Addiction Entries And Exits:

Addiction Jon Elster, 1999-10-28 *Addiction* focuses on the emergence nature and persistence of addictive behavior as well as the efforts of addicts to overcome their condition Do addicts act of their own free will or are they driven by forces beyond their control Do structured treatment programs offer more hope for recovery What causes relapses to occur Recent scholarship has focused attention on the voluntary aspects of addiction particularly the role played by choice *Addiction* draws upon this new research and the investigations of economists psychiatrists philosophers neuropharmacologists historians and sociologists to offer an important new approach to our understanding of addictive behavior The notion that addicts favor present rewards over future gains or penalties echoes throughout the chapters in *Addiction* The effect of cultural values and beliefs on addicts and on those who treat them is also explored particularly in chapters by Elster on alcoholism and by Aker on American heroin addicts in the 1920s and 1930s Essays by Gardner and by Waal and M rland discuss the neurobiological roots of addiction Among their findings are evidence that addictive drugs also have an important effect on areas of the central nervous system unrelated to euphoria or dysphoria and that tolerance and withdrawal phenomena vary greatly from drug to drug The plight of addicts struggling to regain control of their lives receives important consideration in *Addiction* Elster Skog and O Donoghue and Rabin look at self administered therapies ranging from behavioral modifications to cognitive techniques and discuss conditions under which various treatment strategies work Drug based forms of treatment are discussed by Gardner drawing on work that suggests that parts of the population have low levels of dopamine inducing a tendency toward sensation seeking There are many different explanations for the impulsive self destructive behavior that is addiction By bringing the triple perspective of neurobiology choice and culture to bear on the phenomenon *Addiction* offers a unique and valuable source of information and debate on a problem of world wide proportions *Trade-Offs* Harold Winter, 2023-09-29 The highly engaging introduction to thinking like an economist updated for a new generation of readers When economists wrestle with any social issue be it unemployment inflation healthcare or crime and punishment they do so impersonally The big question for them is what are the costs and benefits or trade offs of the solutions to such matters These trade offs constitute the core of how economists see the world and make the policies that govern it *Trade Offs* is an introduction to the economic approach of analyzing controversial policy issues A useful introduction to the various factors that inform public opinion and policymaking *Trade Offs* is composed of case studies on topics drawn from across contemporary law and society Intellectually stimulating yet accessible and entertaining *Trade Offs* will be appreciated by students of economics public policy health administration political science and law as well as by anyone following current social policy debates *Handbook of Developmental Social Neuroscience* Michelle de Haan, Megan R. Gunnar, 2011-06-23 Recent years have seen an explosion of research into the physiological and neural bases of social behavior This state of the science handbook is unique in approaching the topic from a developmental perspective Exploring the dynamic relationship

