**A Continent for Science** Richard S. Lewis, 1965      **Globalizing Polar Science** R. Launius, J. Fleming, D. DeVorkin, 2010-11-22 The International Polar Years and the International Geophysical Year represented a remarkable international collaborative scientific effort that has been largely neglected by historians This groundbreaking collection seeks to redress that neglect and illuminate critical aspects of the last 150 years of international scientific endeavour      Science and Empire B. Bennett, J. Hodge, 2011-09-13 Offering one of the first analyses of how networks of science interacted within the British Empire during the past two centuries this volume shows how the rise of formalized state networks of science in the mid nineteenth century led to a constant tension between administrators and scientists      Denationalizing Science E. Crawford, T. Shinn, Sverker Sörlin, 2013-06-29 Present trends indicate that in the years to come transnational science whether basic or applied and involving persons equipment or funding will grow considerably The main purpose of this volume is to try to understand the reasons for this denationalization of science its historical contexts and its social forms The Introduction to the volume sets out the socio political intellectual and economic contexts for the nationalization and denationalization of the sciences processes that have extended over four centuries The articles examine the specific conditions that have given rise to the growth of transnational science in the 20th century Among these are the need for cognitive and technical standardization of scientific knowledge products pressure toward cost sharing of large installations such as CERN the voluntary and involuntary migration of scientists and the global market for R D products that has emerged at the end of the century The volume raises many new questions for research by historians and sociologists of science and poses problems that are of concern both to scientists and science policy makers      Cold Science Stephen Bocking, Daniel Heidt, 2019-03-07 Science during the Cold War has become a matter of lively interest within the historical research community attracting the attention of scholars concerned with the history of science the Cold War and environmental history The Arctic recognized as a frontier of confrontation between the superpowers and consequently central to the Cold War has also attracted much attention This edited collection speaks to this dual interest by providing innovative and authoritative analyses of the history of Arctic science during the Cold War      **Bulletin of the Atomic Scientists** , 1966-02 The Bulletin of the Atomic Scientists is the premier public resource on scientific and technological developments that impact global security Founded by Manhattan Project Scientists the Bulletin s iconic Doomsday Clock stimulates solutions for a safer world      **Fraser's Penguins** Fen Montaigne, 2010-11-09 A dramatic chronicle of Antarctica s penguins that bears witness to climate changes that foreshadow our own future The towering mountains and iceberg filled seas of the western Antarctic Peninsula have for three decades formed the backdrop of scientist Bill Fraser s study of Ad lie penguins In that time this breathtaking region has warmed faster than any place on earth with profound consequences for the Ad lies the classic tuxedoed penguin that is dependent on sea ice to survive During the Antarctic spring and summer of 2005 2006 author Fen Montaigne spent five months working on

Fraser's field team and he returned with a moving tale that chronicles the beauty of the wildest place on earth the lives of the beloved Ad lies the saga of the discovery of the Antarctic Peninsula and the story told through Fraser's work of how rising temperatures are swiftly changing this part of the world Captivated by the tale of these polar penguins and a memorable field season in Antarctica readers will come to understand that the fundamental changes Fraser has witnessed in the Antarctic will soon affect our lives

*Deep Freeze* Dian Olson Belanger, 2019-04-01 A comprehensive and lively book about the people and events that transformed Antarctica into an international laboratory for science Raimund E Goerler Chief Archivist Byrd Polar Research Center of The Ohio State University In *Deep Freeze* Dian Olson Belanger tells the story of the pioneers who built viable communities made vital scientific discoveries and established Antarctica as a continent dedicated to peace and the pursuit of science decades after the first explorers planted flags in the ice In the tense 1950s even as the world was locked in the Cold War U S scientists maintained by the Navy's Operation Deep Freeze came together in Antarctica with counterparts from eleven other countries to participate in the International Geophysical Year IGY On July 1 1957 they began systematic simultaneous scientific observations of the south polar ice and atmosphere Their collaborative success over eighteen months inspired the Antarctic Treaty of 1959 which formalized their peaceful pursuit of scientific knowledge Still building on the achievements of the individuals and distrustful nations thrown together by the IGY from mutually wary military scientific and political cultures science prospers today and peace endures Belanger draws from interviews diaries memoirs and official records to weave together the first thorough study of the dawn of Antarctica's scientific age *Deep Freeze* offers absorbing reading for those who have ventured onto Antarctic ice and those who dream of it

as well as historians scientists and policy makers A highly informative and readable narrative account of perhaps the single most striking international scientific endeavor of the twentieth century The Polar Record Deep Freeze based on countless interviews and painstaking research is a timely and gripping account John C Behrendt author of *Innocents on the Ice*

