## **Bromeliaceae Profile Of An Adaptive Radiation:**

**Bromeliaceae** David H. Benzing, 2000-04-06 This book covers bromeliad biology rather than cultivation *Physiological Ecology of Tropical Plants* Ulrich Lüttge, 2007-12-14 Since the publication of the first edition of this book ten years ago international research into the physiological ecology of plants in the tropics has increased enormously in quantity and quality This brand new edition brings the story right up to date New approaches have been developed in remote sensing while at the other end of the scale molecular biology has come on in leaps and bounds particularly regarding ecological performance of tropical plants e g in understanding the adaptation of resurrection plants to the extreme habitat of inselbergs In this fully revised and updated second edition the wealth of new information has made it necessary to break large chapters down into smaller ones

**Plants on Plants - The Biology of Vascular Epiphytes** Gerhard Zotz, 2016-09-01 This book critically reviews advances in our understanding of the biology of vascular epiphytes since Andreas Schimper's 1888 seminal work It addresses all aspects of their biology from anatomy and physiology to ecology and evolution in the context of general biological principles By comparing epiphytes with non epiphytes throughout it offers a valuable resource for researchers in plant sciences and related disciplines A particular strength is the identification of research areas that have not received the attention they deserve with conservation being a case in point Scientists have tended to study pristine systems but global developments call for information on epiphytes in human disturbed systems and the response of epiphytes to global climate change

**Flowering Plants** Armen Takhtajan, 2009-07-06 Armen Takhtajan is among the greatest authorities in the world on the evolution of plants This book culminates almost sixty years of the scientist's research of the origin and classification of the flowering plants It presents a continuation of Dr Takhtajan's earlier publications including *Systema Magnoliophytorum* 1987 in Russian and *Diversity and Classification of Flowering Plants* 1997 in English In his latest book the author presents a concise and significantly revised system of plant classification Takhtajan system based on the most recent studies in plant morphology embryology phytochemistry cytology molecular biology and palynology Flowering plants are divided into two classes class Magnoliopsida or Dicotyledons includes 8 subclasses 126 orders c 440 families almost 10 500 genera and no less than 195 000 species and class Liliopsida or Monocotyledons includes 4 subclasses 31 orders 120 families more than 3 000 genera and about 65 000 species This book contains a detailed description of plant orders and descriptive keys to plant families providing characteristic features of the families and their differences

**Genetic Diversity in Plants** Mahmut Caliskan, 2012-03-14 Genetic diversity is of fundamental importance in the continuity of a species as it provides the necessary adaptation to the prevailing biotic and abiotic environmental conditions and enables change in the genetic composition to cope with changes in the environment Genetic Diversity in Plants presents chapters revealing the magnitude of genetic variation existing in plant populations The increasing availability of PCR based molecular markers allows the detailed analyses and evaluation of genetic diversity in plants and also the detection of genes influencing economically important

traits The purpose of the book is to provide a glimpse into the dynamic process of genetic variation by presenting the thoughts of scientists who are engaged in the generation of new ideas and techniques employed for the assessment of genetic diversity often from very different perspectives The book should prove useful to students researchers and experts in the area of conservation biology genetic diversity and molecular biology *Evolution and Biodiversity of Wild Polyploids* Elvira Hörandl,Natascha D. Wagner,Karol Marhold,Christoph Oberprieler,2021-09-28 **Seedling Ecology and Evolution** Mary Allestree Leck,V. Thomas Parker,Robert Simpson,2008-09-18 Seedlings are highly sensitive to their environment After seeds they typically suffer the highest mortality of any life history stage This book provides a comprehensive exploration of the seedling stage of the plant life cycle It considers the importance of seedlings in plant communities environmental factors with special impact on seedlings the morphological and physiological diversity of seedlings including mycorrhizae the relationship of the seedling with other life stages seedling evolution and seedlings in human altered ecosystems including deserts tropical rainforests and habitat restoration projects The diversity of seedlings is portrayed by including specialised groups like orchids bromeliads and parasitic and carnivorous plants Discussions of physiology morphology evolution and ecology are brought together to focus on how and why seedlings are successful This important text sets the stage for future research and is valuable to graduate students and researchers in plant ecology botany agriculture and conservation

