between increasing crop production under a specific set of conditions and reducing the chance of crop failure when conditions change is important and difficult An assortment of meteorological conditions is used to grow industrial crops Many are subsistence farmers who run extremely tiny farms with very little agricultural input to produce products that can be sold It is a significant problem to preserve the variety of these crops and handle all crop culture related difficulties By offering the knowledge required to minimize the dangers of industrial crop breeding through managing genetic diversity the author believe that this book will primarily address a need that has not yet been met in this and other grower groups

Applied Mutation Breeding for Vegetatively Propagated Crops C. Broertjes, A.M. van Harten, 2013-10-22 When the first edition of this book appeared in 1978 it was warmly received Most readers and reviewers especially valued the extensive coverage of the literature in the chapters dealing with the different crops a valuable and timely addition to plant breeders and of outstanding value to breeders of ornamental plants The book s special strength resides in the extensive review of literature International Journal for Breeding Research This is also reflected by the many times that the work has been referred to in other publications This new edition provides plant breeders

as well as scientists with an up to date overview of methods and results of the application of mutation breeding in order to genetically improve vegetatively propagated crops General principles and background information about mutation breeding in general methods of treatment material to be treated and results are discussed in the introductory chapters followed by a description of the specific situation in each of the vegetatively propagated crops ever used in a mutation breeding project This volume brings together all the important and relevant literature in the field It provides a complete account of mutation breeding of vegetatively produced crops presenting conclusions about the value of the method its possibilities limitations and shortcomings and the possible difficulties of further application in various crops The initial chapters deal with the interactions between mutagenic treatment and plant material such as aspects of mutagenic treatment post irradiation behaviour of shoot apices and adventitious bud techniques All available literature is then discussed crop by crop and critically evaluated Almost 1700 references are covered and whenever possible suggestions for more efficient application of mutation breeding methods are given
