Contributions To Analysis A Collection Of Papers Dedicated To Lipman Bers:

Contributions to Analysis Lars V. Ahlfors, Irwin Kra, Bernard Maskit, 2014-05-10 Contributions to Analysis A Collection of Papers Dedicated to Lipman Bers is a compendium of papers provided by Bers friends students colleagues and professors These papers deal with Teichmüller spaces Kleinian groups theta functions algebraic geometry Other papers discuss quasiconformal mappings function theory differential equations and differential topology One paper discusses the results of the rigidity theorem of Mostow and its generalization by Marden in relation to geometric properties of Kleinian groups of the first kind These results obtained by planar methods are presented in terms of the hyperbolic 3 space language which is a natural pedestal in approaching the action of the Kleinian groups Another paper reviews Riemann's vanishing theorem which solves the Jacobi inversion problem by relating the vanishing properties of the theta function particularly at half periods to properties of certain linear series on the Riemann surface One paper examines the problem of obtaining relations among the periods of the differentials of first kind on a compact Riemann surface An application of a computer program involves supersonic transport The program is based on the hodograph transformation and a method of complex characteristics to calculate profiles that are shock less at a specified angle of attack or at a specified subsonic free stream Mach number The collection can prove useful for engineers statisticians students and professors in advance mathematics or courses related to aeronautics

Contributions to Analysis Lars Valerian Ahlfors, 1974-01-01 [Selected Works of Lipman Bers](#) Lipman Bers, 1998 **Lipman Bers, a Life in Mathematics** Linda Keen, Irwin Kra, Rubí E. Rodríguez, 2015-09-15 The book is part biography and part collection of mathematical essays that gives the reader a perspective on the evolution of an interesting mathematical life It is all about Lipman Bers a giant in the mathematical world who lived in turbulent and exciting times It captures the essence of his mathematics a development and transition from applied mathematics to complex analysis quasiconformal mappings and moduli of Riemann surfaces and the essence of his personality a progression from a young revolutionary refugee to an elder statesman in the world of mathematics and a fighter for global human rights and the end of political torture The book contains autobiographical material and short reprints of his work The main content is in the exposition of his research contributions sometimes with novel points of view by students grand students and colleagues The research described was fundamental to the growth of a central part of 20th century mathematics that now in the 21st century is in a healthy state with much current interest and activity The addition of personal recollections professional tributes and photographs yields a picture of a man his personal and professional family and his time **Algebraic**

Integrability, Painlevé Geometry and Lie Algebras Mark Adler, Pierre van Moerbeke, Pol Vanhaecke, 2013-03-14 This Ergebnisse volume is aimed at a wide readership of mathematicians and physicists graduate students and professionals The main thrust of the book is to show how algebraic geometry Lie theory and Painlevé analysis can be used to explicitly solve integrable differential equations and construct the algebraic tori on which they linearize at the same time it is for the student

a playing ground to applying algebraic geometry and Lie theory The book is meant to be reasonably self contained and presents numerous examples The latter appear throughout the text to illustrate the ideas and make up the core of the last part of the book The first part of the book contains the basic tools from Lie groups algebraic and differential geometry to understand the main topic Selected Works of Phillip A. Griffiths with Commentary Phillip Griffiths, 2003 Containing four parts such as Analytic Geometry Algebraic Geometry Variations of Hodge Structures and Differential Systems that are organized according to the subject matter this title provides the reader with a panoramic view of important and exciting mathematics during the second half of the 20th century Classical Algebraic Geometry Igor V. Dolgachev, 2012-08-16 Algebraic geometry has benefited enormously from the powerful general machinery developed in the latter half of the twentieth century The cost has been that much of the research of previous generations is in a language unintelligible to modern workers in particular the rich legacy of classical algebraic geometry such as plane algebraic curves of low degree special algebraic surfaces theta functions Cremona transformations the theory of apolarity and the geometry of lines in projective spaces The author's contemporary approach makes this legacy accessible to modern algebraic geometers and to others who are interested in applying classical results The vast bibliography of over 600 references is complemented by an array of exercises that extend or exemplify results given in the book **Riemann Surfaces and Related Topics** Irwin Kra, Bernard Maskit, 1981-05-21 The description for this book Riemann Surfaces Related Topics AM 97 Volume 97 Proceedings of the 1978 Stony Brook Conference AM 97 will be forthcoming *Discrete Groups in Space and Uniformization Problems* B. Apanasov, 1991-06-30 A revised and substantially enlarged edition of the Russian book Discrete transformation groups and manifold structures published by Nauka in 1983 this volume presents a comprehensive treatment of the geometric theory of discrete groups and the associated tessellations of the underlying space Also dealt with in depth are geometric and conformal structures on manifolds with particular emphasis on hyperbolic n dimensional manifolds A detailed account of the geometric and analytic properties of geometrically finite Mobius groups in n dimensional space is given and this forms the basis of the subsequent analysis Emphasis is placed on the geometrical aspects and on the universal constraints which must be satisfied by all tessellations and structures on manifolds Annotation copyrighted by Book News Inc Portland OR **Hyperbolic Manifolds** Albert Marden, 2016-02 This study of hyperbolic geometry has both pedagogy and research in mind and includes exercises and further reading for each chapter **Handbook of Pseudo-Riemannian Geometry and Supersymmetry** Vicente Cortés, 2010 The purpose of this handbook is to give an overview of some recent developments in differential geometry related to supersymmetric field theories The main themes covered are Special geometry and supersymmetry Generalized geometry Geometries with torsion Para geometries Holonomy theory Symmetric spaces and spaces of constant curvature Conformal geometry Wave equations on Lorentzian manifolds D branes and K theory The intended audience consists of advanced students and researchers working in differential geometry string theory and