**Progress in Botany Vol. 83** Ulrich Lüttge,Francisco M. Cánovas,María-Carmen Risueño,Christoph Leuschner,Hans Pretzsch,2022-10-31 With one volume each year this series keeps scientists and advanced students informed of the latest developments and results in all areas of the plant sciences This latest volume includes reviews on plant physiology biochemistry genetics and genomics forests and ecosystems *Air Plants* David H. Benzing,2012-04-10 Often growing far above the ground air plants or epiphytes defy many of our common perceptions about plants The majority use their roots only for attachment in the crowns of larger usually woody plants or to objects such as rocks and buildings and derive moisture and nutrients from the atmosphere and by collecting falling debris Only the mistletoes are true parasites Epiphytes are not anomalies and there are approximately 28 000 species about 10 percent of the higher or vascular plants that grow this way Many popular houseplants including numerous aroids bromeliads ferns and orchids rank among the most familiar examples In *Air Plants* David H Benzing takes a reader on a tour of the many taxonomic groups to which the epiphytes belong and explains in nontechnical language the anatomical and physiological adaptations that allow these plants to conserve water thrive without the benefit of soil and engage in unusual relationships with animals such as frogs and ants Benzing's comprehensive account covers topics including ecology evolution photosynthesis and water relations mineral nutrition reproduction and the nature of the forest canopy as habitat for the free living and parasitic epiphytes It also pays special attention to important phenomena such as adaptive trade offs and leaf economics Drawing on the author's deep experience with epiphytes and the latest scientific research this book is accessible to readers unfamiliar with technical botany it features

a lavish illustration program references a glossary and tables

**Perspectives in Biophysical Plant Ecophysiology** Erick De La Barrera, William K. Smith, 2009 Park S Nobel pioneered the coupling of cellular physical chemistry with plant physiology providing a sound physicochemical interpretation of the laws of diffusion to a rapidly expanding field of plant physiological ecology His classical textbook is the only one of its kind to provide an extensive array of quantitative problems and solutions in the field of plant biophysics and ecophysiology extending from the molecular to the ecological level In this festschrift former graduate students and postdocs as well as colleagues of Prof Nobel present a series of reviews that include scales from sub cellular to global and topics that range from desert succulent biology to the physiology of alpine plants encompassing basic research and applications in agronomy and conservation biology This state of the field survey provides current and useful information for professionals and graduate students while illustrating the broad span of the influence that Nobel s career has had on modern ecophysiology

The Evolutionary Strategies that Shape Ecosystems J. Philip Grime, Simon Pierce, 2012-03-26 THE EVOLUTIONARY STRATEGIES THAT SHAPE ECOSYSTEMS In 1837 a young Charles Darwin took his notebook wrote I think and then sketched a rudimentary stick like tree Each branch of Darwin s tree of life told a story of survival and adaptation adaptation of animals and plants not just to the environment but also to life with other living things However more than 150 years since Darwin published his singular idea of natural selection the science of ecology has yet to account for how contrasting evolutionary outcomes affect the ability of organisms to coexist in communities and to regulate ecosystem functioning In this book Philip Grime and Simon Pierce explain how evidence from across the world is revealing that beneath the wealth of apparently limitless and bewildering variation in detailed structure and functioning the essential biology of all organisms is subject to the same set of basic interacting constraints on life history and physiology The inescapable resulting predicament during the evolution of every species is that according to habitat each must adopt a predictable compromise with regard to how they use the resources at their disposal in order to survive The compromise involves the investment of resources in either the effort to acquire more resources the tolerance of factors that reduce metabolic performance or reproduction This three way trade off is the irreducible core of the universal adaptive strategy theory which Grime and Pierce use to investigate how two environmental filters selecting respectively for convergence and divergence in organism function determine the identity of organisms in communities and ultimately how different evolutionary strategies affect the functioning of ecosystems This book reflects an historic phase in which evolutionary processes are finally moving centre stage in the effort to unify ecological theory and animal plant and microbial ecology have begun to find a common theoretical framework Companion website This book has a companion website [www.wiley.com/go/grime/evolutionarystrategies](http://www.wiley.com/go/grime/evolutionarystrategies) with Figures and Tables from the book for downloading

*Heating with Wolves, Cooling with Cacti* Negin Imani, Brenda Vale, 2021-12-30 This book describes the detailed process behind the development of a comprehensive thermo bio architectural framework the ThBA This framework systematically connects the thermal

performance requirements of a building to relevant solutions found in the natural world This is the first time that architecture has been connected to biology in this manner The book provides an in depth understanding of thermoregulatory strategies in animals and plants and links these to equivalent solutions in architectural design The inclusion of this fundamental knowledge along with the systematic process of accessing it should open up new avenues for the generation of energy efficient and sustainable buildings

*Tropical Tree Physiology* Guillermo Goldstein, Louis S. Santiago, 2016-03-04 This book presents the latest information on tropical tree physiology making it a valuable research tool for a wide variety of researchers It is also of general interest to ecologists e g Ecological Society of America 3000 or 4000 members at annual meeting physiologists e g American Society of Plant Biologists 2 000 members at annual meeting and tropical biologists e g Association for Tropical Biology and Conservation ATBC 500 members at annual meeting American Geophysical Union AGU 20000 members at annual meeting Since plant physiology is taught at every university that offers a life sciences forestry or agricultural program and physiology is a focus at research institutes and agencies worldwide the book is a must have for university and research institution libraries

