Thacker asks us to consider the relationship of these three entities and argues that by their existence and their interrelationships they are fundamentally redefining the notion of biological life itself. Biological science and the biotech industry are increasingly organized at a global level in large part because of the use of the Internet in exchanging biological data. International genome sequencing efforts, genomic databases, the development of World Intellectual Property policies, and the borderless business of biotech are all evidence of the global intersections of biology and informatics of genetic codes and computer codes. Thacker points out the internal tension in the very concept of biotechnology: the products are more tech than bio, but the technology itself is fully biological, composed of the biomaterial labor of genes, proteins, cells, and tissues. Is biotechnology a technology at all, he asks, or is it a notion of life itself that is inseparable from its use in the biotech industry? The three sections of the book cover the three primary activities of biotechnology today: the encoding of biological materials into digital form as in bioinformatics and genomics; its recoding in various ways, including the biocolonialism of mapping genetically isolated ethnic populations; and the newly pervasive concern over biological security and its decoding back into biological materiality as in tissue engineering and regenerative medicine. Thacker moves easily from science to philosophy to political economics, enlivening his account with ideas from such thinkers as Georges Bataille, Georges Canguilhem, Michel Foucault, Antonio Negri, and Paul Virilio. The global genome says Thacker makes it impossible to consider biotechnology without the context of globalism.

Regional Spillovers from the Venezuelan Crisis Jorge Alvarez, Mr. Marco Arena, Alain Brousseau, Mr. Hamid Faruquee, Emilio William Fernandez Corugedo, Mr. Jaime Guajardo, Gerardo Peraza, Juan Yepez, 2022-12-05. As a new migration crisis is unfolding in Europe because of the war in Ukraine, the purpose of this paper is to also highlight the ongoing migration crisis in Latin America and the Caribbean (LAC) due to Venezuela's economic collapse. The stock of Venezuelan migrants reached 5 million in 2019, most of which had settled in other LAC countries. Following a temporary halt during the pandemic, migration from Venezuela has resumed, with the stock of migrants reaching 6.1 million in 2021. These migration flows are expected to continue in the coming years, which can strain public services and labor markets in the recipient economies in LAC. This Departmental Paper focuses on migration spillovers from the Venezuelan economic and social crisis. It sheds light on how migration can raise GDP growth and affect fiscal and external positions in host countries. It also discusses policy options, including greater support for education and integration into the workforce, which could help migrants find jobs to match their skills and help raise growth prospects in recipient countries.
