Post-Keynesian Theories of the Firm Nobantu L. Mbeki,2023-04-07 Within Post Keynesian economics there is a spectrum of approaches to theories of the firm but what they have in common to their great benefit is a proper integration of the concept of radical uncertainty data that cannot be known This book revisits Kalecki s theory of the firm is located to show

that it constitutes fertile theoretical ground on which to systematically understand the resultant indeterminacy when firms operate under conditions of radical uncertainty The author proposes a way of generalising radical uncertainty by integrating some of the separate approaches within Post Keynesian economics centred around Kalecki's work Through this it is shown that radical uncertainty does more than just change the ultimate motivation of firms dropping short run profit maximisation more complex motivation interconnectivity with the environment it is central to the emergence existence and motivation of firms and critically also firm strategy It is argued that firms do not simply respond to uncertainty it is the systematic cause of their intentional behaviour Through developing these arguments the book also contributes to the methodology of Kalecki and Shackle as well as Kaleckian price theory This book will be important reading for anyone interested in theories of the firm Post Keynesian economics and heterodox approaches to economics more broadly

Campbell,2019-12-10 This book explores the ways in which education impacts labor markets Specifically the contributions in this book indicate that the future of labor is creative socially aware and inter disciplinary while identifying the changes and innovations needed in our educational systems to meet this demand Due to an increasing automatization robotic manufacturing the character of labor and work in general will change dramatically in the near future This will be the case not only in the western countries but also in the larger emerging economies in Asia for example China and India While societal environments economy and the character of labor are increasingly in a process of dramatic changes the educational systems and the leading principles of research about labor and employment are not changing adequately Cross disciplinary inter disciplinary and trans disciplinary thinking and learning is not the main focus of our educational systems Consequently the systems of academic research follow and apply disciplinary or even sub disciplinary strategies avoiding cross disciplinary research approaches and not supporting inter disciplinary academic career models This book introduces such strategic models to better prepare the next generation of workers for the new knowledge economy and the future of democratic societies **Official Gazette of the United States**
