The Science of Open Spaces Charles G. Curtin, 2015-07-23 Since the days of the American Frontier our management policies have promoted a one size fits all mentality for large complex landscapes Landscape ecologist Charles Curtin argues that instead we need a science based approach that accounts for the dynamic nature of complex systems and gives local stakeholders a say in their futures The Science of Open Spaces proposes that we return to first principles fundamental physical laws of the universe and think about complex systems from the ground up based on modern scientific theory backed up by practical experience Curtin walks us through foundational concepts of thermodynamics ecology

sociology and resilience theory applying them to real world examples from years he has spent designing large scale place based collaborative research programs in the United States and around the world

Sustainable Fishery Systems Anthony Charles, 2008-04-30 This book provides a comprehensive attempt to adopt an integrated interdisciplinary approach to the study of fisheries Fisheries are discussed as holistic systems with emphasis on their structure operation and dynamics The book's interdisciplinary approach is applied to an analysis of problems faced in pursuing sustainable fisheries with emphasis

on six dominant themes sustainability uncertainty complexity conflict fishing rights and the nature of management Within this discussion several major directions in current fishery thinking are explored notably the precautionary approach the ecosystem approach co management and robust management for resilient fisheries *Social-Ecological Resilience and Law* Ahjond S. Garmestani, Craig R. Allen, 2014-02-25 Environmental law envisions ecological systems as existing in an equilibrium state reinforcing a rigid legal framework unable to absorb rapid environmental changes and innovations in sustainability For the past four decades resilience theory which embraces uncertainty and nonlinear dynamics in complex adaptive systems has provided a robust invaluable foundation for sound environmental management Reforming American law to incorporate this knowledge is the key to sustainability This volume features top legal and resilience scholars speaking on resilience theory and its legal applications to climate change biodiversity national parks and water law **Structured Decision Making** Robin Gregory, Lee Failing, Michael Harstone, Graham Long, Tim McDaniels, Dan Ohlson, 2012-02-17 This book outlines the creative process of making environmental management decisions using the approach called Structured Decision Making It is a short introductory guide to this popular form of decision making and is aimed at environmental managers and scientists This is a distinctly pragmatic label given to ways for helping individuals and groups think through tough multidimensional choices characterized by uncertain science diverse stakeholders and difficult tradeoffs This is the everyday reality of environmental management yet many important decisions currently are made on an ad hoc basis that lacks a solid value based foundation ignores key information and results in selection of an inferior alternative Making progress in a way that is rigorous inclusive defensible and transparent requires combining analytical methods drawn from the decision sciences and applied ecology with deliberative insights from cognitive psychology facilitation and negotiation The authors review key methods and discuss case study examples based in their experiences in communities boardrooms and stakeholder meetings The goal of this book is to lay out a compelling guide that will change how you think about making environmental decisions Visit www.wiley.com/go/gregory to access the figures and tables from the book **Freshwater Fisheries Ecology** John F. Craig, 2016-01-12 Inland fisheries are vital for the livelihoods and food resources of humans worldwide but their importance is underestimated probably because large numbers of small local operators are involved Freshwater Fisheries Ecology defines what we have globally what we are going to lose and mitigate for and what given the right tools we can save To estimate potential production the dynamics of freshwater ecosystems rivers lakes and estuaries need to be understood These dynamics are diverse as are the earth's freshwater fisheries resources from boreal to tropical regions and these influence how fisheries are both utilized and abused Three main types of fisheries are illustrated within the book artisanal commercial and recreational and the tools which have evolved for fisheries governance and management including assessment methods are described The book also covers in detail fisheries development providing information on improving fisheries through environmental and habitat evaluation enhancement and rehabilitation aquaculture genetically modified fishes and

sustainability The book thoroughly reviews the negative impacts on fisheries including excessive harvesting climate change toxicology impoundments barriers and abstractions non native species and eutrophication Finally key areas of future research are outlined Freshwater Fisheries Ecology is truly a landmark publication containing contributions from over 100 leading experts and supported by the Fisheries Society of the British Isles The global approach makes this book essential reading for fish biologists fisheries scientists and ecologists and upper level students in these disciplines Libraries in all universities and research establishments where biological and fisheries sciences are studied and taught should have multiple copies of this hugely valuable resource About the Editor John Craig is Editor in Chief of the Journal of Fish Biology and has an enormous range of expertise and a wealth of knowledge of freshwater fishes and their ecology having studied them around the globe including in Asia North America Africa the Middle East and Europe His particular interests have been in population dynamics and life history strategies He is a Fellow of the Linnean Society of London and the Royal Society of Biology

The Subjugation of Canadian Wildlife Max Foran, 2018-04-10 Hardly a day goes by without news of the extinction or endangerment of yet another animal species followed by urgent but largely unheeded calls for action An eloquent denunciation of the failures of Canada's government and society to protect wildlife from human exploitation Max Foran's *The Subjugation of Canadian Wildlife* argues that a root cause of wildlife depletions and habitat loss is the culturally ingrained beliefs that underpin management practices and policies Tracing the evolution of the highly contestable assumptions that define the human wildlife relationship Foran stresses the price wild animals pay for human self interest Using several examples of government oversight at the federal provincial and territorial levels from the Species at Risk Act to the Biodiversity Strategy Protected Areas Network and provincial management plans this volume shows that wildlife policies are as much or more about human needs priorities and profit as they are about preservation Challenging established concepts including ecological integrity adaptive management sport hunting as conservation and the flawed belief that wildlife is a renewable resource the author compels us to recognize animals as sentient individuals and as integral components of complex ecological systems A passionate critique of contemporary wildlife policy *The Subjugation of Canadian Wildlife* calls for belief change as the best hope for an ecologically healthy wildlife rich Canada

Managing Natural Resources for Development in Africa Washington Odongo Ochola, P. C. Sanginga, Isaac Bekalo, 2010 The complex and dynamic interlinks between natural resource management NRM and development have long been recognized by national and international research and development organizations and have generated voluminous literature However much of what is available in the form of university course books practical learning manuals and reference materials in NRM is based on experiences from outside Africa *Managing Natural Resources for Development in Africa* A Resource Book provides an understanding of the various levels at which NRM issues occur and are being addressed scientifically economically socially and politically The book's nine chapters present state of the art perspectives within a holistic African context The book systematically navigates

the tricky landscape of integrated NRM with special reference to Eastern and Southern Africa against the backdrop of prevailing local national regional and global social economic and environmental challenges The authors wide experience the rich references made to emerging challenges and opportunities and the presentation of different tools principles approaches case studies and processes make the book a rich and valuable one stop resource for postgraduate students researchers policymakers and NRM practitioners The book is designed to help the reader grasp in depth NRM perspectives and presents innovative guidance for research design and problem solving including review questions learning activities and recommended further reading The book was developed through a writeshop process by a multi disciplinary team of lecturers from the University of Nairobi Egerton University Kenyatta University the University of Zimbabwe the University of Malawi Makerere University and the University of Dar es Salam In addition selected NRM experts from regional and international research organizations including the World Agroforestry Center ICRAF the Africa Forest Forum RUFORUM IIRR and the International Development Research Centre IDRC participated in the writeshop and contributed material to the book
