Bridges From Classical To Nonmonotonic Logic:

Bridges from Classical to Nonmonotonic Logic David Makinson, 2005 Imagine a robot trying to size up a difficult situation to find a way of responding Its sensors receive streams of information from which it tries to reach judgements If it relies on deduction alone it will not get far no matter how fast its inference engines for even the most massive information is still typically incomplete there are relevant issues that it does not resolve one way or the other The robot or human agent for that matter needs to go beyond these limits It needs to go supraclassical inferring more than is authorised by classical logic alone But such inferences are inherently uncertain They are also nonmonotonic in the sense that the acquisition of further information even when consistent with the existing stock may lead us to abandon as well as add conclusions Nonmonotonic logic is the study of such reasoning and has been the subject of intensive research for more than two decades But for the newcomer it is still a disconcerting affair lacking unity with many systems going in different directions The purpose of this book is to take the mystery out of the subject giving a clear overall picture of what is going on It makes the essential ideas and main approaches to nonmonotonic logic accessible and meaningful to anyone with a few basic tools of discrete mathematics and a minimal background in classical propositional logic It is written as a textbook with detailed explanations examples comments exercises and answers Students and instructors alike will find it an invaluable guide

A New Perspective on Nonmonotonic Logics Dov M. Gabbay, Karl Schlechta, 2016-11-05 In this book the authors present new results on interpolation for nonmonotonic logics abstract function independence the Talmudic Kal Vachomer rule and an equational solution of contrary to duty obligations The chapter on formal construction is the conceptual core of the book where the authors combine the ideas of several types of nonmonotonic logics and their analysis of natural concepts into a formal logic a special preferential construction that combines formal clarity with the intuitive advantages of Reiter defaults defeasible inheritance theory revision and epistemic considerations It is suitable for researchers in the area of computer science and mathematical logic

Nonmonotonic Reasoning ... Brewka, 1991

Some Developments in Non-monotonic Logic Ravi Malhotra, 1983

Nonmonotonic Logics Karl Schlechta, 1997-01-15 Nonmonotonic logics were created as an abstraction of some types of common sense reasoning analogous to the way classical logic serves to formalize ideal reasoning about mathematical objects These logics are nonmonotonic in the sense that enlarging the set of axioms does not necessarily imply an enlargement of the set of formulas deducible from these axioms Such situations arise naturally for example in the use of information of different degrees of reliability This book emphasizes basic concepts by outlining connections between different formalisms of nonmonotonic logic and gives a coherent presentation of recent research results and reasoning techniques It provides a self contained state of the art survey of the area addressing researchers in AI

Non-monotonic Logic Drew MacDermott, Jon Doyle, 1979

Non-Monotonic Reasoning Michael Reinfrank, Johan de Kleer, Matthew L. Ginsberg, Erik Sandewall, 1988-12-28 This volume contains revised and extended versions of the papers

presented at the Second International Workshop on Non Monotonic Reasoning held in Grassau FRG June 13 15 1988 The workshop brought together researchers with different backgrounds including non monotonic logic logic programming truth maintenance and philosophy Their papers contain substantial advances to the logical foundations of non monotonic reasoning its computational realization and its application to the formalization of common sense reasoning The book presents a snapshot of the state of the art in this research area and provides in depth discussions of current problems and approaches

Nonmonotonic Logic David Etherington, Henry Kautz, Kurt Konolige, 1994 On the Complexity of Fragments of Nonmonotonic Logics Michael Thomas, 2010 *The Many Valued and Nonmonotonic Turn in Logic* Dov M. Gabbay, John Woods, 2007-08-13 The present volume of the Handbook of the History of Logic brings together two of the most important developments in 20th century non classical logic These are many valuedness and non monotonicity On the one approach in deference to vagueness temporal or quantum indeterminacy or reference failure sentences that are classically non bivalent are allowed as inputs and outputs to consequence relations Many valued dialethic fuzzy and quantum logics are among other things principled attempts to regulate the flow through of sentences that are neither true nor false On the second or non monotonic approach constraints are placed on inputs and sometimes on outputs of a classical consequence relation with a view to producing a notion of consequence that serves in a more realistic way the requirements of real life inference Many valued logics produce an interesting problem Non bivalent inputs produce classically valid consequence statements for any choice of outputs A major task of many valued logics of all stripes is to fashion an appropriately non classical relation of consequence The chief preoccupation of non monotonic and default logicians is how to constrain inputs and outputs of the consequence relation In what is called left non monotonicity it is forbidden to add new sentences to the inputs of true consequence statements The restriction takes notice of the fact that new information will sometimes override an antecedently and reasonably derived consequence In what is called right non monotonicity limitations are imposed on outputs of the consequence relation Most notably perhaps is the requirement that the rule of or introduction not be given free sway on outputs Also prominent is the effort of paraconsistent logicians both preservationist and dialethic to limit the outputs of inconsistent inputs which in classical contexts are wholly unconstrained In some instances our two themes coincide Dialethic logics are a case in point Dialethic logics allow certain selected sentences to have as a third truth value the classical values of truth and falsity together So such logics also admit classically inconsistent inputs A central task is to construct a right non monotonic consequence relation that allows for these many valued and inconsistent inputs The Many Valued and Non Monotonic Turn in Logic is an indispensable research tool for anyone interested in the development of logic including researchers graduate and senior undergraduate students in logic history of logic mathematics history of mathematics computer science AI linguistics cognitive science argumentation theory and the history of ideas Detailed and comprehensive chapters covering the entire range of modal logic Contains the latest scholarly discoveries and interpretative

 Bobrow, Philip J. Hayes, 1980 *Formal Methods for Nonmonotonic and Related Logics* Karl Schlechta, 2018-11-03 The two
 volumes in this advanced textbook present results proof methods and translations of motivational and philosophical
 considerations to formal constructions In this Vol I the author explains preferential structures and abstract size In the
 associated Vol II he presents chapters on theory revision and sums defeasible inheritance theory interpolation neighbourhood
 semantics and deontic logic abstract independence and various aspects of nonmonotonic and other logics In both volumes
 the text contains many exercises and some solutions and the author limits the discussion of motivation and general context

 CAMBRIDGE ARTIFICIAL INTELLIGENCE LAB., 1979 Non monotonic logical systems are logics in which the introduction of
 new axioms can invalidate old theorems Such logics are very important in modeling the beliefs of active processes which
 acting in the presence of incomplete information must make and subsequently revise assumptions in light of new
 observations We present the motivation and history of such logics We develop and proof theories a proof procedure and
