

The primary contribution of this book is that it accomplishes its stated intent to "focus concerted attention, from a variety of theoretical perspectives, on corporal punishment, and thus to help fill a significant lacuna in the research literature" (p. 6). In doing this, Donnelly and Straus have contributed a seminal and long-overdue text that all researchers of corporal punishment will want to read and reference to maintain credibility in the field.

Scholars contributing to this book were charged to "define corporal punishment from the perspective of a particular theory, identify those aspects of corporal punishment that the theory is most adequate to explain, and relate the theory at hand to other theories" (p. 7). Most of the authors ably fulfilled the first two components of the assignment. Unfortunately, only a third offered explicit comparisons of their theory with other theories in the volume, and the editors offered no concluding chapter to assist readers in integrating the many approaches.

The book has 20 chapters, loosely organized into comparative, psychological, and sociological approaches. Major theories applied include Ecological perspective, Evolutionary biology, Grid-group, Ethology, Attachment, Behavioral, Rational choice, Moral development (as outlined by Piaget and Kohlberg), Psychoanalytic, Communication, Conflict, Control (as formulated by Travis Hirschi and Michael Gottfredson), Social bonds, Exchange, Stress, Social control (as developed by Black), and Family Systems.

The second major contribution of this volume is that it legitimizes the examination of corporal punishment as a parenting strategy with both maladaptive and adaptive sequelae. Although none of the authors characterize themselves as pro-corporal punishment—and many make a point to stand against it—others are forthright in acknowledging that corporal punishment may play an adaptive role in some circumstances.

Central to this more comprehensive treatment of corporal punishment is the inclusion of evolutionary theorists in the debate. Lynn Fairbanks and Michael McGuire (chap. 3) supply a provocative account of vervet monkeys' use of customary physical punishment to balance the competing needs of parents and offspring and to regulate sibling rivalry. This adaptive function is extended to humans in a *must-read* contribution by Patricia Crittenden (chap. 6) who argues that touch (both affectionate and disciplinary) is