**Neotropical Biogeography** Juan J. Morrone, 2017-04-07 Neotropical Biogeography Regionalization and Evolution presents the most comprehensive single source treatment of the Neotropical region derived from evolutionary biogeographic studies The book provides a biogeographic regionalization based on distributional patterns of plant and animal taxa discusses biotic relationships drawn from track and cladistic biogeographic analyses and identifies cenocrons subsets of taxa within biotas identified by their common origin and evolutionary history It includes maps area cladograms and vegetation profiles The aim of this reference is to provide a biogeographic regionalization that can be used by graduate students researchers and other professionals concerned with understanding and describing distributional patterns of plants and animals in the Neotropical region It covers the 53 biogeographic provinces of the Neotropical region that are classified into the Antillean Brazilian and Chacoan subregions and the Mexican and South American transition zones

*The Ornaments of Life* Theodore H. Fleming, W. John Kress, 2013-10-03 The average kilometer of tropical rainforest is teeming with life it contains thousands of species of plants and animals As *The Ornaments of Life* reveals many of the most colorful and eye catching rainforest inhabitants toucans monkeys leaf nosed bats and hummingbirds to name a few are an important component of the infrastructure that supports life in the forest These fruit and nectar eating birds and mammals pollinate the flowers and disperse the seeds of hundreds of tropical plants and unlike temperate communities much of this greenery relies exclusively on animals for reproduction Synthesizing recent research by ecologists and evolutionary biologists Theodore H Fleming and W John Kress demonstrate the tremendous functional and evolutionary importance of these tropical pollinators and frugivores They shed light on how these mutually symbiotic relationships evolved and lay out the current conservation status of these essential species In order to illustrate the striking beauty of these ornaments of the rainforest the authors have included a series of breathtaking color plates and full color

graphs and diagrams      *Temporal and Large-Scale Spatial Patterns of Plant Diversity and Diversification* Dimitar Dimitrov, Danilo M. Neves, Xiaoting Xu, 2022-06-14      **Advances in Ecological Research**, 2003-01-07 Advances in Ecological Research presents a wide range of papers on all aspects of ecology Topics include the physiology populations and communities of plants and animals as well as landscape and ecosystem ecology The evolutionary ecology of carnivorous plants Trophic interactions in population cycles of voles and lemmings Scale effects and extrapolation in ecological experiments      *Defensive (anti-herbivory) Coloration in Land Plants* Simcha Lev-Yadun, 2016-10-20 This book presents visual plant defenses camouflage mimicry and aposematism via coloration morphology and even movement against herbivores It is mainly an ideological monograph a manifesto representing my current understanding on defensive plant coloration and related issues The book is not the final word in anything but rather the beginning of many things It aims to establish visual anti herbivory defense as an integral organ of botany or plant science as it is commonly called today I think that like in animals many types of plant coloration can be explained by selection associated with the sensory cognitive systems of herbivores and predators to reduce herbivory It is intended to intrigue and stimulate students of botany plant science and plant animal interactions for a very long time This book is tailored to a readership of biologists and naturalists of all kinds and levels and more specifically for botanists ecologists evolutionists and to those interested in plant animal interactions It is written from the point of view of a naturalist ecologist and evolutionary biologist that I hold considering natural selection as the main although not the only drive for evolution According to this perspective factors such as chance founder effects genetic drift and various stochastic processes that may and do influence characters found in specific genotypes are not comparable in their power and influence to the common outcomes of natural selection especially manifested when very many species belonging to different plant families with very different and separate evolutionary histories arrive at the same adaptation something that characterizes many of the visual patterns and proposed adaptations described and discussed in this book Many of the discussed visual defensive mechanisms are aimed at operating before the plants are damaged i e to be their first line of defense In this respect I think that the name of the book by Ruxton et al 2004 Avoiding Attack is an excellent phrase for the assembly of the best types of defensive tactics While discussing anti herbivory I do remember study and teach physiological developmental aspects of some of the discussed coloration patterns and I am fully aware of the simultaneous and diverse functions of many plant characters in addition to defense      **Ecology of Freshwater Nematodes** Walter Traunspurger, 2021-07-16 Nematodes are incontestably the most numerous and the most diverse metazoans in freshwater habitats and these properties bestow exceptional significance to their role in the environment An array of functional roles has been attributed to them they are grazers on bacteria and primary producers regulators of decomposition of plant material predators prey for other animals and closely associated symbionts of bacteria and other organisms Freshwater nematodes are central in the context of environmental monitoring pollution assessments global warming and food webs and this is

increasingly being recognized Moreover the short generation time a few days to months of many species makes nematodes ideal for laboratory studies This book offers guidelines for studying the ecology of free living nematodes including detailed protocols and case studies      Biomimetics Yoseph Bar-Cohen,2016-04-19 A review of the current state of the art of biomimetics this book documents key biological solutions that provide a model for innovations in engineering and science Leading experts explore a wide range of topics including artificial senses and organs mimicry at the cell materials interface modeling of plant cell wall architecture biomimetic composites artificial muscles biomimetic optics and the mimicking of birds insects and marine biology The book also discusses applications of biomimetics in manufacturing products medicine and robotics biologically inspired design as a tool for interdisciplinary education and the biomimetic process in artistic creation
