**Arid Zone Irrigation** Bruno Yaron, Erik Danfors, Y. Vaadia, 2012-12-06 A book previously published within the framework of the Ecological Studies Series entitled Physical Aspects of Soil Water and Salts in Ecosystems included a wide spectrum of research papers devoted to new findings in the field of soil plant water relationships. Arid Zone Irrigation has been written specifically as a textbook for agronomists, soil scientists, agrometeorologists, water engineers and plant physiologists who want a clear presentation of irrigation fundamentals in arid and semi arid zones. It was our intention to provide an understanding of the basic principles governing irrigation technology and to help overcome the problem of water shortage in arid zone agriculture. This book, written by a large number of specialists and covering a broad spectrum of different disciplines, is based on general up to date information as well as on the results of the authors' own research. The idea of preparing such a textbook was conceived during a series of international advanced courses on irrigation held annually at the Institute of Soils and Water Agricultural Research Organization, Volcani Center, Bet Dagan, Israel. The final organization of the material has been influenced by discussions with colleagues from Sweden and Holland and the participants in our summer courses. Grateful acknowledgements are due to Professor CALVIN C ROSE, CSIRO, Canberra, Australia, Professor DALE SWARTZENDRUBER, Purdue University, Lafayette, U S A and Dr SHLOMO P NEUMAN, Agricultural Research Organization, Bet Dagan, Israel, for their many helpful suggestions during critical reading of the manuscript. **Handbook of Irrigation System Selection for Semi-Arid Regions** Mohammad Albaji, Saeid Eslamian, Abd Ali Naseri, Faezeh Eslamian, 2020-07-22 The Handbook of Irrigation System Selection for Semi Arid Regions compares the various types of available irrigation systems for different regions and conditions and explains how to analyze field data to determine the suitability of the land for surface, sprinkle or drip irrigation systems. The book focuses on strategies for irrigation development and management and examines deficit irrigation and partial root zone drying systems. Also, solute leaching modeling under different irrigation systems, soil moisture conditions and organic fertilizer application in arid areas are discussed. Further, it examines multi criteria decision making for irrigation management and the appraisal of agricultural lands for irrigation in hot sub humid regions. Features: Presents comparative analysis to aid in the selection of the most appropriate types of irrigation systems according to land characteristics. Includes numerous practical case studies. Offers parametric evaluation systems for irrigation purposes. Considers data from semi arid zones each with different sub climates. Focusing on semi arid land, the book highlights parametric evaluation systems for irrigation purposes along with the use of analytical hierarchy processes integrated with GIS to determine which systems are best suited. This comprehensive and well illustrated handbook will be of great interest to students, professionals and researchers involved with all aspects of irrigation in semi arid regions.  strived to increase crop yields by overcoming nutrient deficiencies the use of fertilizers has increased dramatically This has  
 created a large chemical industry capable of supplying the needed plant food elements A more complete understanding of  
 soil chemistry and plant nutrition has led to greater fertilizer use with improved fertilization methods and crop cultural  
 practices Improved fertilizer technology has led to the production of more efficient forms of fertilizer The modern fertilizer  
 industry and with it fertilization practices began in the humid countries of the world The use of fertilizers in arid and