between biology and social behavior from infancy through adolescence leading investigators discuss key processes in typical and atypical development Chapters address emotion motivation person perception interpersonal relationships developmental disorders and psychopathology The volume sheds light on how complex social abilities emerge from basic brain circuits whether there are elements of social behavior that are hard wired in the brain and the impact of early experiences Illustrations include 8 color plates *Neuroethics and Consciousness* Larsson Publishing & Consulting,2015-03-31 This special issue of Res Cogitans is dedicated to the problems of neuroethics i e the ethics of brain research and its applications Most of the authors of the papers are philosophers and bioethicists and their approach is conceptual and normative rather than purely empirical although many empirical matters are also considered in the papers This collection grew out of a workshop on Neuroethics and Consciousness that took place in Turku Finland in August 20 21 2010 Obesity, Business and Public Policy Zoltán J. Ács,2010-01-01 The effects of obesity have become practically ubiquitous in the US This book aims to provide an alternative framework through which to explore the important and controversial obesity debate that has spilled over from the medical community This book is not about obesity as a medical condition nor does it offer a wide ranging discussion on the health effects of obesity or the role of the right diet **LifeCrafting** Bradley R. E. Wright,Cathryn Entner Wright,2023-10-19 Would you like to live a more fulfilling life A life marked by closeness to God love for others self care and productive purpose Just about any life improvement requires one thing changing behavior You ll either have to start a new behavior refine an old one or stop an unwanted behavior altogether The decision to change behavior can be daunting because changing habits and routines is often difficult Changes can bring about good but they can also upend usual ways of doing things This book guides you in how to change just about any behavior for what the apostle Paul called a more excellent way The guidance is rooted in cutting edge social science research joined with Christian understanding of the good life and how to achieve it From this blended perspective the book presents a general model for how you can effectively change your behavior It gives you dozens of practical proven strategies that you can start using right away What s the secret to behavior change It happens best when a person combines several strategies First they start small Next they find ways to motivate themselves and to cultivate their spiritual gift of self control Finally in all steps they invite Christ into the process through Scripture prayer and fellowship Imagine what your life would be like if you could better match what you do daily to what matters most to you both now and eternally Matching your behavior to your core values with God alongside is the key to creating a truly beautiful life *Addiction and Choice* Nick Heather,Gabriel Segal,2016-09-22 The central problem in the study of addiction is to explain why people repeatedly behave in ways they know are bad for them For much of the previous century and until the present day the majority of scientific and medical attempts to solve this problem were couched in terms of involuntary behavior if people behave in ways they do not want then this must be because the behavior is beyond their control and outside the realm of choice An opposing tradition which finds current support among scientists and scholars as

well as members of the general public is that so called addictive behavior reflects an ordinary choice just like any other and that the concept of addiction is a myth The editors and authors of this book tend to take neither view There has been an increasing recognition in recent literature on addiction that restricting possible conceptions of it to either of these extreme positions is unhelpful and is retarding progress on understanding the nature of addiction and what could be done about it This book contains a range of views from philosophy neuroscience psychiatry psychology and the law on what exactly this middle ground between free choice and no choice consists of and what its implications are for theory practice and policy on addiction The result amounts to a profound change in our thinking on addiction and how its devastating consequences can be ameliorated *Addiction and Choice* is a thought provoking new volume for all those with an interest in this global issue

Agency and Answerability Gary Watson, 2004-07-15 to follow **Time and Decision** George Loewenstein, Daniel Read, Roy F. Baumeister, 2003-02-27 How do people decide whether to sacrifice now for a future reward or to enjoy themselves in the present Do the future gains of putting money in a pension fund outweigh going to Hawaii for New Year s Eve Why does a person s self discipline one day often give way to impulsive behavior the next *Time and Decision* takes up these questions with a comprehensive collection of new research on intertemporal choice examining how people face the problem of deciding over time Economists approach intertemporal choice by means of a model in which people discount the value of future events at a constant rate A vacation two years from now is worth less to most people than a vacation next week Psychologists on the other hand have focused on the cognitive and emotional underpinnings of intertemporal choice *Time and Decision* draws from both disciplinary approaches to provide a comprehensive picture of the various layers of choice involved Shane Frederick George Loewenstein and Ted O Donoghue introduce the volume with an overview of the research on time discounting and focus on how people actually discount the future compared to the standard economic model Alex Kacelnik discusses the crucial role that the ability to delay gratification must have played in evolution Walter Mischel and colleagues review classic research showing that four year olds who are able to delay gratification subsequently grow up to perform better in college than their counterparts who chose instant gratification The book also delves into the neurobiology of patience examining the brain structures involved in the ability to withstand an impulse Turning to the issue of self control Klaus Wertenbroch examines the relationship between consumption and available resources showing for example how a high credit limit can lead people to overspend Ted O Donoghue and Matthew Rabin show how people s awareness of their self control problems affects their decision making The final section of the book examines intertemporal choice with regard to health drug addiction dieting marketing savings and public policy All of us make important decisions every day many of which profoundly affect the quality of our lives *Time and Decision* provides a fascinating look at the complex factors involved in how and why we make our choices so many of them short sighted and helps us understand more precisely this crucial human frailty Oxford Studies in Agency and Responsibility Volume 8 Santiago Amaya, David

