James Baldwin once declared that a black man can look at a map of the United States contemplate the area south of the Mason Dixon Line and thus scare himself to death In *The Scary Mason Dixon Line* renowned literary scholar Trudier Harris explores why black writers whether born in Mississippi New York or elsewhere have consistently both loved and hated the South Harris explains that for these authors the South represents not so much a place or even a culture as a rite of passage Not one of them can consider himself or herself a true African American writer without confronting the idea of the South in a decisive way Harris considers native born black southerners Raymond Andrews Ernest J Gaines Edward P Jones Tayari Jones Yusef Komunyakaa Randall Kenan and Phyllis Alesia Perry and nonsouthern writers James Baldwin Sherley Anne Williams and Octavia E Butler The works Harris examines date from Baldwin s *Blues for Mr Charlie* 1964 to Edward P Jones s *The Known World* 2003 By including Komunyakaa s poems and Baldwin s play as well as male and female authors Harris demonstrates that the writers preoccupation with the South cuts across lines of genre and gender Whether their writings focus on slavery migration from the South to the North or violence on southern soil and whether they celebrate the triumph of black southern heritage over repression or castigate the South for its treatment of blacks these authors cannot escape the call of the South Indeed Harris asserts that creative engagement with the South represents a defining characteristic of African American writing A singular work by one of the foremost literary scholars writing today *The Scary Mason Dixon Line* superbly demonstrates how history and memory continue to figure powerfully in African American literary creativity **AI and Law** Aurelia Tamo-Larrieux, Clement Guitton, Simon Mayer, 2025-02-28 This book provides insights into how AI is changing legal practice government processes and individuals access to those processes encouraging each of us to consider how technological advances are changing the legal system Particularly and distinct from current debates on how to regulate AI this books focuses on how the progressive merger between computational methods and legal rules changes the very structure and application of the law itself We investigate how automation is changing the legal analysis legal rulemaking legal rule extraction and application of legal rules and how this impacts individuals policymakers civil servants and society at large We show through many examples that a debate on how automation is changing the law is needed which must revolve around the democratic legitimacy of the automation of legal processes and be informed by the technical feasibility and tradeoffs of specific endeavors Studying Virtual Math Teams Gerry Stahl, 2010-05-03 *Studying Virtual Math Teams* centers on detailed empirical studies of how students in small online groups make sense of math issues and how they solve problems by making meaning together These studies are woven together with materials that describe the online environment and pedagogical orientation as well as reflections on the theoretical implications of the findings in the studies The nature of group cognition and shared meaning making in collaborative learning is a foundational research issue in CSCL More generally the theme of sense making is a central topic in information science While many authors allude to these topics few have provided this kind of detailed analysis of the mechanisms of intersubjective meaning making This book presents a

coherent research agenda that has been pursued by the author and his research group The book opens with descriptions of the project and its methodology as well as situating this research in the past and present context of the CSCL research field The core research team then presents five concrete analyses of group interactions in different phases of the Virtual Math Teams research project These chapters are followed by several studies by international collaborators discussing the group discourse the software affordances and alternative representations of the interaction all using data from the VMT project The concluding chapters address implications for the theory of group cognition and for the methodology of the learning sciences In addition to substantial introductory and concluding chapters this important new book includes analyses based upon the author's previous research thereby providing smooth continuity and an engaging flow that follows the progression of the research The VMT project has dual goals a to provide a source of experience and data for practical and theoretical explorations of group knowledge building and b to develop an effective online environment and educational service for collaborative learning of mathematics Studying Virtual Math Teams reflects these twin orientations reviewing the intertwined aims and development of a rigorous science of small group cognition and a Web 2.0 educational math service It documents the kinds of interactional methods that small groups use to explore math issues and provides a glimpse into the potential of online interaction to promote productive math discourse
