Molony,Tomaso Fortibuoni,Simone Libralato,Pierre Failler,2022-03-15 *SDG 14: Life Below Water* Sergio Rossi,2022-11-23 This book focuses in seven chapters on the perspectives and solutions that different research groups offer to try to address problems related to SDG 14 Life Below Water The different objectives

developed in SDG 14 are treated independently with an attempt to give a global vision of the issues. The mechanism used to select the book's content was through an Artificial Intelligence program choosing articles related to the topics by means of keywords. The program selected those articles and those that were not related to the topic or did not focus on SDG 14 were discarded by a subject matter expert. Obviously, the selection was partial and the entire subject is not covered, but the final product gives a very solid idea of how to orient ourselves to delve deeper into the topic of SDG 14 using published chapters and articles. The AI program itself selected the text of these contributions to show the progress in different topics related to SDG 14. This mode of operation will allow specialists and non specialists to collect useful information for their specific research purposes in a short period of time. At a time when information is essential in order to move quickly by providing concrete answers to complex problems, this type of approach will become essential for researchers, especially for a subject as vast as SDG 14.

Transitioning to Sustainable Life below Water Werner Ekau, Anna-Katharina Hornidge, 2022-04-08. The ocean plays a central role in the life and development of humankind. Besides space for navigation and trade, roughly 10 billion tons of commodities are transported across the oceans each year. The provision of biological and

non living resources is the most important service of the marine ecosystems Yet these ecosystems are increasingly impeded by human activities and interventions Human and naturally induced changes in climate are buffered by the ocean but its capacity to compensate the increase of CO₂ in the atmosphere is at its limit The increase of global temperatures and the decrease of oxygen concentration and pH are severe stressors for aquatic species and thus for the whole ecosystem Urbanisation and population growth at the coast along with severe levels of pollution are stressing coastal environments and hampering or interrupting life cycles of species as well as the well established and naturally balanced internal interconnections within and between ecosystems Mining for oil and gas is interfering with fisheries competing for space with other sectors and increasing the risks for large scale pollution The result is a decline in ecosystem services and a negative feedback into the socio economic systems The recent reports by IPBES and IPCC underline the degrading conditions in which the ecosystems are situated today The IPBES report evaluates a number of direct and indirect drivers Population increase technical development malfunctioning of governance and spreading of conflicts affect direct drivers such as sea use change direct exploitation climate change pollution invasive species and others Following a series of summits and conventions that prompted the United Nations in recent decades Rio de Janeiro in 1992 Johannesburg in 2002 and Rio 20 in 2012 all of which were rather land based the Sustainable Development Goals 2015 set a new landmark in which the ocean too was finally acknowledged as significant to global development The Ocean Conference in New York in June 2017 led the international community to formulate clear goals for the development of the ocean The volume Transitioning to Sustainable Life below Water will address critical issues in ocean use and reflect against goals and targets of SDG 14 and other relevant SDGs Transitioning to Sustainable Life below Water is part of MDPI s new Open Access book series Transitioning to Sustainability With this series MDPI pursues environmentally and socially relevant research which contributes to efforts toward a sustainable world Transitioning to Sustainability aims to add to the conversation about regional and global sustainable development according to the 17 SDGs The book series is intended to reach beyond disciplinary even academic boundaries The chapters listed below are pre publication chapters and the final page numbers will be assigned once the book is published as a whole For citation purposes cite each article independently as indicated below Author 1 and Author 2 2021 Chapter Title in Transistioning to Sustainable Life below Water Edited by Werner Ekau and Anna Katharina Hornidge