Shoemaker, Manuel Vargas, 2024-03 Oxford Studies in Agency and Responsibility is a forum for outstanding new work in an area of vigorous and broad ranging debate in philosophy and beyond What is involved in human action Can philosophy and science illuminate debate about free will How should we answer questions about responsibility for action *A Moral Defense of Recreational Drug Use* Rob Lovering, 2015-08-12 Why does American law allow the recreational use of some drugs such as alcohol tobacco and caffeine but not others such as marijuana cocaine and heroin The answer lies not simply in the harm the use of these drugs might cause but in the perceived morality or lack thereof of their recreational use Despite strong rhetoric from moral critics of recreational drug use however it is surprisingly difficult to discern the reasons they have for deeming the recreational use of some drugs morally wrong In this book Rob Lovering lays out and dissects various arguments for the immorality of using marijuana cocaine heroin and other drugs recreationally He contends that by and large these arguments do not succeed Lovering's book represents one of the first works to systematically present analyze and critique arguments for the moral wrongness of recreational drug use Given this as well as the popularity of the morality based defense of the United States drug laws this book is an important and timely contribution to the debate on the recreational use of drugs Breakdown of Will George Ainslie, 2001-03-19 Ainslie argues that our responses to the threat of our own inconsistency determine the basic fabric of human culture He suggests that individuals are more like populations of bargaining agents than like the hierarchical command structures envisaged by cognitive psychologists The forces that create and constrain these populations help us understand so much that is puzzling in human action and interaction from addictions and other self defeating behaviors to the experience of willfulness from pathological over control and self deception to subtler forms of behavior such as altruism sadism gambling and the social construction of belief This book integrates approaches from experimental psychology philosophy of mind microeconomics and decision science to present one of the most profound and expert accounts of human irrationality available It will be of great interest to philosophers and an important resource for professionals and students in psychology economics and political science **Eating Behavior and Obesity** Shahram Heshmat, 2011-06-10 Print CourseSmart **Behavioral Economics and Its Applications** Peter Diamond, Hannu Vartiainen, 2012-01-12 In the last decade behavioral economics borrowing from psychology and sociology to explain decisions inconsistent with traditional economics has revolutionized the way economists view the world But despite this general success behavioral thinking has fundamentally transformed only one field of applied economics finance Peter Diamond and Hannu Vartiainen's Behavioral Economics and Its Applications argues that behavioral economics can have a similar impact in other fields of economics In this volume some of the world's leading thinkers in behavioral economics and general economic theory make the case for a much greater use of behavioral ideas in six fields where these ideas have already proved useful but have not yet been fully incorporated public economics development law and economics health wage determination and organizational economics The result is an attempt to set the agenda of an important development in

economics an agenda that will interest policymakers sociologists and psychologists as well as economists Contributors include Ian Ayres B Douglas Bernheim Truman F Bewley Colin F Camerer Anne Case Michael D Cohen Peter Diamond Christoph Engel Richard G Frank Jacob Glazer Seppo Honkapohja Christine Jolls Botond Koszegi Ulrike Malmendier Sendhil Mullainathan Antonio Rangel Emmanuel Saez Eldar Shafir Sir Nicholas Stern Jean Tirole Hannu Vartiainen and Timothy D Wilson

Righteousness, Volume 2 Jeffrey J. Niehaus, 2023-10-19 The second volume of this three volume work exegetes and comments on every occurrence of the Hebrew terms for righteousness in the Old Testament It begins with a discussion of apperception and deductive method and concludes with an afterword on righteousness and ontology The ontological argument affirms that God's aseity is the foundation of righteousness in the Bible and thus of all true righteousness Righteousness is being true to God and God is always true to himself including in his self existence Other terms in the righteous word group such as righteous and justify are considered along with the important word pair righteousness and justice in semantic domain studies in the first three chapters Semantic domain studies show that terms like upright blameless and good are qualifiers of righteousness Whatever the flavor or nuance of the terms for righteousness may be in different OT contexts however study shows that the underlying sense of righteousness is conformity to God's Being and doing and the same is true of the righteousness of God