related areas The emphasis is on geometrical structures occurring on target spaces of supersymmetric field theories Some of these structures can be fully described in the classical framework of pseudo Riemannian geometry Others lead to new concepts relating various fields of research such as special Kahler geometry or generalized geometry

Outer Circles A. Marden, 2007-05-31 We live in a three dimensional space what sort of space is it Can we build it from simple geometric objects The answers to such questions have been found in the last 30 years and Outer Circles describes the basic mathematics needed for those answers as well as making clear the grand design of the subject of hyperbolic manifolds as a whole The purpose of Outer Circles is to provide an account of the contemporary theory accessible to those with minimal formal background in topology hyperbolic geometry and complex analysis The text explains what is needed and provides the expertise to use the primary tools to arrive at a thorough understanding of the big picture This picture is further filled out by numerous exercises and expositions at the ends of the chapters and is complemented by a profusion of high quality illustrations There is an extensive bibliography for further study

The Geometry of Riemann Surfaces and Abelian Varieties José María Muñoz Porras, 2006 Most of the papers in this book deal with the theory of Riemann surfaces moduli problems automorphisms etc abelian varieties theta functions and modular forms Some of the papers contain surveys on the recent results in the topics of current interest to mathematicians whereas others contain new research results

The Geometry of Cubic Hypersurfaces Daniel Huybrechts, 2023-06-29 A detailed introduction to cubic hypersurfaces applying diverse techniques to a central class of algebraic varieties

Geometry, Groups and Dynamics C. S. Aravinda, William M. Goldman, Krishnendu Gongopadhyay, Alexander Lubotzky, Mahan Mj, Anthony Weaver, 2015-05-01 This volume contains the proceedings of the ICTS Program Groups Geometry and Dynamics held December 3-16 2012 at CEMS Almora India The activity was an academic tribute to Ravi S Kulkarni on his turning seventy Articles included in this volume both introductory and advanced surveys represent the broad area of geometry that encompasses a large portion of group theory finite or otherwise and dynamics in its proximity These areas have been influenced by Kulkarni's ideas and are closely related to his work and contribution

Conformal Geometry of Discrete Groups and Manifolds Boris N. Apanasov, 2011-06-24 The aim of the Expositions is to present new and important developments in pure and applied mathematics Well established in the community over more than two decades the series offers a large library of mathematical works including several important classics The volumes supply thorough and detailed expositions of the methods and ideas essential to the topics in question In addition they convey their relationships to other parts of mathematics The series is addressed to advanced readers interested in a thorough study of the subject Editorial Board Lev Birbrair Universidade Federal do Cear Fortaleza Brasil Walter D Neumann Columbia University New York USA Markus J Pflaum University of Colorado Boulder USA Dierk Schleicher Jacobs University Bremen Germany Katrin Wendland University of Freiburg Germany Honorary Editor Victor P Maslov Russian Academy of Sciences Moscow
