No-growth Imperative Gabor Zovanyi,2013 More than two decades of mounting evidence confirms that the existing scale of the human enterprise has surpassed global ecological limits to growth Based on such limits The No Growth Imperative discounts current efforts to maintain growth through eco efficiency initiatives and smart growth programs and argues that growth is inherently unsustainable and that the true nature of the challenge confronting us now is one of replacing the current growth imperative with a no growth imperative Gabor Zovanyi asserts that anything less than stopping growth would merely slow today s dramatic degradation and destruction of ecosystems and their critical life support services Zovanyi makes the case that local communities must take action to stop their unsustainable demographic economic and urban increases as an essential prerequisite to the realization of sustainable states The book presents rationales and legally defensible strategies for stopping growth in local jurisdictions and portrays the viability of no growth communities by outlining their likely economic social political and physical features It will serve as a resource for those interested in shifting the focus of planning from growth accommodation to the creation of stable sustainable communities While conceding the challenges associated with transforming communities into no growth entities Zovanyi concludes by presenting evidence that suggests that prospects for realizing states of no growth are greater than might be assumed The U.S.-Mexican Border Environment Paul Ganster,2002 *EcoKids* Dan Chiras,2005-06-01 To forge a sustainable future we need citizens who care for the Earth We need citizens who understand that planet care is the ultimate form of self care But we also need generations who live according to their values and convictions and who can effect positive change in their lives and the lives of others Because public schools and the popular media cannot be counted on to produce an Earth friendly citizenry the task falls to parents Yet even aware parents often lack the understanding and resources to take on such a task EcoKids addresses this gap by presenting a coherent plan that will help parents foster love for nature teach children the importance of environmental protection and promote environmental values and inspire action actions that will last a lifetime A hopeful and inspiring guide for parents topics covered include ways to avoid gloom and doom in favor of positive solutions foster love and empathy for nature develop environmental values put values into action help children discover the roots of problems and be part of lasting solutions walk the talk counter the consumer culture starting in your own home and community generate hope and combat apathy Each chapter includes an inspiring case study of a child who s making a difference short pieces that highlight serious problems such as global warming along with positive solutions that can be read aloud to children and activities for children A resource guide lists helpful books articles videos and organizations **The Solar Food Dryer** Eben Fodor,2006-01-01 The Solar Food Dryer describes how to use solar energy to dry your food instead of costly electricity With your own solar powered food dryer you can quickly and efficiently dry all your extra garden veggies fruits and herbs to preserve their goodness all year long with free sunshine Applicable to a wide geography wherever gardens grow this well illustrated book includes Complete step by step plans for building a high performance low cost solar food dryer from readily

Organization Martin Parker,George Cheney,Valérie Fournier,Chris Land,2014-01-03 Despite the Great Recession slightly different forms of global capitalism are still portrayed as the only game in town by the vast majority of people in power in the world today Unbridled growth trade liberalisation and competition are advocated as the only or best ways of organizing the contemporary world Unemployment yawning gaps between rich and poor political disengagement and environmental devastation are too often seen as acceptable side effects of the dominance of neo liberalism But the reality is that capitalism has always been contested and that people have created many other ways of providing for themselves This book explores economic and organizational possibilities which extend far beyond the narrow imagination of economists and management theorists Chapters on co operatives community currencies the transition movement scrounging co housing and much more paints a rich picture of the ways in which another world is not only possible but already taking shape The aim of this companion is to move beyond complaining about the present and into exploring this diversity of organisational possibilities Our starting point is a critical analysis of contemporary global capitalism is merely the opening for thinking about organizing as a form of politics by other means and one that can be driven by the values of solidarity freedom and responsibility This comprehensive companion with an international cast of contributors gives voice to forms of organizing which remain unrepresented or marginalised in organizational studies and conventional politics yet which offer more promising grounds for social and environmental justice It is a valuable resource for students activists and researchers interested in alternative approaches to economy and society in a variety of disciplinary and interdisciplinary fields **Governing Ourselves?** Mary

Louise McAllister,2011-11-01 Popular rhetoric suggests that the twenty first century has ushered in an era of homogeneity Urbanization globalization amalgamation media conglomeration and technological convergence have become familiar terms Given the pressures of integration and assimilation how are people within communities able to make decisions about their own environment whether individually or collectively To what extent can they govern themselves Governing Ourselves explores issues of influence and power within local institutions and decision making processes using numerous illustrations from municipalities across Canada It shows how communities large and small from Toronto to Iqaluit have distinctive political cultures and therefore respond differently to changing global and domestic environments Case studies of Prince George Sherbrooke Saint John and Kitchener Waterloo are used to illuminate historical and contemporary challenges to local governance This stimulating book covers traditional topics such as government structures and institutions and intergovernmental relations It also reaches more broadly into areas of inquiry relevant to geography urban planning environmental studies public administration sociology and Canadian studies Managing for Healthy Ecosystems David J. Rapport,Bill L. Lasley,Dennis E. Rolston,N. Ole Nielsen,Calvin O. Qualset,Ardeshir B. Damania,2002-10-29 One of the critical

