series in which familiar characters appear in book after book In the late nineteenth and early twentieth century authors began to write science fiction series for children These early series generally had plots that revolved around inventions developed by the protagonist But it was the development and use of rocket and atomic science during World War II that paved the way for interesting and exciting new themes conflicts and plots While much has been written about the early juvenile science fiction series particularly the Tom Swift books comparatively little has been written about children s science fiction series published since 1945 This book provides a broad overview of this previously neglected topic The volume offers a critical look at the history themes characters settings and construction of post 1945 juvenile science fiction series including the A I Gang the Animorphs Commander Toad Danny Dunn Dragonfall Five the Magic School Bus and Space Cat The book begins with an introductory history of juvenile science fiction since 1945 with chapters then devoted to particular topics Some of these topics include the role of aliens and animals attitudes toward humor the absence and presence of science and the characterization of women A special feature is an appendix listing the various series In addition the volume provides extensive bibliographical information

All the Wonder that Would Be Stephen Webb, 2017-05-03 It has been argued that science fiction SF gives a kind of weather forecast not the telling of a fortune but rather the rough feeling of what the future might be like The intention in this book is to consider some of these bygone forecasts made by SF and to use this as a prism through which to view current developments in science and technology In each of the ten main chapters dealing in turn with antigravity space travel aliens time travel the nature of reality invisibility robots means of transportation augmentation of the human body and last but not least mad scientists common assumptions once made by the SF community about how the future would turn out are compared with our modern understanding of various scientific phenomena and in some cases with the industrial scaling of computational and technological breakthroughs A further intention is to explain how the predictions and expectations of SF were rooted in the scientific orthodoxy of their day and use this to explore how our scientific understanding of various topics has developed over time as well as to demonstrate how the ideas popularized in SF subsequently influenced working scientists Since gaining a BSc in physics from the University of Bristol and a PhD in theoretical physics from the University of Manchester Stephen Webb has worked in a variety of universities in the UK He is a regular contributor to the Yearbook of Astronomy series and has published an undergraduate textbook on distance determination in astronomy and cosmology as well as several popular science books

Marx,2016-05-31 We live in an age saturated with surveillance Our personal and public lives are increasingly on display for governments merchants employers hackers and the merely curious to see In Windows into the Soul Gary T Marx a central figure in the rapidly expanding field of surveillance studies argues that surveillance itself is neither good nor bad but that context and comportment make it so In this landmark book Marx sums up a lifetime of work on issues of surveillance and social control by disentangling and parsing the empirical richness of watching and being watched Using fictional narratives as well as the findings of social science Marx draws on decades of studies of covert policing computer profiling location and work monitoring drug testing caller identification and much more Marx gives us a conceptual

language to understand the new realities and his work clearly emphasizes the paradoxes trade offs and confusion enveloping the field Windows into the Soul shows how surveillance can penetrate our social and personal lives in profound and sometimes harrowing ways Ultimately Marx argues recognizing complexity and asking the right questions is essential to bringing light and accountability to the darker more iniquitous corners of our emerging surveillance society For more information please see www.garymarx.net *Proxistant Vision* Synne Tollerud Bull, Dragan Miletic, 2025-06-24 How the surge in aerial technologies such as drones and satellites influences visual culture beyond the screen The smooth flight from aerial overview to intimate close up in Martin Scorsese's *Hugo* 2011 exemplifies the concept of proxistant vision a combination of proximity and distance close up and overview detail and the big picture in a unified visual form In *Proxistant Vision* Synne Bull and Dragan Miletic develop the concept of proxistant vision and trace its emergence as a visual paradigm of the twenty first century As exemplified by Google Earth's digital swipe between globe perspective and street level detail proxistant vision currently proliferates across digital geography computer games architectural models data visualizations and CGI cinema It is defined as the combination of proximity and distance in a single image across a dynamic flight or zoom Pointing to the surge in aerial imaging and remote sensing technologies such as drones and satellites the book moves beyond the screen to include the kinetic architecture of rides and urban observation wheels The key objective of this study is threefold to trace the genealogy and understand the technical operation of proxistance as it traveled from periphery to center in the twenty first century to explore its alternative potentialities in contemporary art practices and finally to reflect critically on the worldviews underpinning different modalities of proxistance in times of environmental crisis The authors show how the powerful effect of combining proximity and distance which was already in place with the earliest cartographic inscriptions has taken precedence on and beyond our screens today
