Avé Lallemant, 1998 **Architecture of the Central Brooks Range Fold and Thrust Belt, Arctic Alaska** John S. Oldow, Hans G. Avé Lallemant, 1998-01-01 The 17 papers presented here introduce results on geological and geophysical research centred largely along a North South transect through the central Brooks Range of Arctic Alaska Investigations centre on a description of the rocks and their tectonic evolution from the foreland to the hinterland of the orogen the geometry and kinematics of contractional and extensional structures regional and local stratigraphic relations thermochronology and the deep crustal structure of the Brooks Range and parts of the North Slope and descriptions of the major lithotectonic assemblages composing the orogenic belt **Late Proterozoic to Devonian Continental Sequence, Alaska** Julie A. Pease, B. Coakley, 2018-01-03 The 5 year Circum Arctic Lithosphere Evolution CALE program developed new constraints on the tectonic history of the central Amerasia basin of the Arctic Ocean This volume is the final synthesis of the CALE program which brought together an international team of scientists to develop integrated multi disciplinary understanding of the region This approach based on the integration of much new geological and geophysical data from onshore and offshore is necessary to advance our understanding of this basin Regional onshore to offshore transects are central to the 18 papers in this volume The diverse science supporting these crust to mantle regional transects includes structural geochronological isotopic potential fields and seismic reflection and refraction data Four chapters present circum Arctic investigations by the regional CALE teams The final chapter addresses pan Arctic themes This unique collaboration relying on new data and new syntheses of existing data sheds new light on the history of the Arctic Ocean Geologic Studies in Alaska by the U.S. Geological Survey, 1998, U.S. Geological Survey, U.S. Geological Survey Professional Paper 1615, July 2000, 1998

Gough, 2000 U.S. Geological Survey Professional Paper, 1984 **Regional Geology and Tectonics: Principles of Geologic Analysis** David G. Roberts, A.W. Bally, 2012-03-26 The purpose of the series is to compile and pass on the accumulated knowledge of regional

geology that is being lost as generalists with field experience are replaced by specialists with computers. It is designed to appeal to both academic and petroleum geologists. In this third and final part of Volume One geologists discuss extensional basins including rifts, passive margins and inverted extensional basins. The chapters have a broadly similar layout and where appropriate include a section on the petroleum system. They cover non-volcanic and transform passive margins, cratonic basins on pre-Cambrian and Paleozoic basements and world maps. Annotation 2012. Book News Inc, Portland, OR, booknews.com.

Regional Geology and Tectonics David G. Roberts, A.W. Bally, 2012-12-31. Volume 1A: Principles of Geologic Analysis. A primer describing the basic concepts petroleum geologists and students need to understand hydrocarbon exploration in a broad range of geological settings globally. Volume 1B: Phanerozoic Rift Systems and Sedimentary Basins. Incorporates industry data to present regional seismic lines and cross sections to accurately document and analyze proven hydrocarbon systems. It also includes summaries of analogue and theoretical models as an essential backdrop to the structure and stratigraphy of a variety of geological settings. Volume 1C: Phanerozoic Passive Margins, Cratonic Basins and Global Tectonic Maps. Focuses on both volcanic and non-volcanic passive margins as well as cratonic basins, critical habitats for hydrocarbons. It provides a unique basis for comparison of different passive margins and for an understanding of their structural and stratigraphic evolution as well as their petroleum systems, especially useful to explorationists working in deep water basins and researchers examining the tectonic evolution of the continent-ocean transition. A vast amount of data to enable hydrocarbon play assessments and analysis on passive margins is also included in this thorough yet accessible reference. Individual volumes can also be purchased. 9780444530424, 9780444563569, 9780444563576. Volume 1A discusses in detail the principles of regional geological analysis and the main geological and geophysical tools used in basin analysis. Volume 1B features simple documentation and analysis of major rift systems developed in contrasting geological settings as well as in-depth analyses of active rifts in various regions all over the world for immediately implementable petroleum exploration applications. Volume 1C features real world case studies and analyses, useful summaries of analogue and theoretical models, thorough documentation of numerous passive margins that are the focus of deep water oil exploration and unique tectonic maps facilitating access to exact basin locations and their tectonic settings. The Nature and Tectonic Significance of Fault Zone Weakening Robert E. Holdsworth, 2001. Many faults appear to form persistent zones of weakness that fundamentally influence the distribution of architecture and movement patterns of crustal scale deformation and associated processes in both continental and oceanic regions. They act as conduits for the focused migration of economically important fluids and also constitute one of the most important global geological hazards. This book brings together papers by an international group of Earth Scientists to discuss a broad range of topics centred upon the controls of fault weakening and the role of such faults during lithosphere deformation. *New Publications of the U.S. Geological Survey*, 1998. **New**
