Cytologic Detection Of Urothelial Lesions:

Cytologic Detection of Urothelial Lesions Dorothy L. Rosenthal, Stephen S. Raab, 2006-06-02 Dr Rosenthal and Dr Raab correctly place urinary cytology in the backwater of the field noting the difficulties many of us encounter when assessing urinary specimens or washes of the urinary tract. For a variety of reasons these specimens are saved for the end of the day cause the most trouble and frustration and are the least successful from the standpoint of the pathologist, the urologist or the patient. This book represents in keeping with the philosophy behind the series *Essentials in Cytopathology* a systematic description of microscopic findings in urinary specimens whether normal, reactive or neoplastic accompanied by an extensive collection of photographs in color illustrative of the full range of lesions. Drawing upon their personal collections and the diagnostic resources of several major cytologic laboratories they have assembled examples of the common diagnostic entities in the field plus an assortment of confounding circumstances which contribute to the difficulties presented by urinary specimens. Handy tables accompany the photographs offering help where needed. This is particularly relevant because the subtlety of urinary cytology deserves the dependable agnostic categorization obtained with samples from other sites.

Cytologic Detection of Urothelial Lesions DOROTHY ROSENTHAL, Stephen S. Raab, 2008-11-01 Second volume to be published in the *Essentials in Cytopathology* series. 125 full color images. User friendly and concise guide. Convenient format. Fits in lab coat pocket. 2,000 of the 22,000 practicing pathologists in the US are cytopathologists. 66,000 laboratory technicians deal with urine samples and are potential buyers. *Koss's Cytology of the Urinary Tract with Histopathologic Correlations* Leopold G. Koss, MD, FCRP, Leopold G. Koss, Rana S. Hoda, FIAC, 2012-02-07 This new volume fills the gap in the literature as it will guide urologists and pathologists in the proper utilization of a variety of laboratory methods that are currently available to determine the presence, persistence or progression of tumors of the lower urinary tract. The volume emphasizes cytology of the urinary tract which is preferred over other methods i.e. biochemical, immunological and cytogenetic for its accuracy especially for the important high grade tumors. This volume will appeal to urologists as well as pathologists, cytopathologists and related professions. The illustrations, nearly all in color, stress the key points of the text and enhance basic understanding of urothelial and other tumors of the urinary tract. *Cytopathology* Behdad Shambayati, 2018 *Cytopathology* provides a wide ranging overview of the microscopic study of normal and abnormal cells showing how current visualization methods are used to study cell structure and how early detection of abnormal cell pathology can lead to timely clinical interventions. *Cytopathology, An Issue of Surgical Pathology Clinics* Tarik El Sheikh, 2014-03-28 Topics that are essential to the surgical pathologist in cytopathology are included in this issue of *Surgical Pathology Clinics*. Topics include cytopathology of the Thyroid, Pancreas, Salivary glands, Lung, Urine, Gynecologic, Metastasis of unknown origin and Preparation techniques and Cell transfer. Expert cytopathologist and prolific author and researcher and expert clinician Tarik El Sheikh leads this issue as Guest Editor. Endometrial Cytology with Tissue Correlations John A. Maksem, Stanley J. Robboy, John W. Bishop, Isabelle Meiers, 2009-04-09 As compared with cytology s use in other organ systems direct cytological examination of the endometrium is not a widely practiced diagnostic procedure This is an anomaly because the endometrium is exceedingly available for cytological sampling cytological sampling is comparably simple to perform and from the patient s perspective it is a gentle procedure as compared to other methods of specimen attainment Over the years as we personally gained more and more experience with specimen acquisition processing and interpretation we have come to look upon endometrial cytology as an effective method for ensuring endometrial normalcy and discovering and diagnosing malignant and premalignant states In comparing endometrial cytology to endometrial biopsy we have found that in samples obtained by individuals experienced in specimen collection cytology outperforms outpatient biopsy with regard to the patient s tolerance of the procedure adequacy of sampling among postmenopausal women and detection of occult neoplasms By

devising a highly effective technical strategy to ensure the simultaneous creation of cell blocks and cytological samples from a single collection that is detailed in the technical appendix of this work we have moved endometrial brush collection into an arena of significance equaling indeed exceeding other methods of specimen collection and interpretation Cytology even in the absence of cell blocks performs equally as well as biopsy in detecting outspoken hyperplasia or carcinoma If nothing else by reliably identifying benign normal endometrial states it serves to exclude more than 70% of women from unnecessary follow up testing with a high degree of confidence Because brush sampling of the endometrium is limited to a depth of 1.5 to 2 mm the method is not definitive for the detection of endometrial polyps fibroids stromal tumors or tumors of the uterine wall musculature However endometrial cytology is useful for detecting benign estrogen excess states such as disordered proliferation and various degrees of benign hyperplasia for separating these states from frankly neoplastic states such as EIN and cancer but not for subclassifying benign hyperplastic states in the absence of cell block preparations When endometrial brushing with liquid fixation is used in conjunction with other techniques such as immunohistochemistry concomitant biopsy or more practically hysteroscopy or sonohysterography endometrial benignancy can be assured with a very high level of confidence 99% indeed manufacturing concomitant cell blocks of endometrial tissue fragments and using immunohistochemistry in selected cases significantly enhances the diagnostic specificity of the technique In a woman with a patent cervix endometrial brushing successfully collects material even from late postmenopausal atrophic endometrium It allows for the detection of serious diseases such as endometrial intraepithelial carcinoma under conditions where suction biopsy might miss or otherwise obviate the diagnosis This work focuses on the background collection technique and reliability of endometrial cytology it then overviews diagnostic criteria and diagnostic pitfalls encountered in the day to day practice of the art Since endometrial cytology interpretation relies on intuiting tissue patterns from cytology preparations a great deal of time is spent on cytohistological correlations and where effective as part of a diagnostic strategy on ancillary immunohistochemical staining The discussion moves from normal states of the endometrium through otherwise benign changes induced by an altered hormonal milieu or surface irritants into neoplastic premalignant and malignant endometrial conditions Finally fixative and slide preparation techniques that we deem as expeditious while serving to get the most information out of an endometrial cytology collection are discussed in detail for the benefit of those who wish to recapitulate our work in their own practice
