

A nationwide adaptive prediction tool for coronary heart disease prevention

Tim A Holt and Lucila Ohno-Machado

SUMMARY

Standardised electronic recording of cardiovascular risk factor data collected during primary care delivery could be used to create a new strategy, using an adaptive prediction model, for targeting primary prevention interventions at high-risk individuals. In the short term, this should progressively improve data quality and allow risk modification to be monitored at the population level. In the long term, feedback of data on cardiovascular disease development might enable the model to tailor the recommended interventions more appropriately to the needs of the individual and to adapt to future changes in risk patterns. Ultimately, the inclusion of additional cardiovascular risk factors might enable a richer, more realistic picture of cardiovascular risk profiles to be uncovered. This model may have wider uses in both research and practice, and provides a further incentive for the standardisation of record keeping in primary care.

Keywords: primary prevention; number needed to screen; coronary heart disease; adaptive learning.

Introduction

THE National Service Framework (NSF) for coronary heart disease¹ recommends that patients with a greater than 30% risk of developing coronary heart disease in the following 10 years should be treated with a similar priority to those with established disease. Identifying such patients, who lack cardiovascular symptoms, presents a challenge for primary care teams, and the NSF stresses the need for a systematic rather than opportunistic service model, using electronic disease registers and standardised Read codes. There have been doubts about the quality and reliability of data collected in primary care ever since the development of large computer databases during the 1980s,² but where coding can be standardised, the ability of existing software, such as MIQUEST, to extract the data anonymously from practice databases provides the opportunity for a nationwide data collection system. Such standardisation is becoming an important means through which the goals of the NSF can be achieved.³ Patterns of cardiovascular risk among the United Kingdom (UK) population may vary in this century, as they did in the last, through changes in demography, lifestyle patterns, social conditions, modification of risk factors, and through genetic exchange with populations not adequately represented in the Framingham study,⁴ the data source on which current predictions are based. In this paper we discuss how an adaptive model might facilitate the identification of high-risk patients, progressively improve data quality, and ultimately adapt to the needs of individuals in a situation of changing coronary heart disease risk.

Adaptive predictive models

Adaptive predictive models are capable of 'learning' to classify cases according to patterns. They use existing data and classification 'gold standards' to construct a model that can predict to which class a new case belongs. They include algorithms, such as logistic regression, which was the basis for the Framingham algorithm, as well as more complex models, such as neural networks,⁵ support vector machines,⁶ and classification and regression trees.⁷ Neural networks, which are widely used in industry for pattern recognition and quality control, comprise input and output layers of processing units, between which hidden layers modify the transmission of information by attributing 'weights' to the various patterns of incoming data. Successful pattern recognition is reinforced through an increase in the weight attributed to the relevant input pattern. This is done initially by 'training' the network using an existing database, and then (if necessary) allowing the relative accuracy of future predictions to adjust the weighting mechanism in the hidden layers (Box 1).

Treating Individuals Peter M. Rothwell, 2007-08-10 Inspired by a hugely successful series entitled Treating Individuals originally published in The Lancet this volume will become essential reading for any professional involved with performance and evaluation of trials and systematic reviews or clinical patient care There are many books explaining the importance of evidence based medicine and how randomised clinical trials RCTs and systematic reviews should be performed However this is the first book to tackle the apparent conflict between the importance of evidence based decision making and the widely held view that it is often very difficult to apply the overall results of RCTs and systematic reviews to decisions about individual patients in routine clinical practice The book brings together experienced clinicians statisticians and trialists to focus on the two key questions that are most frequently asked by clinicians Is the evidence relevant to my clinical practice How can I judge whether the probability of benefit from treatment in my current patient is likely to differ substantially from the average probability of benefit reported in the relevant trial or systematic review These questions are addressed from

methodological and clinical perspectives and potential approaches to improving the targeting of treatment are considered with detailed reviews of several areas of medicine and surgery where useful progress has been made Cardiac CT Imaging
Matthew J. Budoff, Jerold S. Shinbane, 2006-09-03 CT is an accurate technique for assessing cardiac structure and function but advances in computing power and scanning technology have resulted in increased popularity It is useful in evaluating the myocardium coronary arteries pulmonary veins thoracic aorta pericardium and cardiac masses because of this and the speed at which scans can be performed CT is even more attractive as a cost effective and integral part of patient evaluation This book collates all the current knowledge of cardiac CT and presents it in a clinically relevant and practical format appropriate for both cardiologists and radiologists The images have been supplied by an experienced set of contributing authors and represent the full spectrum of cardiac CT As increasing numbers have access to cardiac CT scanners this book provides all the relevant information on this modality
