ABSTRACT: Generalizing the graded commutator in superalgebras, we propose a new bracket operation on the space of graded operators with an involution. We show that the Lax representation of the two-dimensional $N=(1|1)$ supersymmetric Toda lattice hierarchy can be realized via the generalized bracket operation; this is important in constructing the semiclassical (continuum) limit of this hierarchy. We construct the continuum limit of the $N=(1|1)$ Toda lattice hierarchy, the dispersionless $N=(1|1)$ Toda hierarchy. In this limit, we obtain the Lax representation, with the generalized graded bracket becoming the corresponding Poisson bracket on the graded phase superspace.

1. Introduction

An integrable $N=(1|1)$ supersymmetric generalization of the two-dimensional bosonic Toda lattice hierarchy (2DTL hierarchy) [1] was proposed in [2], [3]. It is given by an infinite system of evolution equations (flows) for an infinite set of bosonic and fermionic lattice fields evolving in two bosonic and two fermionic infinite “towers” of times; as a subsystem, it involves an $N=(1|1)$ supersymmetric integrable generalization of the 2DTL equation, which is called the $N=(1|1)$ 2DTL in what follows.

Two new infinite series of fermionic flows of the $N=(1|1)$ 2DTL hierarchy were constructed in [4]–[6]. This hierarchy was shown to actually have a higher symmetry, namely, the $N=(2|2)$ supersymmetry. Together with the previously known bosonic flows of the $N=(1|1)$ 2DTL hierarchy, these flows are symmetries of the $N=(1|1)$ 2DTL equation. The continuum limit of that equation with respect to the lattice constant [7] is a three-dimensional nonlinear equation, called the continuum or dispersionless $N=(1|1)$ 2DTL equation.
