Architecture's Desire K. Michael Hays, 2009-10-02 Theorizes an architectural ethos of extreme self reflection and finality from a Lacanian perspective While it is widely recognized that the advanced architecture of the 1970s left a legacy of experimentation and theoretical speculation as intense as any in architecture's history there has been no general theory of that ethos Now in *Architecture's Desire* K Michael Hays writes an account of the late avant garde as an architecture systematically twisting back on itself pondering its own historical status and deliberately exploring architecture's representational possibilities right up to their absolute limits In close readings of the brooding melancholy silence of Aldo Rossi the radically reductive decompositions and archaeologies of Peter Eisenman the carnivalesque excesses of John Hejduk and the cinegrammatic delirium of Bernard Tschumi Hays narrates the story of architecture confronting its own boundaries with objects of ever more reflexivity difficulty and intransigence The late avant garde is the last architecture with philosophical aspirations an architecture that could think philosophical problems through architecture rather than merely illustrate them It takes architecture as the object of its own reflection which in turn produces an unrelenting desire Using the tools of critical theory together with the structure of Lacan's triad imaginary symbolic real Hays constructs a theory of architectural desire that is historically specific and yet sets the terms and the challenges of all subsequent architectural

The Figure of Knowledge Sebastiaan Loosen, Rajesh Heynicks, Hilde Heynen, 2020-10-01 It is a major challenge to write the history of post WWII architectural theory without boiling it down to a few defining paradigms An impressive anthologising effort during the 1990s charted architectural theory mostly via the various theoretical frameworks employed such as critical theory critical regionalism deconstructivism and pragmatism Yet the intellectual contours of what constitutes architectural theory have been constantly in flux It is therefore paramount to ask what kind of knowledge has become important in the recent history of architectural theory and how the resulting figure of knowledge sets the conditions for the actual arguments made The contributions in this volume focus on institutional geographical rhetorical and other conditioning factors They thus screen the unspoken rules of engagement that postwar architectural theory ascribed to

Region Simon Richards, Robert Schmidt III, Cagri Sanliturk, Falli Palaiologou, 2023-07-28 This book explores how the concept of region has evolved over time and shaped architectural culture and practice It questions what the words region and regional mean for architecture cities and landscapes past and present and speculates on the forms they might take in the future Region is explored in many thematic guises as a real geographical site of evolving socio economic activity as a mythical locus of enduring value as a gatekeeper of indigenous crafts and vernacular techniques as a site of architectural and artistic imagination as a repository of contested conflicted and mobile identities The contributing chapters take these themes from the theoretical and literary page through to architectural and urban practice and from the scale of the domestic hearth through to the ocean archipelago and international law enriching the long standing trope of viewing architectural regionalism purely as a matter of style Curated into four key thematic areas Theorised Regions Contested Regions Heritage Regions and Future Regions the book incorporates the values concerns and approaches of a truly diverse international community of scholars curators and practitioners as well as the design work of international students tasked to explore what region means to them

Architect Knows Best Simon Richards, 2016-04-15 The idea that buildings could be used to reform human behaviour and improve society was fundamental to the modernist architecture and planning of people like Walter Gropius Le Corbusier and Jos Luis Sert in the first half of the 20th century Their proposals for functional zoning multi level transport high rise living and machine inspired aesthetics came under attack from the 1950s onwards and many alternative approaches to architecture and planning emerged It was thought that the environmental determinist strand of the discourse was killed off at this time as well This book argues that it was not but on the contrary that it has deepened and diversified Many of the most prominent architect planners continue to design with a view to improving the behaviour of individual people and of society at large By looking at and interviewing major figures and movements of recent years in Britain Europe and America including Leon Krier Peter Eisenman Andres Duany Jane Jacobs Robert Venturi and Denise Scott Brown it demonstrates the myriad ways that architect planners seek to shape human behaviour through buildings In doing so the book raises awareness of this strand within the discourse and examines its different purposes and manifestations It questions whether it is an ineradicable and beneficial part of architecture and planning or a regrettable throwback to a more authoritarian phase discusses why it is seldom acknowledged directly and whether it could be handled more responsibly and with greater understanding Richards does not provide any simple solutions but in conclusion is critical of architect planners who abuse the rhetoric of social reform simply to leverage their attempts to secure building commissions while being more sympathetic towards those who appear to have a sincere desire to improve society through their buildings
