Signal Transduction in the Cardiovascular System in Health and Disease Ashok K. Srivastava, Madhu B.

Anand-Srivastava, 2008-10-17 Signal Transduction in Cardiovascular System Health and Disease highlights the major contributions of different signaling systems in modulating normal cardiovascular functions and how a perturbation in these signaling events leads to abnormal cell functions and cardiovascular disorders This title is volume 3 in the new Springer series Advances in Biochemistry in Health and Disease

Hypertensive Cardiovascular Disease: Pathophysiology and Treatment A. Amery, R. Fagard, P. Lijnen, J. Staessen, 2012-12-06 Hypertension is a major world wide health problem With high blood pressure there is a greater risk of stroke heart attack heart failure kidney disease and renal failure Far too few people realize what the risks are and what can be done to prevent these risks even in the countries where programs in hypertension research are active and the full significance of hypertension is best understood Some studies of the known hypertensive population indicate that one half or less are receiving adequate treatment and of those on therapy only half have their high blood pressure satisfactorily controlled These realizations emphasize the need to inform all segments of society throughout the world on the importance of detection and control of high blood pressure The great incidence of hypertension makes it of paramount importance that all practicing physicians have available the latest information on diagnosis and treatment of hypertensive cardiovascular disease This treatise on hypertension arrives at a time when there is an increasing recognition the world over of the importance of detecting and treating high blood pressure The book has been edited by Dr A Amery and his associates in the University of Leuven Professor Amery is one of the leaders in the field of hypertension and serves on the Council of the International Society of Hypertension

Isolated Adult Cardiomyocytes Hans Michael Piper, Gerrit Isenberg, 2019-07-17 First published in 1989 written with contributions from experts who have critically evaluated the state of the art and the prospects of isolated adult cardiac myocytes in cardiological research this two volume publication summarizes the current knowledge of this technology The methodology structure and metabolism of cardiomyocytes are presented along with metabolism and cation homeostasis and energy metabolism and hypoxic injury Additionally cell isolation and culture and the structure and biochemistry of the sarcolemma is explained Electrophysiology and contractile function with ionic currents and membrane channels is discussed Also the electrophysiological effects of transmitters and hormones are presented with excitation contraction coupling and the use of cardiomyocytes in drug design and research explained

New Aspects of the Role of Adrenoceptors in the Cardiovascular System H. Grobecker, A. Philippu, K. Starke, 2012-12-06 This volume is the product of a symposium held on 14-16 February 1985 in Hamburg in honour of the 65th birthday of Prof Hans Joachim Schumann Schumann was born on 28 December 1919 in Stralsund He studied medicine in Cologne Greifswald and Rostock The chair of pharmacology in Rostock was held at that time by Peter Holtz It was he who first introduced Schumann to pharmacology in 1944 and who was his Doktorvater research supervisor

After the war Schumann again worked with Holtz in Rostock and then in Frankfurt am Main. He received decisive stimuli during a research fellowship in 1956 in Prof J H Burn's department in Oxford where he also worked with Prof H Blaschko. In 1964 he accepted his present position as ordentlicher full Professor and Head of the Institute of Pharmacology and Toxicology of the then newly founded Medical Faculty of Essen. He has remained in Essen despite being offered the chair of pharmacology in Göttingen in 1968. It is interesting to observe how in the main lines of his scientific work which now spans 40 years Schumann has followed the steps involved in autonomic neuro transmission from transmitter release to transmitter receptor interaction.

Alpha and Beta Adrenoceptors and the Cardiovascular System Walter Kobinger, 1984 Catecholamines and Heart Disease Pallab K. Ganguly, 2024-12-20 A concise in depth analysis of the status of the sympathetic system in heart diseases. This book summarizes the functional status of the sympathetic neural system in cardiological diseased states and highlights aspects of sympathetic neural activity that are important to an overall understanding of the pathophysiology process. Critical reviews of methods for evaluating sympathetic activity are discussed existing data is closely scrutinized and attempts are made to delineate the factors derived from increased sympathetic activity. The book provides a physiologically and clinically based approach to the investigation of the involvement of catecholamines in cardiovascular diseases which makes it a valuable addition to the reference collections of researchers clinical scientists and graduate students.

Excitation-Contraction Coupling and Cardiac Contractile Force Donald Bers,1993-08-31 The main aim of this monograph is to provide an overview of calcium regulation

in cardiac muscle cells particularly with respect to excitation contraction coupling and the control of cardiac contractile force. It is my hope that this book will be useful to students of the cardiovascular system and muscle at all different levels and in different disciplines such as physiology, biochemistry, pharmacology and pathophysiology. I also hope that it will find use for those studying developmental, comparative and disease processes as well as more integrative phenomena. I kept several goals in mind in writing this monograph. First it should be easily readable. Second I chose to include numerous illustrations and tables to help integrate results from numerous investigators in practical formats and also present key figures from important papers. Thus this monograph may serve as a resource of information for people working in the areas described herein. Third the presentation is a very personal one and I have necessarily drawn extensively on my personal experience in this field over the past 15 years. This I think helps maintain a certain continuity of thought from chapter to chapter. Fourth I have made serious attempts to make each chapter up to date despite the breadth of topics covered. I have also tried to be equitable in choosing references while not intending to be comprehensive or exhaustive. Neither of these aims can be perfectly matched and I apologize to the many investigators whose papers I have not cited but should have. Heart Failure Johann Bauersachs, Javed Butler, Peter Sandner, 2017-06-09. This special issue of the Handbook of Experimental Pharmacology on Heart Failure covers the entire spectrum of the field from the current understanding and definitions of heart failure to epidemiology and the importance of co-morbidities, clinical trial design and biomarkers as well as imaging technologies. The main focus of this book is to review current and emerging heart failure therapies and potential targets for treatment.
