River Basins and Coastal Systems Planning Within the U.S. Army Corps of Engineers National Research Council, Division on Earth and Life Studies, Water Science and Technology Board, Ocean Studies Board, Committee to Assess

the U.S. Army Corps of Engineers Methods of Analysis and Peer Review for Water Resources Project Planning, Panel on River Basin and Coastal Systems Planning, 2004-08-18 The U S Army Corps of Engineers the Corps has played a large and important role in shaping water resources systems in the United States since Congress first tasked it in 1824 to improve navigation on the Ohio and Mississippi Rivers Since then rivers have been modified for navigation and flood control harbors have been dredged for shipping and coastlines are routinely fortified against erosion and beach loss Recent decades have seen an overall decline in budgets for civil works project construction yet the range of objectives for water resources projects has broadened as society places more value on environmental and recreational benefits Thus the Corps portfolio of water resources projects has changed considerably There is a reduced emphasis on traditional construction projects and an increased focus on maintenance and reoperation of existing projects such as locks dams and levees and on environmental restoration projects An integrated approach to water resources planning at the scale of river basins and coastal systems is widely endorsed by the academic and engineering communities The Corps mission expertise and experience give it immense potential to alter the structure and functioning of the nation s waterways and coasts As might be expected in a large and complex organization answering to a range of public and private demands implementation of these new policies and objectives is neither consistent nor complete River Basins and Coastal Systems Planning within the U S Army Corps of Engineers recommends improvements in the Corps water resource project planning and review process This report compares economic and environmental benefits and costs over a range of time and space scales suggests multiple purpose formulation and evaluation methods and recommends integration of water development plans with other projects in the region

Water Resource Systems Planning and Management Daniel P. Loucks, Eelco van Beek, 2017-03-02 This book is open access under a CC BY NC 4 0 license This revised updated textbook presents a systems approach to the planning management and operation of water resources infrastructure in the environment Previously published in 2005 by UNESCO and Deltares Delft Hydraulics at the time this new edition written again with contributions from Jery R Stedinger Jozef P M Dijkman and Monique T Villars is aimed equally at students and professionals It introduces readers to the concept of viewing issues involving water resources as a system of multiple interacting components and scales It offers guidelines for initiating and carrying out water resource system planning and management projects It introduces alternative optimization simulation and statistical methods useful for project identification design siting operation and evaluation and for studying post planning issues The authors cover both basin wide and urban water issues and present ways of identifying and evaluating alternatives for addressing multiple purpose and multi objective water quantity and quality management challenges Reinforced with cases studies exercises and media supplements throughout the text is ideal for upper level undergraduate and graduate courses in water resource planning and management as well as for practicing planners and engineers in the field

Governing Integrated Water Resources Management Oliver Fritsch, David Benson, 2020-01-23 Integrated Water

Resources Management IWRM has become a global paradigm for the governance of surface coastal and groundwaters This Special Issue contains twelve articles related to the transfer of IWRM policy principles The articles explore three dimensions of transfer causes processes outcomes and offer a theoretically inspiring methodologically rich and geographically diverse engagement with IWRM policy transfer around the globe As such they can also productively inform a future research agenda on the dimensional aspects of IWRM governance Regarding the causes the contributions apply criticise extend or revise existing approaches to policy transfer in a water governance context asking why countries adopt IWRM principles and what mechanisms are in place to understand the adoption of these principles in regional or national contexts When it comes to processes articles in this Special Issue unpack the process of policy transfer and implementation and explore how IWRM principles travel across borders levels and scales Finally this set of papers looks into the outcomes of IWRM policy transfer and asks what impact IWRM principles once implemented gave on domestic water governance water quality and water supply and how effective IWRM is at addressing critical water issues in specific countries

U.S. Army Corps of Engineers Water Resources Planning National Research Council, Division on Earth and Life Studies, Ocean Studies Board, Water Science and Technology Board, Committee to Assess the U.S. Army Corps of Engineers Methods of Analysis and Peer Review for Water Resources Project Planning, Coordinating Committee, 2004-09-19 From the Executive Summary There are some concerns that the current Corps planning and construction budget has not kept pace with expanding national water management needs for flood hazard management water transportation and other purposes At the same time others question the wisdom of and budgetary prospects for the continuation of a traditional water project construction program Debates about water use and funding priorities now extend to intense scrutiny of Corps of Engineers planning investment and project operations programs
