

SMOKING TRIGGERS AND COPING 101

What are triggers? A trigger is anything that you associate with smoking, or that leads you to crave a cigarette, like feeling stressed, drinking coffee, or driving.

Here are some ideas to help you cope with triggers and cravings:

The 5Ds

When you feel a strong need to smoke, try the 5Ds.

DELAY: Try to delay smoking for as long as you can. Set a timer for five minutes. If you **still** feel the urge, try to delay smoking for another five minutes. Cravings will pass, and **will** get shorter and weaker over time.

DISTRACT: Do something that requires concentration—play a game, browse the Internet, text and/or call a friend, engage in a hobby, or get started on a project.

DEEP BREATHING: Practice deep breathing. Close your eyes and begin by breathing in through your nose expanding your stomach. Exhale slowly through your mouth.

DRINK WATER: Drink a glass of cold water to change the feeling in your mouth and to keep your hands busy.

DISCUSS: Talk to someone you trust like a friend or counsellor. You can also try to take some time to self-reflect. Think about what could have triggered the feeling that you need to smoke and how you can cope with this situation in the future.

Kato, Traci Mann, 2007-07-27 The field of health psychology has grown dramatically in the last decade with exciting new developments in the study of how psychological and psychosocial processes contribute to risk for and disease sequelae for a variety of medical problems In addition the quality and effectiveness of many of our treatments and health promotion and disease prevention efforts have been significantly enhanced by the contributions of health psychologists Taylor 1995 Unfortunately however much of the theorizing in health psychology and the empirical research that derives from it continue to reflect the mainstream bias of psychology and medicine both of which have a primary focus on white heterosexual middle class American men This bias pervades our thinking despite the demographic heterogeneity of American society U S Bureau of the Census 1992 and the substantial body of epidemiologic evidence that indicates significant group differences in health status burden of morbidity and mortality life expectancy quality of life and the risk and protective factors that contribute to these differences in health outcomes National Center for Health Statistics 1994 Myers Kagawa Singer Kumanyika Lex Castro Coe Gutierrez Chesney Nealey this volume **The Smoke-Free Smoke Break** Pavel G Somov, Marla Somova, 2011-12-01 The Smoke Free Smoke Break is a groundbreaking approach to smoking cessation that helps readers learn to replace smoking with mindfulness craving control and cognitive restructuring techniques that help readers reduce tobacco use gradually at their own pace Because the ritual and habit of smoking can be as addictive as nicotine itself this book allows readers to continue taking smoke free smoke breaks using tobacco free relaxation methods *Women, Work, and Health* Marianne Frankenhaeuser, Ulf Lundberg, Margaret Chesney, 2012-12-06 Until recently studies of women's health received scant research attention in the context of the overall magnitude of research conducted on health Even for health issues that affect both men and women most research has been limited to male subjects leaving a large gap in our knowledge base concerning women's health Finally the decade of the 1990s is ushering in a shift in this inequity In 1990 the U S National Institutes of Health issued a compelling report citing the lack of sufficient research on women's health as a major gap in our knowledge

and a mandate has been issued to add women as study subjects in research or to document why they have not been included. Such directives will undoubtedly lead to a much needed burgeoning of research activities in the area of women's health as we approach the twenty first century. Despite limited research resources however there have been steady scientifically rigorous voices in the wilderness for the last several years and many of the best investigators are represented in this volume. These workers have led the vanguard in exploring psychosocial factors that are likely to differentially affect women's and men's health. For example women and men engage in social roles that often differ if not in quantity then certainly in quality. Sex differences in role expectations environmental qualities role burdens related to the domains of work and family and abilities to adapt to and cope with stressful situations may have a distinctive impact on health.

Pain and Chemical Dependency Howard Smith, Steven Passik, 2008-04-25 Both pain and addiction are tremendous public health problems Practitioners of every stripe say that they learned precious little about pain or addiction in their training and readily admit that instruction on the interface of pain and addiction is nonexistent The recent problem of prescription drug abuse has only served to highlight the fact that these two worlds need unification those who treat pain must be informed about the risks of controlled substances and those who treat addiction need to better and more fully understand their benefits Nowhere is the pooled knowledge of pain management and addiction medicine brought together to allow for a greater appreciation of the risks of addiction when treating people with pain and the pain problems of those with chemical dependency This major new volume brings this vast knowledge base together presenting an array of perspectives by the foremost thought leaders at the interface of pain and chemical dependency and is the most comprehensive resource on the subject to date There have been an increasing number of seminars devoted to this topic and a new society The International Society on Pain and Chemical Dependency has recently been formed and this volume is destined to become the classic text on this multidisciplinary subject It will appeal to anesthesiologists neurologists rehab physicians palliative care staff pain center physicians and psychologists

The Clinical Management of Nicotine Dependence James A. Coccores, 2012-12-06 The 1980s have seen a remarkable degree of public and professional acceptance of cigarette smoking as the most widespread and devastating form of drug dependence More medical schools now give required courses about drug dependence Prestigious journals publish reports of investigations on the subject of nicotine dependence and more conferences and workshops are held each year on various aspects of nicotine dependence All this is in sharp contrast to the earlier prevailing atmosphere of disinterest ignorance or professional disdain These changes created an obvious place for a textbook oriented primarily toward the needs of clinicians working with patients who have nicotine

dependence Thus in preparation of this book most aspects of the management of nicotine dependence are incorporated in order to address concerns of physicians in training and other health care professionals across the world The final product which I believe to be comprehensive and clinically relevant throughout is a text that I hope will be of equal use to psychologists social workers nurses counselors and physicians in all specialties An encyclopedic treatise was deliberately avoided because that approach can be cumbersome in size readability and cost and for that reason readers will find little mention of data involving animal research nicotine related politics nicotine product advertising medical consequences of smoking psychotherapeutic techniques and the extent of the problem