issues of our time is the dwindling capacity of the planet to provide life support for a large and growing human population. Based on a symposium on ecosystem health, *Managing for Healthy Ecosystems* identifies key issues that must be resolved if there is to be progress in this complex area such as: Evolving methods for regional ecosystem health assessment employing complex adaptive systems coupled with adaptive technologies to permit accurate determination of changes in regional and global environments; Issues and methods for assessing monitoring and managing diversity and its impact on human health in the context of climate change; agroecosystems restoration of forests; politics, culture and tradition. Leading thinkers in the field provide a coherent synthesis and a benchmark for the practice of this emerging field worldwide. The more than 100 peer reviewed papers are grouped into three major parts. The first, *Emerging Concepts*, explores the diverse meanings of ecosystem health within ecological, socio-economic and human health perspectives and the linkages to related concepts such as ecological integrity, sustainable development and ecological footprints. The second part, *Issues and Methods*, introduces methods for assessing and monitoring ecosystem health including strategies for gaining political and stakeholder input and support for science based ecosystem management. The final part, *Case Studies*, reports experiences of interdisciplinary teams grappling with specific issues in a variety of aquatic and terrestrial ecosystems.

A Field Guide to Sprawl Dolores Hayden, 2004. A visual lexicon of the colorful slang from alligator investment to zoomburb that defines sprawl in America. May well establish Ms Hayden as the Roger Tory Peterson of Sprawl. *New York Times*.

Remaking American Communities David C. Soule, 2007-11-01. Urban sprawl has gained much national attention in recent years. Sprawl involves not only land use issues but also legal, political and social concerns. It affects our schools, the environment and race relations. Comprehensive enough for high school students and also appropriate for college undergraduates. *Remaking American Communities* delves into the challenges of urban sprawl by turning to some of America's top thinkers on the problem including Robert Yaro, president of the Regional Plan Association. Other cutting edge essays include a foreword about the emergence of sprawl by nationally syndicated columnist Neal Peirce; views about race and class by former mayor of Albuquerque, David Rusk; and a discussion of transportation dynamics by Curtis Johnson, president of the CitiStates Group. The essays in this collection explore the core issues of sprawl and the agenda for dealing with it. Complete with a glossary, resources and contact information for smart growth alliances, this book is extremely user friendly. David C. Soule offers an unbiased viewpoint of this national phenomenon in a way that will be accessible to students and those with little background in the issue.

Water and the California Dream David Carle, 2016-05-01. In the last one hundred years, imported water has transformed the environment of the Golden State and its quality of life with land ownership patterns and real estate boosterism dramatically altering both urban and rural communities. The key to this transformation has been expanded access to water from the Eastern Sierra, the Colorado River and Northern California rivers. Whoever brings the water brings the people, wrote engineer William Mulholland, under whose leadership the process of growth through irrigation began. Now

using first person voices of Californians to reveal the resulting changes author David Carle concludes that it may be time to stop drowning the California dream of the good life with imported water Using oral histories contemporary newspaper articles and autobiographies Carle explores the historic changes in California showing how imported water has shaped the pattern of population growth in the state Because water choices remain the primary tool for shaping California s future Carle also argues that it is possible to improve both the state s damaged environment and the quality of life if Californians will step out of this historic pattern and embrace limited water supplies as a fact of life in this naturally dry region

Mark Roseland,2012-07-17 Helps citizens and their governments apply the concept of sustainable development in their communities Original The Vertical City K. Al-Kodmany,2018-06-25 Each century has its own unique approach toward addressing the problem of high density and the 21st century is no exception As cities try to cope with rapid population growth adding 2.5 billion dwellers by 2050 and grapple with destructive sprawl politicians planners and architects have become increasingly interested in the vertical city paradigm Unfortunately cities all over the world are grossly unprepared for integrating tall buildings as these buildings may aggravate multidimensional sustainability challenges resulting in a vertical sprawl that could have worse consequences than horizontal sprawl By using extensive data and numerous illustrations this book provides a comprehensive guide to the successful and sustainable integration of tall buildings into cities A new crop of skyscrapers that employ passive design strategies green technologies energy saving systems and innovative renewable energy offers significant architectural improvements At the urban scale the book argues that planners must integrate tall buildings with efficient mass transit walkable neighbourhoods cycling networks vibrant mixed use activities iconic transit stations attractive plazas well landscaped streets spacious parks and engaging public art Particularly it proposes the Tall Building and Transit Oriented Development TB TOD model as one of the sustainable options for large

cities going forward Building on the work of leaders in the fields of ecological and sustainable design this book will open readers eyes to a wider range of possibilities for utilizing green resilient smart and sustainable features in architecture and urban planning projects The 20 chapters offer comprehensive reading for all those interested in the planning design and construction of sustainable cities **Urban Research Monitor** ,1998
