Core Competencies For Neurologists What Clinicians Need To Know:

Core Competencies for Psychiatric Practice Stephen C. Scheiber, Thomas A. Kramer, ABPN, 2008-08-13 The practice of medicine has changed radically during the past few decades Patients better informed than ever now demand more of their physicians viewing them as partners rather than revering them as sole decision makers In this environment nonnegotiable core competencies ever evolving and measured by certification recertification and more recently maintenance of certification are more important than ever Written from the perspective of those responsible for educating and certifying the next generations of psychiatrists this groundbreaking compendium by distinguished contributors offers for the first time a concise look at the final product of the June 2001 Invitational Core Competencies Conference sponsored by the American Board of Psychiatry and Neurology ABPN as regards psychiatry with a future comparable publication focusing on neurology Divided into four parts Part I sets the stage for the current concept of physician competence by presenting a brief history of medical competence explaining the logic behind the development of the current competence outline Part II provides two different views of how to look at core competencies how competence is defined by the Royal College of Physicians and Surgeons of Canada and based on some of their work what is currently being done in the United States Part III discusses the organizing principles identified in 1999 by the Accreditation Council for Graduate Medical Education ACGME and the American Board of Medical Specialties ABMS that frame all of our conversations about competence as currently delineated for psychiatrists across the six core competency categories Patient Care Medical Knowledge Interpersonal and Communications Skills Practice Based Learning and Improvement Professionalism and Systems Based Practice Also presented are discussions of when in a physician's career these competencies should be assessed and what methodologies would be appropriate for that assessment Part IV discusses how the psychiatry core competencies are changing board certification and recertification Also presented are informed predictions about the changes that medical school faculty and residency training directors will have to make and how practitioners will have to change behaviors to maintain their board certification Concluding with an appendix outlining the six core competencies for psychiatry this invaluable resource will both help psychiatric residents and their faculty and training directors understand the core competencies important to the ABPN and provide practitioners with a view of what will be contained in their upcoming maintenance of certification programs now being designed **Practical**

Achieving Equity in Neurological Practice Bruce Ovbiagele, Sharon Lewis, Daniel José Correa, Reena Thomas, Larry Charleston IV, 2024-10-22 The recent high profile murders of George Floyd and other African American individuals along with the prevailing coronavirus disease COVID 19 pandemic have reinforced the notion that certain marginalized populations have worse health outcomes than other populations likely due to unequal and unjust policies and practices Neurological processes and prognoses frequently vary by sex gender race ethnicity socioeconomic status and geographic location In particular individuals of lower socioeconomic status and from minority racial and ethnic backgrounds have worse neurological health and often receive a

lower standard of neurological care These inequities in neurological outcomes are attributed to wider societal social influences which impact how people live and how neurology is practiced Published evidence suggests that healthcare providers and the healthcare system contribute to inequities in neurological care for vulnerable and underserved populations However educating neurology care providers about these issues and training them to provide equitable care for these patients can potentially improve neurology care access delivery and outcomes In this book we provide the theoretical background scientific evidence and experiential knowledge warranted to properly care for vulnerable underserved patients with neurological diseases at the levels of the provider and system This book examines the root causes of neurological health inequities across a broad range of topics and offers possible solutions for achieving neurological health equity Initial chapters help to frame the overall issue of neurological health equity Subsequent chapters evaluate neurological health equity from the clinical practice standpoint with a focus on select populations and subspecialty care delivery settings Lastly we discuss the bigger picture with regard to the pipeline of practitioners and purview of policy makers This text is relevant for neurology residents and fellows multidisciplinary neurological care practitioners neurologists neurosurgeons advanced practice providers hospitalists emergency physicians critical care physicians pharmacists and allied health personnel and public health researchers and health policy makers The book is divided into three sections Principles Neurological Conditions and Priorities The first section establishes the framework and explains various key terminologies and concepts which undergird the care of vulnerable and undeserved patient populations The second section Neurological Conditions covers key neurological diseases by sub specialty describing published evidence of care and outcome disparities gaps in knowledge practical techniques for bridging these disparities on provider and system levels The third section Priorities identifies important areas of focus and improvement targeting trainees researchers community partners stakeholder organizations and policy makers which would be crucial for implementing sustained societal level enhancements in the neurological health of these vulnerable populations

Rehabilitation Medicine Core Competencies Curriculum Adrian Cristian, 2014-09-04 Built around the six core competencies for physicians practicing rehabilitation medicine as required by the ACGME Physical Medicine and Rehabilitation Patient Centered Care Mastering the Competencies is a unique self directed text for residents Covering all aspects of patient centered care in the practice of physical medicine and rehabilitation the book provides a competency based approach to topics and conditions commonly encountered in this specialty Thoughtfully organized

chapters offer easy to access clinical content for all major practice areas and the book's competency based goals and objectives also serve as a clear platform for educating physiatrists in training during their clinical rotations. The first part of the book presents the foundations of the core competencies: medical knowledge, professionalism, patient care, practice based learning and improvement, system based practice, and interpersonal and communication skills, with basic principles for application and also includes chapters on implementing educational milestones, core professional education principles, and building leadership skills. In the second part, experts in the field apply these core competencies to the management of common conditions including stroke, spinal cord and brain injury, amputation and prosthetics, musculoskeletal disorders, multiple sclerosis, and much more. Each of these chapters identifies goals and objectives for each competency and concludes with a representative case study and self assessment questions with answers and explanations. The book also provides references to key articles and links to internet based educational materials. Practical tips, how to and where to guides, key points, tables, and charts also help to maintain current knowledge and competency in the many areas that comprise the field of PM R. The book will be a valuable asset to physiatrists in training, program directors, and teaching faculty in rehabilitation medicine training programs and for continuing professional development.

Key Features: Addresses core competencies for rehabilitation medicine physicians as required by the ACGME. Covers all major physiatric practice areas with facts, concepts, goals, and objectives following the competency model. Grounded in a holistic, patient centered approach. Presents sample case studies with discussion points and self assessment questions with answer key and explanations for each area to track progress and build clinical acumen.
