

Differential Operators

- ❖ Let $dy/dx = Dy$. This symbol D is called a *differential operator*.

We define an n th-order differential operator as

$$L = a_n(x)D^n + a_{n-1}(x)D^{n-1} + \cdots + a_1(x)D + a_0(x) \quad (8)$$

In addition, we have

$$L\{\alpha f(x) + \beta g(x)\} = \alpha L(f(x)) + \beta L(g(x)) \quad (9)$$

so the differential operator L is a *linear operator*.

❖ Differential Equations

We can simply write the n -th order linear DEs as

$$L(y) = 0 \text{ and } L(y) = g(x)$$

Solving PDEs in C++ Yair Shapira, 2012-06-07 In this much expanded second edition author Yair Shapira presents new applications and a substantial extension of the original object oriented framework to make this popular and comprehensive book even easier to understand and use It not only introduces the C and C programming languages but also shows how to use them in the

numerical solution of partial differential equations PDEs The book leads readers through the entire solution process from the original PDE through the discretization stage to the numerical solution of the resulting algebraic system The high level of abstraction available in C is particularly useful in the implementation of complex mathematical objects such as unstructured mesh sparse matrix and multigrid hierarchy often used in numerical modeling The well debugged and tested code segments implement the numerical methods efficiently and transparently in a unified object oriented approach Iteration Theory - Proceedings Of The European Conference C Simo,Christian Mira,Gyoergy Targonski,Norbert Netzer,1991-07-22 The main topics of this proceedings stress the interactions between the theory of functional equations and the theory of dynamical systems A total of 38 invited lectures are included *Integral Equations and Iteration Methods in Electromagnetic Scattering* A.
