How To Lie With Maps:

How to Lie with Maps Mark Monmonier, 2018-04-13 An updated edition of the humorous informative and perceptive guide to how maps can lead us astray Toronto Globe and Mail An instant classic when first published in 1991 How to Lie with Maps revealed how the choices mapmakers make consciously or unconsciously mean that every map inevitably presents only one of many possible stories about the places it depicts The principles Mark Monmonier outlined back then remain true today despite significant technological changes in the making and use of maps The introduction and spread of digital maps and mapping software however have added new wrinkles to the ever evolving landscape of modern mapmaking Fully updated for the digital age this new edition of How to Lie with Maps examines the myriad ways that technology offers new opportunities for cartographic mischief deception and propaganda While retaining the same brevity range and humor as its predecessors this third edition includes significant updates throughout as well as new chapters on image maps prohibitive cartography and online maps It also includes an expanded section of color images and an updated list of sources for further reading Praise for previous editions of How to Lie with Maps Will leave you much better defended against cheap atlases shoddy journalism unscrupulous advertisers predatory special interest groups and others who may use or abuse maps at your expense Christian Science Monitor

How to Lie with Maps Mark S. Monmonier, 1991 Explains the basic principles of map making tells how to evaluate maps critically and looks at Nazi propaganda maps real estate developers plans and environmental impact maps

How to Make Maps Peter Anthamatten, 2020-12-27 The goal of How to Make Maps is to equip readers with the foundational knowledge of concepts they need to conceive design and produce maps in a legible clear and coherent manner drawing from both classical and modern theory in cartography This book is appropriate for graduate and undergraduate students who are beginning a course of study in geospatial sciences or who wish to begin producing their own maps While the book assumes no a priori knowledge or experience with geospatial software it may also serve GIS analysts and technicians who wish to explore the principles of cartographic design The first part of the book explores the key decisions behind every map with the aim of providing the reader with a solid foundation in fundamental cartography concepts Chapters 1 through 3 review foundational mapping concepts and some of the decisions that are a part of every map This is followed by a discussion of the guiding principles of cartographic design in Chapter 4 how to start thinking about putting a map together in an effective and legible form Chapter 5 covers map projections the process of converting the curved earth's surface into a flat representation appropriate for mapping Chapters 6 and 7 discuss the use of text and color respectively Chapter 8 reviews trends in modern cartography to summarize some of the ways the discipline is changing due to new forms of cartographic media that include 3D representations animated cartography and mobile cartography Chapter 9 provides a literature review of the scholarship in cartography The final component of the book shifts to applied technical concepts important to cartographic production covering data quality concepts and the acquisition of geospatial data sources Chapter 10 and an

overview of software applications particularly relevant to modern cartography production GIS and graphics software Chapter 11 Chapter 12 concludes the book with examples of real world cartography projects discussing the planning data collection and design process that lead to the final map products This book aspires to introduce readers to the foundational concepts both theoretical and applied they need to start the actual work of making maps The accompanying website offers hands on exercises to guide readers through the production of a map from conception through to the final version as well as PowerPoint slides that accompany the text

Lived Topographies and Their Mediatlional Forces Gary Backhaus, John Murungi, 2005 This collection explores the various forms of narrative semiotic and technological mediation that shape the experience of place Gary Backhaus and John Murungi have assembled a wide array of scholars who give a unique perspective on the phenomenology of place

Geo Info Systems ,1996 **How the States Got Their Shapes** Mark Stein, 2008-05-27

Why does Oklahoma have that panhandle Did someone make a mistake We are so familiar with the map of the United States that our state borders seem as much a part of nature as mountains and rivers Even the oddities the entire state of Maryland have become so engrained that our map might as well be a giant jigsaw puzzle designed by Divine Providence But that s where the real mystery begins Every edge of the familiar wooden jigsaw pieces of our childhood represents a revealing moment of history and of well humans drawing lines in the sand How the States Got Their Shapes is the first book to tackle why our state lines are where they are Here are the stories behind the stories right down to the tiny northward jog at the eastern end of Tennessee and the teeny tiny and little known parts of Delaware that are not attached to Delaware but to New Jersey How the States Got Their Shapes examines Why West Virginia has a finger creeping up the side of Pennsylvania Why Michigan has an upper peninsula that isn t attached to Michigan Why some Hawaiian islands are not Hawaii Why Texas and California are so outsized especially when so many Midwestern states are nearly identical in size Packed with fun oddities and trivia this entertaining guide also reveals the major fault lines of American history from ideological intrigues and religious intolerance to major territorial acquisitions Adding the fresh lens of local geographic disputes military skirmishes and land grabs Mark Stein shows how the seemingly haphazard puzzle pieces of our nation fit together perfectly

The New Nature of Maps John Brian Harley, 2001 Focusing on historical examples and the practices of modern cartography J B Harley 1932 1991 offers an alternative to the dominant view that Western cartography since the Renaissance has been a progressive technological scientific and objective trajectory of development This traditional view asserts that maps produce an accurate relational model of terrain and as such epitomize representational modernism which is rooted in the project of the Enlightenment in sum maps banish subjectivity from the image Accordingly cartographers have promoted a standard scientific model for their discipline one in which a mirror of nature can be projected through geometry

and measurement Cartographers often mistakenly assess early maps by this modern yardstick excising from the accepted canon of mapping not only maps from the premodern era but also those from other cultures that do not match Western notions of accuracy BOOK JACKET Title Summary field provided by Blackwell North America Inc All Rights Reserved
