9th Usenix Security Symposium:

ICCWS2014- 9th International Conference on Cyber Warfare & Security Dr. Sam Liles, 2014-03-24 **Proceedings of the Third International Symposium on Human Aspects of Information Security & Assurance (HAISA 2009)**, 2009

Information and Communications Security Robert H. Deng, Feng Bao, Jianying Zhou, 2003-08-02 This volume contains the proceedings of the 4th International Conference on Information and Communications Security ICICS2002. The three previous conferences were held in Beijing ICICS97, Sydney ICICS99 and Xian ICICS01 where we had an enthusiastic and well attended event. ICICS2002 is sponsored and organized by the Laboratories for Information Technology Singapore in co operation with the Engineering Research Center for Information Security Technology of the Chinese Academy of Sciences and the International Communications and Information Security Association ICISA. During the past few years the conference has placed equal emphasis on the theoretical and practical aspects of information and communications security and has established itself as a forum at which academic and industrial people meet and discuss emerging security challenges and solutions. We hope to uphold this tradition by offering you yet another successful meeting with a rich and interesting program. The response to the Call For Papers was overwhelming 161 paper submissions were received. Therefore the paper selection process was very competitive and difficult only 41 papers were accepted and many good papers had to be rejected. The success of the conference depends on the quality of the program. We are indebted to our program committee members and the external referees for the wonderful job they did.

Phishing and Countermeasures Markus Jakobsson, Steven Myers, 2006-12-05 Phishing and Counter Measures discusses how and why phishing is a threat and presents effective countermeasures. Showing you how phishing attacks have been mounting over the years how to detect and prevent current as well as future attacks this text focuses on corporations who supply the resources used by attackers. The authors subsequently deliberate on what action the government can take to respond to this situation and compare adequate versus inadequate countermeasures.

Applied Cryptography and Network Security Markus Jakobsson, Moti Yung, Jianying Zhou, 2004-05-17 The second International Conference on Applied Cryptography and Network Security ACNS 2004 was sponsored and organized by ICISA the International Communications and Information Security Association. It was held in Yellow Mountain China June 8-11 2004. The conference proceedings representing papers from the academic track are published in this volume of the Lecture Notes in Computer Science LNCS of Springer Verlag. The area of research that ACNS covers has been gaining importance in recent years due to the development of the Internet which in turn implies global exposure of computing resources. Many fields of research were covered by the program of this track presented in this proceedings volume. We feel that the papers herein indeed reflect the state of the art in security and cryptography research worldwide. The program committee of the conference received a total of 297 submissions from all over the world of which 36 submissions were selected for presentation during the academic track. In addition to this track the conference also hosted a technical industrial track of presentations that were

carefully selected as well All submissions were reviewed by experts in the relevant areas *Information Security* Juan Garay,2007-09-20 This book constitutes the refereed proceedings of the 10th International Conference on Information Security Conference ISC 2007 Coverage in the 28 revised full papers presented includes intrusion detection digital rights management symmetric key cryptography cryptographic protocols and schemes identity based schemes cryptanalysis DoS protection software obfuscation public key cryptosystems elliptic curves and applications and security issues in databases

ECIW2012- 11th European Conference on Information warfare and security Robert Erra,2012 **Operating System Security** Trent Jaeger,2022-05-31 Operating systems provide the fundamental mechanisms for securing computer

processing Since the 1960s operating systems designers have explored how to build secure operating systems operating systems whose mechanisms protect the system against a motivated adversary Recently the importance of ensuring such security has become a mainstream issue for all operating systems In this book we examine past research that outlines the requirements for a secure operating system and research that implements example systems that aim for such requirements For system designs that aimed to satisfy these requirements we see that the complexity of software systems often results in implementation challenges that we are still exploring to this day However if a system design does not aim for achieving the secure operating system requirements then its security features fail to protect the system in a myriad of ways We also study systems that have been retrofit with secure operating system features after an initial deployment In all cases the conflict between function on one hand and security on the other leads to difficult choices and the potential for unwise compromises From this book we hope that systems designers and implementors will learn the requirements for operating systems that effectively enforce security and will better understand how to manage the balance between function and security