Structures of Agency Michael E. Bratman, 2007-01-04 This is a collection of published and unpublished essays by distinguished philosopher Michael E Bratman of Stanford University They revolve around his influential theory known as the planning theory of intention and agency Bratman's primary concern is with what he calls strong forms of human agency including forms of human agency that are the target of our talk about self determination self government and autonomy These essays are unified and cohesive in theme and will be of interest to philosophers in ethics and metaphysics

Explaining Social Behavior Jon Elster, 2007-04-30 This book is an expanded and revised edition of the author's critically acclaimed volume Nuts and Bolts for the Social Sciences In twenty six succinct chapters Jon Elster provides an account of the nature of explanation in the social sciences He offers an overview of key explanatory mechanisms in the social sciences relying on hundreds of examples and drawing on a large variety of sources psychology behavioral economics biology political science historical writings philosophy and fiction Written in accessible and jargon free language Elster aims at accuracy and clarity while eschewing formal models In a provocative conclusion Elster defends the centrality of qualitative social sciences in a two front war against soft literary and hard mathematical forms of obscurantism

Higher Education under Late Capitalism Jeffrey R. Di Leo, 2017-02-07 This book explores questions concerning personal identity and individual conduct within neoliberal academe The author suggests that neoliberal academe is normal academe in the new millennium though well aware of its contested nature and destructive capacities Examining higher education through a number of ideals such as austerity and transparency brings readers on a journey into its present as well as its past If some of these ideals can be identified and critiqued there is a chance that the foundations of neoliberal academe can be weakened

This book actively pursues pathways out of the neoliberal abyss and offers that demanding a role for pleasure in higher education may be one of them

Economic Theory and Cognitive Science Don Ross, 2007-01-26 In this study Don Ross explores the relationship of economics to other branches of behavioral science asking in the course of his analysis under what interpretation economics is a sound empirical science The book explores the relationships between economic theory and the theoretical foundations of related disciplines that are relevant to the day to day work of economics the cognitive and behavioral sciences It asks whether the increasingly sophisticated techniques of microeconomic analysis have revealed any deep empirical regularities whether technical improvement represents improvement in any other sense Casting Daniel Dennett and Kenneth Binmore as its intellectual heroes the book proposes a comprehensive model of economic theory that Ross argues does not supplant but recovers the core neoclassical insights and counters the caricaturish conception of neoclassicism so derided by advocates of behavioral or evolutionary economics Because he approaches his topic from the viewpoint of the philosophy of science Ross devotes one chapter to the philosophical theory and terminology on which his argument depends and another to related philosophical issues Two chapters provide the theoretical background in economics one covering developments in neoclassical microeconomics and the other treating behavioral and experimental economics and evolutionary game theory The three chapters at the heart of the argument then apply theses from the philosophy of cognitive science to foundational problems for economic theory In these chapters economists will find a genuinely new way of thinking about the implications of cognitive science for economics and cognitive scientists will find in economic behavior a new testing site for the explanations of cognitive science

Human Behavior, Learning, and the Developing Brain Donna Coch, Kurt W. Fischer, Geraldine Dawson, 2010-06-15 This volume brings together leading authorities from multiple disciplines to examine the relationship between brain development and behavior in typically developing children Presented are innovative cross sectional and longitudinal studies that shed light on brain behavior connections in infancy and toddlerhood through adolescence Chapters explore the complex interplay of neurobiological and environmental influences in the development of memory language reading inhibitory control and other core aspects of cognitive emotional and social functioning Throughout the volume gives particular attention to what the research reveals about ways to support learning and healthy development in all children Illustrations include four pages in full color
