Fibonacci and Gann Applications in Financial Markets George MacLean, 2005-08-19 There are many books covering Fibonacci from an artistic and historical point of view and almost as many suggesting that Fibonacci retracements and numbers can be successfully applied to financial market time series. What is missing is a book that addresses the common errors in using screen-based Fibonacci and Gann and other tools. The book is a critical exploration of Fibonacci numbers, retracements, projections, timeframes, and fanlines and their current usage within the financial markets by technical analysts. Although they can be extremely effective analytical tools when used appropriately, mistakes in usage can be extremely costly from a financial and credibility viewpoint. George MacLean takes a brief look at the history of Fibonacci and Gann before providing a full account of their applications in financial markets including fixed income, equity, foreign exchange, commodities, and indexes. In particular, he draws attention to the overuse and misuse of easily applied computer packages available to professional and amateur traders.

Financial Risk Taking Mike Elvin, 2006-02-08 In *Financial Risk Taking*, trader and psychologist Mike Elvin explores the complex relationship between human behaviour patterns and the markets, offering the reader a context in which to assess their own strengths and weaknesses as investors. The book offers an apposite and uncomplicated system of skills development in the form of competences and competencies that can be applied anywhere along the continuum from casual investor to full-time day trader. Elvin presents a Comprehensive Model of Trading Competence, the MOT, as well as the concepts of analysis and refutation, the paramouncy principle, and self-sabotaging behaviours such as the Santa Claus syndrome and Bohica effect. Areas covered include: Emotions: are they functional or disabling? How do the mechanisms of fear, greed, and panic work? Motivation and perception: how do belief paradigms affect perception and performance? What perceptual errors influence decisions to the trader's detriment? Information processing and risk assessment: how does information overload affect investment decisions? Technological and mathematical anxiety: why do we avoid learning the skills we most need? What levels of ability are required? Can psychological and biological theories assist in our understanding of investors' performance?
