Past and Present in DeNOx Catalysis: From Molecular Modelling to Chemical Engineering Pascal Granger,Vasile Pârvulescu,2007-12-15 This book offers an overview of the state of the art in the field of DeNOx catalysis in order to focus novel orientations new technological developments from laboratory to industrial scale A particular attention has been paid towards the implementation of catalytic processes for minimising NOx emissions either from stationary or mobile sources under lean condition to meet future standard regulations of NOx emissions In the first part of this book critical aspects reported in the literature which usually make difficult the achievement of efficient catalytic technologies in those conditions are summarised and analysed in order two separate new perspectives The second part deals with fundamental aspects at molecular level A better understanding of the reactions involved under unsteady state conditions is probably a pre requisite step for improving the performances of the actual processes or developing original ones The development of powerful in situ spectroscopic techniques is of fundamental interest for kinetic modelling Correlations between spectroscopic and kinetic data with those obtained from theoretical calculations are reported Some illustrations emphasise the fact that these comparisons may help in determining the nature of the catalytic active sites and building predictive tools for simulations under running conditions The latter part of this book will be illustrated by different practical approaches covering various aspects related to the catalysts preparation and the development of alternative technologies

which include industrial considerations New technological developments for investigating catalytic reactions in transient conditions in situ and operando spectroscopic techniques Concerted approaches in DeNOx catalysis How academic aspects kinetic in situ spectroscopic measurements can provide useful information for practical applications Comparison of different approaches provided by academic and industrial partners

Plasma Processes for Renewable Energy Technologies Masaaki Okubo, 2020-01-07 The use of renewable energy is an effective solution for the prevention of global warming On the other hand environmental plasmas are one of powerful means to solve global environmental problems on nitrogen oxides NOx sulfur oxides SOx particulate matter PM volatile organic compounds VOC and carbon dioxides CO2 in the atmosphere By combining both technologies we can develop an extremely effective environmental improvement technology Based on this background a Special Issue of the journal *Energies* on plasma processes for renewable energy technologies is planned On the issue we focus on environment plasma technologies that can effectively utilize renewable electric energy sources such as photovoltaic power generation biofuel power generation wind turbine power generation etc However any latest research results on plasma environmental improvement processes are welcome for submission We are looking among others for papers on the following technical subjects in which either plasma can use renewable energy sources or can be used for renewable energy technologies Plasma decomposition technology of harmful gases such as the plasma denitrification method Plasma removal technology of harmful particles such as electrostatic precipitation Plasma decomposition technology of harmful substances in liquid such as gas liquid interfacial plasma Plasma enhanced flow induction and heat transfer enhancement technologies such as ionic wind device and plasma actuator Plasma enhanced combustion and fuel reforming Other environment plasma technologies

Energy Solutions to Combat Global Warming XinRong Zhang, Ibrahim Dincer, 2016-10-17 This book gathers an in depth collection of 45 selected papers presented at the Global Conference on Global Warming 2014 in Beijing China covering a broad variety of topics from the main principles of thermodynamics and their role in design analysis and the improvements in performance of energy systems to the potential impact of global warming on human health and wellbeing Given energy production's role in contributing to global warming and climate change this work provides solutions to global warming from the point of view of energy Incorporating multi disciplinary expertise and approaches it provides a platform for the analysis of new developments in the area of global warming and climate change as well as potential energy solutions including renewable energy energy efficiency energy storage hydrogen production CO2 capture and environmental impact assessment The research and analysis presented herein will benefit international scientists researchers engineers policymakers and all others with an interest in global warming and its potential solutions

Thermo-and Fluid-dynamic Processes in Diesel Engines James H.W. Whitelaw, Francisco Payri, Jose-Maria Desantes, 2002-01-11 This volume includes versions of papers selected from those presented at the THIESEL 2000 Conference on Thermofluidynamic Processes in

Diesel Engines held at the Universidad Politecnica de Valencia during the period of September th th 13 to 15 2000 The papers are grouped into seven thematic areas State of the Art and Prospective Fuels for Diesel Engines Injection System and Spray Formation Combustion and Pollutant Formation Modelling Experimental Techniques and Air Management These areas cover most of the technologies and research strategies that may allow Light Duty and Heavy Duty Diesel engines to comply with current and forthcoming emission standards while maintaining or improving fuel consumption The main objectives of the conference were to bring together ideas and experience from Industry and Universities to facilitate interchange of information and to promote discussion of future research and development needs The technical papers emphasised the use diagnostic and simulation techniques and their relationship to engineering practice and the advancement of the Diesel engine We hope that this approach which proved to be successful at the Conference is reflected in this volume We thank all those who contributed to the success of the Conference and particularly the members of the Advisory Committee who assessed abstracts and chaired many of the technical sessions We are also grateful to participants who presented their work or contributed to the many discussions Finally the Conference benefitted from financial support from the organisations listed below and we are glad to have this opportunity to record our gratitude