**Antarctica and the Humanities** Roberts Peder, Lize-Marié van der Watt, Adrian Howkins, 2016-08-31 The continent for science is also a continent for the humanities Despite having no indigenous human population Antarctica has been imagined in powerful innovative and sometimes disturbing ways that reflect politics and culture much further north Antarctica has become an important source of data for natural scientists working to understand global climate change As this book shows the tools of literary studies history archaeology and more can likewise produce important insights into the nature of the modern world and humanity more broadly *The Polar Regions* Adrian Howkins, 2015-11-20 The environmental histories of the Arctic and Antarctica are characterised by contrast and contradiction These are places that have witnessed some of the worst environmental degradation in recent history But they are also the locations of some of the most farsighted measures of environmental protection They are places where people have sought to conquer nature through exploration and economic development but in many ways they remain wild and untamed They are the coldest places on Earth yet have come to occupy an important role in the science and politics of global warming Despite being located at opposite ends of the planet and being significantly different in many ways Adrian Howkins argues that the environmental histories of the Arctic and Antarctica share much in common and have often been closely connected This book also argues that the Polar Regions are strongly linked to the rest of the world both through physical processes and through intellectual and political themes As places of inherent contradiction the Polar Regions have much to contribute to the way we think about environmental history and the environment more generally **Bulletin of the Atomic Scientists**, 1966-02 The Bulletin of the Atomic Scientists is the premier public resource on scientific and technological developments that impact global security Founded by Manhattan Project Scientists the Bulletin's iconic Doomsday Clock stimulates solutions for a safer world **Handbook on the Politics of Antarctica** Klaus Dodds, Alan D. Hemmings, Peder Roberts, 2017-01-27 The Antarctic and Southern Ocean are hotspots for contemporary endeavours to oversee the last frontier of the Earth The Handbook on the Politics of Antarctica offers a wide ranging and comprehensive overview of the governance geopolitics international law cultural studies and history of the region Four thematic sections take readers from the earliest human encounters to contemporary resource exploitation and climate change Written by leading experts the Handbook brings together the very best interdisciplinary social science and humanities scholarship on the Antarctic and Southern Ocean **Ice and Snow in the Cold War** Julia Herzberg, Christian Kehrt, Franziska Torma, 2018-10-19 The history of the Cold War has focused overwhelmingly on statecraft and military power an approach that has naturally placed Moscow and Washington center stage Meanwhile regions such as Alaska the polar landscapes and the cold areas of the Soviet periphery have received little attention However such environments were of no

small importance during the Cold War in addition to their symbolic significance they also had direct implications for everything from military strategy to natural resource management Through histories of these extremely cold environments this volume makes a novel intervention in Cold War historiography one whose global and transnational approach undermines the simple opposition of East and West *Bulletin of the Atomic Scientists*, 1966-02 The Bulletin of the Atomic Scientists is the premier public resource on scientific and technological developments that impact global security Founded by Manhattan Project Scientists the Bulletin's iconic Doomsday Clock stimulates solutions for a safer world

**Ecological Entanglements in the Anthropocene** Nicholas Holm, Sy Taffel, 2016-12-21 This edited collection explores the relationships between humans and nature at a time when the traditional sense of separation between human cultures and a natural wilderness is being eroded The Anthropocene whose literal translation is the Age of Man is one way of marking these planetary changes to the Earth system Global climate change and rising sea levels are two prominent examples of how nature can no longer be simply thought of as something outside and removed from humans and vice versa This collection applies the concepts of ecology and entanglement to address pressing political social and cultural issues surrounding human relationships with the nonhuman world in terms of working with nature It asks are there more or less preferable ways of working with nature What forms and practices might this work take and how do we distinguish between them Is the idea of nature even sufficient to approach such questions or do we need to reconsider using the term nature in favour of terms such as environments ecologies or the broad notion of the non human world How might we forge perspectives and enact practices which build resilience and community across species and spaces constructing relationships with nonhumans which go beyond discourses of pollution degradation and destruction Bringing together a range of contributors from across multiple academic disciplines activists and artists this book examines how these questions might help us understand and assess the different ways in which humans transform engage and interact with the nonhuman world
