*Coping With Abundance* Martin V. Melosi, 1985-06-01      Coping with Abundance Martin V. Melosi, 1985      *Abundance* Monica L. Smith, 2017-06-15 Using case studies from around the globe including Mesoamerica North and South America Africa China and the Greco Roman world and across multiple time periods the authors in this volume make the case that abundance provides an essential explanatory perspective on ancient peoples choices and activities Economists frequently focus on scarcity as a driving principle in the development of social and economic hierarchies yet focusing on plenitude enables the understanding of a range of cohesive behaviors that were equally important for the development of social complexity Our earliest human ancestors were highly mobile hunter gatherers who sought out places that provided ample food water and raw materials Over time humans accumulated and displayed an increasing quantity and variety of goods In households shrines tombs caches and dumps archaeologists have discovered large masses of materials that were deliberately gathered curated distributed and discarded by ancient peoples The volume s authors draw upon new economic theories to consider the social ideological and political implications of human engagement with abundant quantities of resources and physical objects and consider how individual and household engagements with material culture were conditioned by the quest for abundance Abundance shows that the human propensity for mass consumption is not just the result of modern production capacities but fulfills a longstanding focus on plenitude as both the assurance of well being and a buffer against uncertainty This book will be of great interest to scholars and students in economics anthropology and cultural studies Contributors Traci Ardren Amy Bogaard Elizabeth Klarich Abigail Levine Christopher R Moore Tito E Naranjo Stacey Pierson James M Potter Fran ois G Richard Christopher W Schmidt Carol Schultze Payson Sheets Monica L Smith Katheryn C Twiss Mark D Varien Justin St P Walsh Mar a Nieves Zede o      **An Archaeology of Abundance** Kristina M. Gill, Mikael Fauvelle, Jon M. Earlandson, 2019-01-23 This volume focuses on the archaeology and historical ecology of a series of islands located off the Pacific Coast of Alta and Baja California from the Channel Islands to Cedros Island      Greenhouse: Coping with Climate Change WJ Bouma, GI Pearman, MR Manning, 1996-01-01 Consideration of climate change deals increasingly with impacts and responses and therefore involves a wide range of technical issues and a diverse community of experts One of the challenges faced is that of ensuring effective communication between these different areas of expertise For example climate change studies require new types of collaboration between carbon cycle modellers and economists and between meteorologists and coastal geomorphologists Furthermore there is a need to distil balanced assessments ranging across many disciplines for the benefit of all policymakers Greenhouse Coping with Climate Change brings together the contributions of many experts to the climate change debate This book is a landmark publication summarising our understanding of climate change issues as they affect Oceania It contains review papers that report on the status of knowledge methodologies and developments and a selection of focused papers that expand on specific issues and present

significant new developments of wide general interest and relevance to the region      *The Principle of Equal Abundance*  
Steven S. Coughlin Ph.D.,2007-12-04 This book has explored what a divine principle of equal abundance might look like and what implications it might have for human beings including our connectedness to a loving and benevolent God our connectedness to each other our personal growth health and well being and our place in the natural world Although these issues have great importance for our survival and well being as individuals and as a species divine principles such as Gods love and equal abundance do not allow us to predict with precision what is in store for human beings in the future

Billington,Donald C. Jackson,2017-04-20 The massive dams of the American West were designed to serve multiple purposes improving navigation irrigating crops storing water controlling floods and generating hydroelectricity Their construction also put thousands of people to work during the Great Depression

Only later did the dams baneful effects on river ecologies spark public debate Big Dams of the New Deal Era tells how major water storage structures were erected in four western river basins David P Billington and Donald C Jackson reveal how engineering science regional and national politics perceived public needs and a river s natural features intertwined to create distinctive dams within each region In particular the authors describe how two federal agencies the Army Corps of Engineers and the Bureau of Reclamation became key players in the creation of these important public works By illuminating the mathematical analysis that supported large scale dam construction the authors also describe how and why engineers in the 1930s most often opted for massive gravity dams whose design required enormous quantities of concrete or earth rock fill for stability Richly illustrated Big Dams of the New Deal Era offers a compelling account of how major dams in the New Deal era restructured the landscape both politically and physically and why American society in the 1930s embraced them wholeheartedly
